

**Data Sheet** 

# EvoFlat 4.0 W

EvoFlat 4.0 W is a Flat station for instantaneous domestic hot water. The Flat station is for mouinting in to a recess box, or direct on the wall.

### Application

The EvoFlat 4.0 W Flat station is easy to install, maintain and use.

It is particularly suitable for multi family buildings, with central or district heating.

#### Construction

The innovative EvoFlat 4.0 W sets a new standard. Its 'body' is made from special reinforced PPS composite. This makes the station extremely lightweight and limits internal heat emission. The smooth surface significantly reduces the risks of scaling and clogging.

All components are mounted with newly designed click-fit connections. Compared to conventional stations with lots of pipes and screw connections, this new connection technology does not require retightening during installation. The size, connection order and distances between the stainless-steel connection pipes is compatible with the existing EvoFlat program.

#### Domestic hot water (DHW)

The DHW capacity is determined by the amount of plates on the built-in Heat Exchanger. 4 types are available to cover every requirement, from 37 up to 80 kW.

A special built-in flow actuator allows primary and secondary side flow through the heat exchanger, only when hot water is tapped. It blocks the flow immediately after completion of the tapping process.

The Evoflat 4.0 W is characterized by an intelligent controller taking both flow volume and flow temperature into account. This self-acting thermostatic flow controller with integrated differential

pressure controller ensures accurate and stable water temperatures and optimized hydronic balance among all stations connected to the same heating source.

For registration of the water consumption the EvoFlat 4.0 W is equipped with a fitting piece for mounting of a coldwater meter in the PWC inlet.

If necessary, it is possible to expand the station with a hot water circulation set.

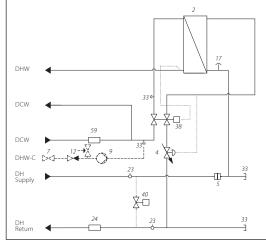

#### Insulation

The EvoFlat 4.0 W has a high insulation EPP cover. It is built up on an EPP insulated back plate and a few front insulation covers for the DHW, and mounting rail. This ensures the EvoFlat 4.0 W is fully insulated for minimum heat losses and excellent operating economy.

## ENGINEERING TOMORROW

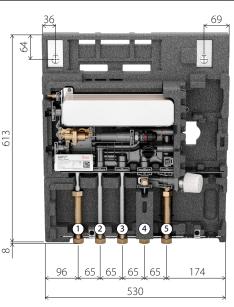

## **CIRCUIT DIAGRAM (EXAMPLE)**

#### **Technical specifications:**

Nominal pressure:	PN 10
Max. supply temperature:	95 °C
DCW static Cold water pressure:	$P_{min} = 1,5 \text{ bar}$
Brazing (HEX):	Copper or Stainless steel
Weight excl. cover:	8,5 kg
Insulation:	EPP λ 0,039
Electrical supply:	230 V AC
Dimensions (mm):	$\rm H613{\times}W530{\times}D150$
Connections sizes:	G ¾" IT (int. thread)

#### 2 Plate heat exchanger DHW

- Differential pressure controller
- 4 5 Stainer
- Ball valve 7
- 9 DHW circulation set with safety valve 12 Safety valve
- 17 Air vent
- 23 Sensor pocket
- 24 Fitting piece for energy meter  $3/4'' \times 110 \text{ mm}$
- 38 Hot Water Controller
- 40
- Summer By-pass Fitting piece for water meter 3/4" × 110 mm 59

#### **Connections:**

- 1. Domestic cold water (DCW) inlet
- 2. Domestic hot water (DHW)
- 3. Domestic cold water (DCW) outlet
- 4. Heating (HE) supply
- 5. Heating (HE) return

#### **DHW: CAPACITY EXAMPLES** DHW Flow rate Pressure loss Tap load Temperature Unit type HEX capacity DHS/DHR Primary Primary\* . 50°C .
