Data sheet

Manual presetting valve MSV-F2, PN 16/25, DN 15 - 400

Description

MSV-F2 DN 15-150

MSV-F2 DN 200-400 (PN 16)

MSV-F2 DN 200-400 (PN 25)

MSV-F2 valves are manual presetting valves with flanged connections. They are used for balancing the flow in heating and cooling installations.

The valves have a position indicator and stroke limiter as standard. The hand wheel of the valve is integrated with the stroke limiter.

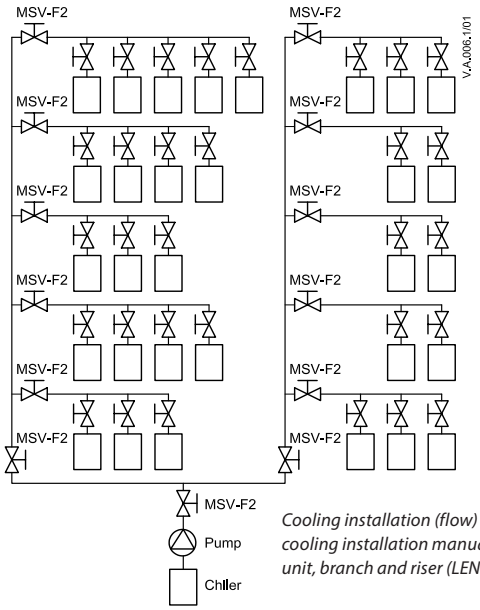
The setting can be locked. Valve characteristics are set up in measuring device PFM 1000/PFM 100. Valves are free of asbestos.

Shut-off function.

Main data:

- DN 15-400
- PN 16:
  - Flow temperature: –10 °C … 130 °C
- PN 25:
  - Flow temperature: –10 °C … 150 °C
- Valves can be mounted in the supply or return pipe.

Application



Cooling installation (flow) with manual presetting valves. In order to balance the cooling installation manual presetting valves should be mounted on each terminal unit, branch and riser (LENO™ MSV-BD).

Ordering

MSV-F2 DN 200-400 (PN16)

Setting

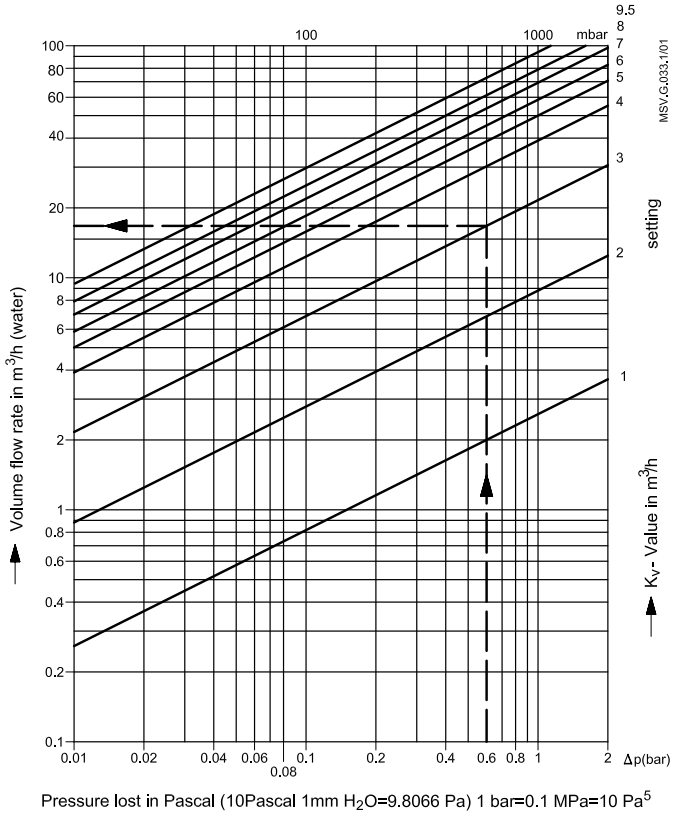
Ethylenglycol correction factor

Formula: $C_2H_6O_2$
Density at 20 °C: $\rho_{water} = 1$ kg/dm³
$\rho_{glycol} = 1.338$ kg/dm³

$$Q_{corr.} = \frac{Q_{water}}{\sqrt{\text{Share of water} \times \rho_{water} + \text{Share of glycol} \times \rho_{glycol}}}$$

