# **RAS-C<sup>2</sup> Range** Radiator Thermostats for Domestic 2-Pipe Systems

#### Application

RAS-C<sup>2</sup> radiator thermostats are designed for use in 2-pipe domestic heating systems.

All RAS-C<sup>2</sup> Combi Packs comprise of a RA-FS angled or straight pattern bi-directional valve and a RAS-C<sup>2</sup> sensor designed for 2-pipe heating systems.

Combi Packs are also available with a RLV-D lockshield valve. For further data on the lockshield valve please see separate RLV-D data sheet.

The valves have a  $\frac{1}{2}$ " BSP (R $\frac{1}{2}$ ") tail piece connection to the radiator and are available with 15mm, 10mm or 8mm compression fitting or an elbow with 10mm push-fit fitting to connect the valve to the pipe work. The valve bodies are reversible and bi-directional and include a flow-selectable feature to ensure trouble free installation without any risk of water hammer. For optimum performance, Danfoss recommend the sensor be mounted horizontal where at all possible.

Danfoss

The valve is supplied with a protective cap, which can be used for manual regulation during the construction phase. The cap must not be used as a manual shut of device.

RAS-C<sup>2</sup> sensors incorporate a "Frost Protection" setting and a "Positive Off" feature for maximum user flexibility. Temperature range is from  $8^{\circ}$ C to  $28^{\circ}$ C.

<sup>1)</sup> RA-FS valves must only be used with RAS- $C^2$  or RAS-D sensors.

<sup>2)</sup> As with any device which imposes a pressure drop in the system, noise may occur under certain flow/ pressure conditions. To ensure quiet operation, maximum pressure drop should not exceed 45 kPa (0.45 bar). The differential pressure can be reduced using Danfoss automatic by-pass valve AVDO.

<sup>3)</sup> Only available in Combi packs.

The push-fit fitting is suitable for 10 mm copper pipes manufactured in accordance to BS 2871 part 1 / BS EN 1057 : 1996 and suitable for 10 mm polybuthelene (PB) including Hep<sub>2</sub>O, Polyplumb, OsmaGold and 10 mm cross linked polyethylene (PEX) pipes made in accordance to BS 7291 part 1 : 1990 or part 3 : 1990. Always use plastic pipe inserts of the same brand as the pipe used.

Approved to EN 215

All Danfoss RAS-C2<sup>2</sup> sensors and RA-FS valves are manufactured to the highest standards and are approved to the European standard EN 215, which supersedes BS 6284, 1983.

**Quality Standards** 

All Danfoss radiator thermostats and valves are manufactured in factories, assessed and certified by BSI against ISO 9001 / BS 5750.

## RAS-C<sup>2</sup> Range - Radiator Thermostats for Domestic 2-Pipe Systems

#### Capacities

All RAS-C<sup>2</sup> Combi: capacity with P-band between 0.5K and 3K

#### Construction

- 1. Actuator
- 2. Setting dial
- 3. Safety spring
- 4. Gland seal
- 5. Pressure pin Securing union nut
- 6. 7. Spindle
- 8.
- **Bi-directional valve cone** 9. Revolver
- 10. Valve body

Water in the heating system must be in accordance with the British Standard "Code of Practise". Should water treatment be used it is essential that dosing of the manufacturer are strictly observed. It is recommended that formulations containing mineral oil are avoided.

RAS-C<sup>2</sup> Range - Radiator Thermostats for Domestic 2-Pipe Systems

#### **Valve Setting**

#### Commissioning the valve

The valve is a bi-directional valve with a flow direction selection feature. This feature does not have to be used, although we recommend that it is set during system commissioning.

- Establish the flow direction through the valve using the diagrams above, turning the setting ring as necessary to ensure that water flow through the valve is always in the correct direction and the risk of water hammer is eliminated.
- If the flow direction needs to be changed there is no need to remove the valve, simply turn the setting ring.
