Motorized control valves

Let motorized intelligence solve your **application challenges**

For HVAC, central heating, district heating and cooling systems.

More than **100,000** Danfoss MVCs have been installed globally over the past two years.

Perfect control and efficiency for every building and application

Based on decades of experience, changing customer needs and global energy-efficiency trends, we are developing the motorized control technology of tomorrow. Danfoss Motorized Control Valves (MCV) for district heating and cooling, HVAC and central heating systems ensure stable and accurate control of water, glycol mixtures and steam. This in turn improves temperature control and reliability while increasing the energy efficiency of the system. All of which adds up to enhanced comfort for the end-user.

The MCV range comprises both regular and pressure-relieved control valves designed to operate in the most demanding applications.

Danfoss Commercial Controls offers a comprehensive range of control valves and actuators for virtually every application: central and decentralized heating systems, domestic hot-water systems, district heating and steam.

For maximum versatility, our control valves and actuators come in different sizes, materials and connection options. They also offer a range of different functions and features to suit each specific application.

With a global reputation for quality and reliability, our latest solutions are available at different price points to suit the budgetary needs of every project.

The benefits of choosing Danfoss Motorized Control Valves

Years of customer insights and product development for district heacting, HVAC and central heating applications have enabled us to create a flawless product that perfectly complies with all current requirements and future trends. Here are some of the highlights.

Excellent control performance

The control capabilities of the MCV range are based on different characteristics, including split characteristics for DHW applications using heat exchangers, as well as linear and logarithmic characteristics. This means that even the most difficult control requirements in district heating can be met, while still providing instantaneous hot water.

For DHW systems, the low slope of the split characteristic in this part of the stroke ensures stable control of the valve in the critical area near the closing position. On the other hand, the steeper part of the curve (large flow) enables fast and stable control.

Features

- » Anti-oscillation
- » Control ratio
- » Stroke limitation
- » Split characteristics
- » Modification of controls
- characteristic (65X actuators)

Proven **lifetime cost** effectiveness

Thanks to easy selection, installation, commissioning and maintenance, Danfoss MCVs simply cost you less time, money and effort.

Your benefits at a glance

- » Auto detection of control signal
- » Speed selection
- » LED signalization
- » Option to operate as either 3-point or modulating
- » Fast connection
- » Easy wiring procedure
- » Free positioning
- » Anti-oscillation function
- » Split characteristic of DHW valves

Increased reliability and operational safety

All new products feature built-in thermic and overload protection of the electromotor. This radically reduces the risk of operational failure in either the valve or the system as a whole.

Features

Features

» LED signalization

- » Thermic and overload protection
- » Direct inverse functionality

Easy handling and installation

Danfoss MCVs are easy to handle, easy to operate and easy to understand. Quick connection to actuator and valve is enabled by a threaded coupling, which also allows for rotation after mounting. External LED visualization and signaling save time and effort during installation and commissioning of MCVs.

» Easy wiring with the option to prewire the actuators » Selectable features available on jumpers

» 360° installation without compromising IP » Top-down and side-in mounting of actuator - compact design

» 360° installation without compromising IP » Safety function (TUV certified) – Spring up (SU), Spring down (SD)

...one of the reasons why our customers stay with us for decades

Danfoss

Long-lasting quality to the core Danfoss valves

System reliability, building and occupant safety are crucial when it comes to district heating and cooling applications. This is why we give special attention to design and material selection used in our products. Valve bodies are made of high quality red bronze and cast iron or steel. Critical internal parts are made from well-proven stainless steel 1.4404 / 1.4571 / 1.4021. In combination with a specially designed valve seat and cone, this ensures resistance to cavitation and corrosion. Danfoss products will ensure trouble-free operation, low maintenance and operational costs.

About Danfoss

For more than 75 years Danfoss has been supplying innovative heating solutions that cover everything from individual components to complete district heating systems. Danfoss engineers technologies that enable the world of tomorrow to do more with less. We employ 42,000 people and serve customers in more than 100 countries. Driven by our customers' needs, we build on years of experience to be at the forefront of innovation, continually supplying components, expertise and complete systems for climate and energy applications.

Today, our advanced, reliable and user-friendly technology helps to keep people comfortable and companies competitive across the world.

We play an active role in the main growth themes in a world that is rapidly changing: infrastructure, food, energy and climate are the focus of our business. Cities for millions that touch the sky. A richer harvest to feed a growing world. Keeping food fresh and our children warm in a world that can make more out of less. This is how we are Engineering Tomorrow.
