BasicClip with Insulation Overlap Panels

Application

The Basic insulation overlap panels 20 and 35 mm are 2 m² (folded 1+1 m) and serve as heat and sound insulation. The surface of the insulation overlap panel is durable, can be walked on and forms a good base for the BasicClip system. The panels are easy to install and the strong foil forms a technically sound base for cement and floating screed. To compensate for pipes on the floor and for deeper insulation a double layer is used, e.g. with EPS 040 DEO 20 mm. The grid shown in the illustration is 5 cm and the Danfoss composite pipe 16 x 2 mm is used.
