2018-11-14 | **Installation on multi-user systems**

Coolselector®2 Server Installation Guide

Easy and time saving calculation and component selection.

We did complex **– you do awesome**

System requirements

Coolselector®2 runs on Microsoft Windows 7 or later. In case you need to install Coolselector®2 on computers configured differently, you have two options:

1. Use http://coolselectoronline.danfoss.com for an online experience.
2. Contact us at coolselector@danfoss.com for installation support on older configurations.

Multi-user systems

Coolselector®2 should only be installed on multi-user systems by qualified personnel. The command-line switches for the setup program listed below might be useful for such installations:

- `/VERYSILENT`
  No message boxes, confirmations, etc.

- `/MERGETASKS="!desktopicon,!startmenu"`
  No icons in start menu or on desktop

- `/DIR="x:\dirname"`
  Overrides the default directory name. A fully qualified pathname must be specified.
  May include an `"expand:"` prefix which instructs Setup to expand any constants in the name. For example: `"/DIR=expand:"{pf}\My Program""` will install into `"Program files (x86)\My Program"` folder.

- `/NoAutoUpdate`
  Prevents Coolselector®2 from trying to automatic check for updates

Command line example:
```
setup.exe /VERYSILENT/MERGETASKS="!desktopicon,!startmenu"
/DIR="c:\Coolselector2" /NoAutoUpdate
```
