

Data sheet

Oil Nozzles Types HFD/HD and SFD/SD

Application

Oil nozzles types HFD/HD and SFD/SD are designed for domestic and commercial high pressure oil burners operating with light or heavy fuel.

The steel nozzles are available with hollow or solid spray pattern in 3 different spray angles with capacities from 0.3 to 2.50 USgal/h.

The types HFD and SFD have two sintered bronze filters while the types HD and SD only have one filter of sintered bronze or monel mesh.

Features:

- Light and heavy oil
- EN nozzles from 1.50 to 6.55 kg/h
- 100% test of capacity and performance

Identification

The nozzles are marked with the following information (example):

Stamped on the flats	
0.60	Reference capacity (USgal/h)
60° SFD	Spray angle and pattern (S = solid, H = Hollow, F = Double filter)
2.24	EN specified capacity (kg/h)
EN 60 I	Spray angle & Angle index (according to EN 293/EN 299)
EN specification point	1000 kPa (10 bar), 3.4 cSt., 840 kg/m ³
	Batch no. for internal use
Reference specification point	700 kPa (7 bar), 2.7 cSt., 820 kg/m ³

Design

Types HFD and SFD with double sinter filter

- A:** Nozzle housing
B: Nozzle cone
C: Inner filter (secondary)
D: External filter (primary)

Types HD and SD with single filter (example with external filter)

- E:** Nozzle housing
F: Nozzle cone
G: Locknut
H: Filter

Spray angles/patterns

Technical Data

Tightening torques	
Recommended tightening torque	25 to 30 Nm (2.5 to 3.0 kpm)
Max. tightening torque	35 Nm (3.5 kpm)