Ethylenglycol part xg (%)	0	10	20	30	40	50	60	70	80	90	100
Correction factor	1.0	0.983	0.968	0.953	0.939	0.925	0.912	0.899	0.887	0.876	0.864

MSV-F2 DN 65
Δp = 0.6 bar
Hand wheel setting: 3.0
Flow: 16.8 m³/h
30 % glycol
$Q_{corr.}$ = 16.8 m³/h × 0.953 = 16.0 m³/h
It refers to all types of valves.

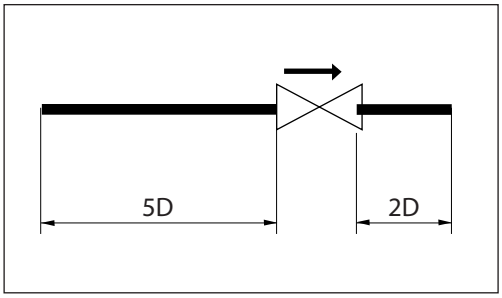


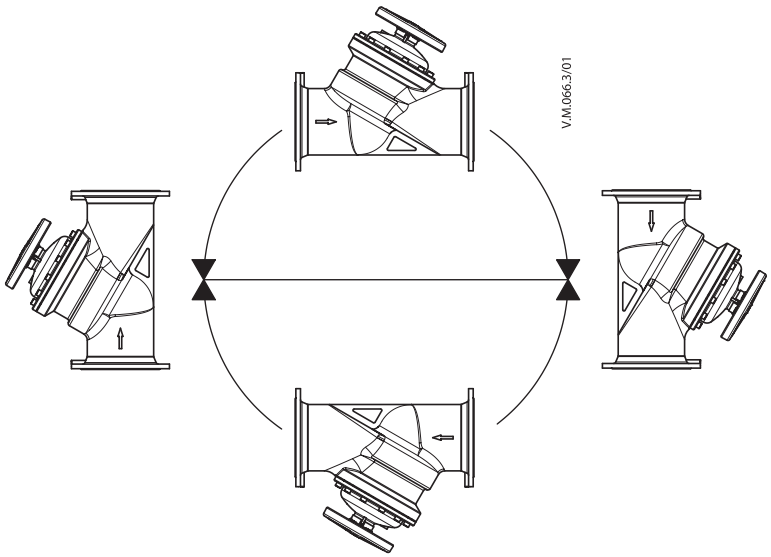
Pressure lost in Pascal (10Pascal 1mm H_2O=9.8066 Pa) 1 bar=0.1 MPa=10 Pa[5]

Installation

Always install the valve with the arrow on the body in the same direction as the flow. In order to avoid turbulence, which will affect the measuring accuracy, it is recommended to have a straight length of pipe up and down stream from the valve as shown (D - diameter of pipe).

