

THE
**GREEN
 RESTART**
 SERIES

Making **building renovations** the driver of the Green Restart

We have the solutions ready today to unleash massive energy savings potential in buildings, whilst also reducing their emissions and driving a green restart to the economy.

40%
 of global energy use is attributed to buildings

Make basic changes for **big results**

Danfoss has a full portfolio of energy efficient solutions to support optimisation of energy use in buildings.

Increase your impact with **hydronic balancing**

Our **Danfoss AB-QM Pressure Independent Control Valve** digitalises and balances the whole system automatically.

Tap into the potential of **district energy**

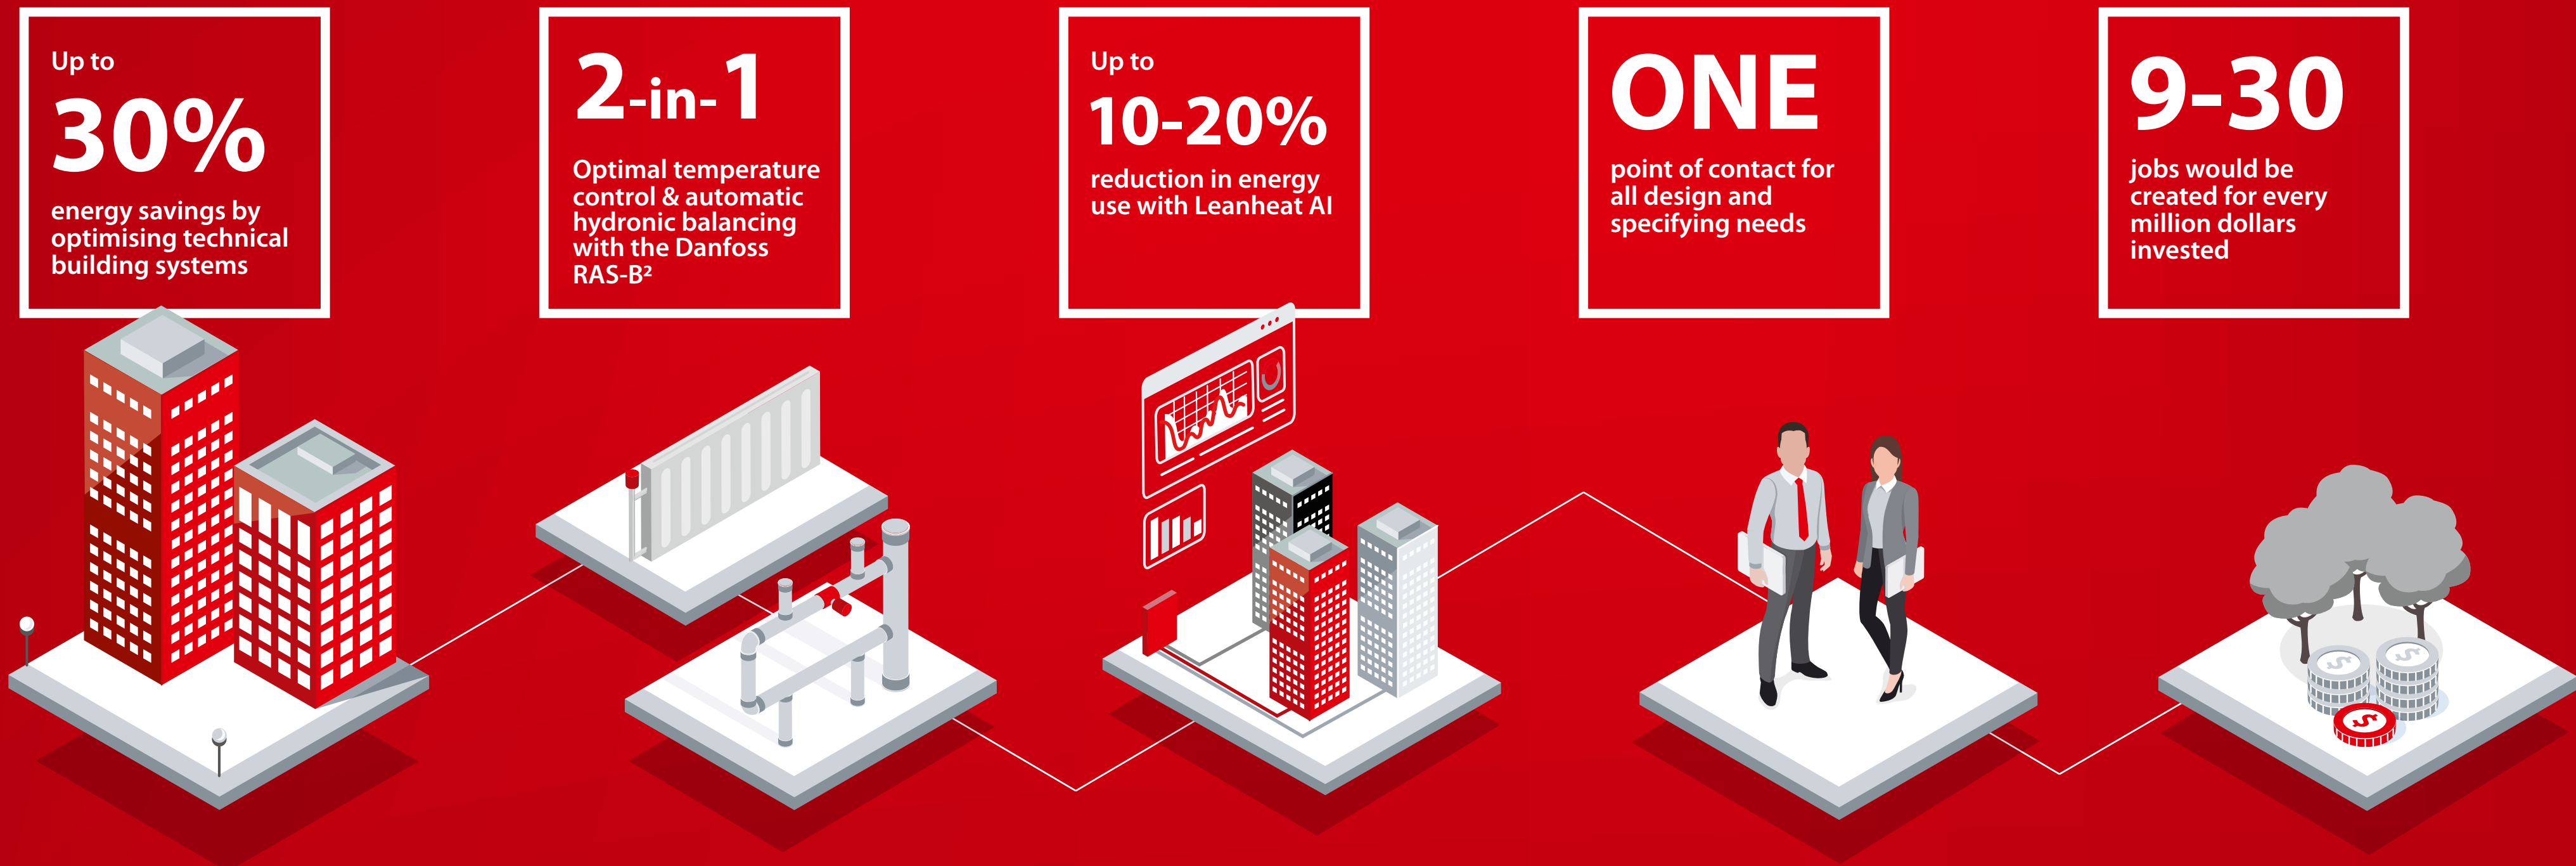

By connecting buildings with district energy solutions and AI, we can lower energy use and reduce inefficient individual heat generation.

Our expertise can **boost your business**

Our Digital Design Center and smart implementation tools ensure that specification and installation are fast and easy.

A **win-win** opportunity for you

From shorter installation times, to lower running costs and higher building value, these solutions are a win-win for your business and for the climate.

Where to **learn more?**

■ Visit the **green restart hub** for more inspiration

■ Discover our **digital tools** that make specification easy

■ See how we make the lives of installers better and easier with our **Installer app**