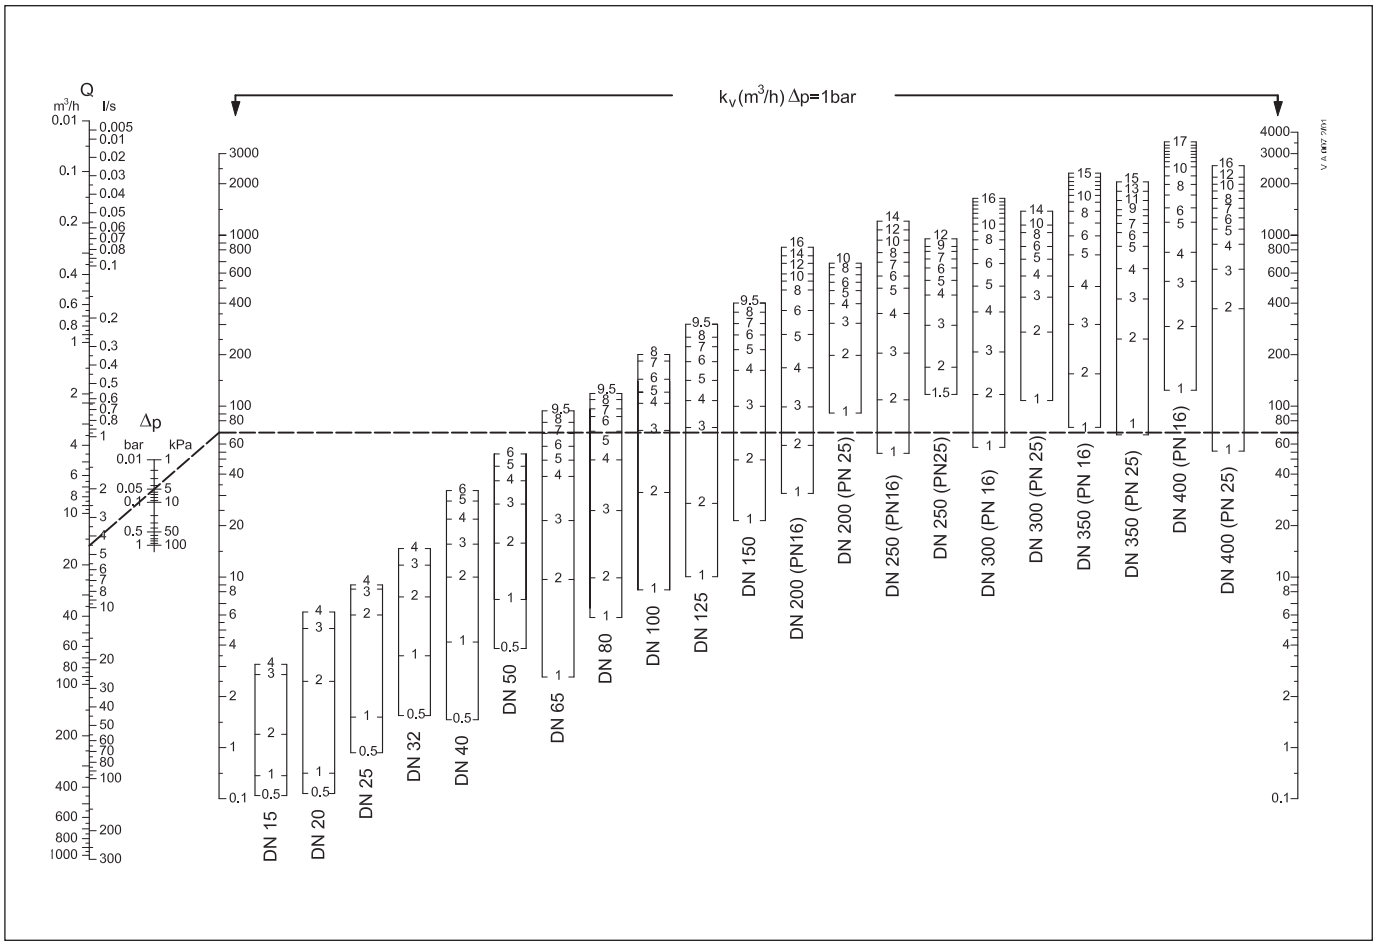
The influence of turbulence, if our recommendations are not adhered to, can influence the flow up to 20 %.





MSV F2 DN 200-400 may not be mounted with handle pointing down.

Sizing



Example:
MSV-F2 DN 65
Q = 16 m³/h
Δp = 5 kPa

Calculation for the valve setting:
Draw a straight line from the desired flow (16 m³/h) through the differential pressure (5 kPA) to k_v scale.

From the k_v value draw a horizontal line. Where it intersects the given valve (DN65) you can find the valve setting.

Result:
presetting 7.0
