

Data Sheet

Gas detection unit **Heavy duty**

Type GD Heavy Duty

Next generation gas detection for industrial refrigeration

The Heavy Duty gas detection units are used for monitoring and warning of hazardous Ammonia gas concentrations. They are intended for ATEX/ IECEx applications and consists of a robust flameproof metal enclosure that can be kept closed after wiring, since programming (configuration) is performed by magnetic field to the display via a magnetic pen. Depending on the application, they are available with an electrochemical, a semiconductor or a Pellistor sensor covering a wide range of ppm.

The Heavy Duty gas detection units are intended as Stand-alone, or connected to a central system like Gas Detection Controller Unit, or a PLC.

As stand-alone the on-board relay can be used for activation of alarm devices, while the Analog or RS485 Modbus connection to a central system allows additional centralized monitoring and alarm activation.

The gas detection units come with a factory default, 2-step alarm set-up ready for use. The integrated software enables the user to configure two individual alarm ranges. Alarm 1, a pre-alarm indicating the gas level has passed a predefined threshold 1, and - if the gas level passes predefined threshold 2 - the final alarm 2.

Features

- Digital, factory configured and pre-calibrated gas detectors for plug-and-play installation (no adjustment required)
- Easy configuration via Display and Magnetic pen and intuitive user-interface; helps simplify operator handling and minimize risk of operational, settings and calibration errors
- Stand-alone (integrated relay) and/or flexible connection to central controller - by either Analog or RS485 open Modbus communications
- Wide selection of sensor types and detection ranges
- Display background color indicating alarm or communication fault by turning red
- Fieldbus wiring - connect and power up to 96 sensors, wire length max. 900 meters (2953 ft) per segment; controller expansion modules permits additional segments and alarm relays
- Automatic self-diagnostics to ensure correct communication and operation. On board fault relay
- Sensor seal cap to prevent premature exposure during installation
- Digital user interface ensures high sensor accuracy
- Reduced risk of false alarms due to temperature compensated sensors
- Password protected alarm settings allowing authorized access only
- LCD display with status LED
- Magnetic pen/On-board acknowledge button to reset alarms and to verify that no gas leaks are present
- Service alerts on unit, controller or both, readable via service tool Display
- Quick and precise calibration procedures - either by Plug & Play replacement sensors or calibration with gas
- No potentiometers or multi-meters required
- For improved safety and to optimize the lifetime of the sensor, degenerated sensors with too low sensitivity (<30%) are rejected during calibration process
- Conformity to Ex d EN60079-0, -1, Ex d IEC 60079-0, -1, EN 50402, EN 61508-1, -2, -3, EN 50271
- Certificate BVS 18 ATEX E 052 X, IECEx BVS 18.0044X
- Enables regulatory compliance with EN 378:2016, ISO 5149:2014, IIAR 2-2017, and ASHRAE 15:2016

Functions

Working principle/Operation

One sensor is connected to the Heavy Duty sensor board via local bus. The Sensor board provides the power supply of the sensor and prepares the measured data for digital communication.

The operation menu of the Heavy Duty software is accessed through the Display via a Magnetic pen, or the connected Gas Detection Controller, or via the dedicated GD Service tool (or PC tool). The Service tool (or PC tool) is plugged directly to the board of the unit by use of an adapter. These interfaces allow the unit configuration, setting of the unit alarm levels and calibration of the attached sensor.

The service tool (or PC tool) can be used on all units across the Basic, Premium and Heavy Duty platforms.

For Stand-alone units the alarm signals are handled by the unit software, which activates the integrated relay directly. For central controlled units the alarm signals are handled by the Gas Detection Controller (or a PLC) via the 4-20 mA (2-10V) analog output or the RS485 open Modbus communication.

For additional operational safety the changing of parameters is password protected allowing authorized access only. The factory default password can easily be customized.

Product specification

Design

General info

- Cable gland mounted
- Sensor head (SX1) mounted bottom

Figure 1: Heavy Duty

Gas types and thresholds

Table 1: Gas types and thresholds

Sensor	Sensor Type	ppm range	Alarm 1 (Alarm relay)	Alarm 2	Hysteresis
Ammonia EC 100	Electrochemical	0 – 100	25 ppm	35 ppm	2 ppm
Ammonia EC 300	Electrochemical	0 – 300	25 ppm	150 ppm	2 ppm
Ammonia EC 1000	Electrochemical	0 – 1000	500 ppm	900 ppm	25 ppm
Ammonia EC 5000	Electrochemical	0 – 5000	1000 ppm	4500 ppm	50 ppm
Ammonia SC 10000	Semiconductor	0 – 10000	5000 ppm	9000 ppm	250 ppm
Ammonia P LEL	Pellistor	0 – 140000 (0 – 100% LEL)	21% LEL (30000 ppm)	21% LEL (30000 ppm)	1% LEL
HC R290/Propane P 5000	Pellistor	0 – 5000	800 ppm	2500 ppm	40 ppm

NOTE:

Hysteresis = 5% of Alarm1 (rounded up to the next higher integer)
Alarm thresholds must be set within 10 to 90% of the sensor range.

Electrical

Table 2: Electrical

Details	Description
Power supply	20 – 28 V DC
Power consumption (24 V DC)	90 mA, max. 130 mA
Control unit	Microprocessor with 12 bit converter resolution
Digital filter	Averaging in order to increase the EMC immunity
Visual indications	2 LEDs for operation, alarm and communication

Gas detection unit, Heavy duty

Details	Description
Analog output signal (active)	Proportional, overload and short-circuit proof, load $\leq 500 \Omega$
	4 – 20 mA = measuring range
	3.0 < 4 mA = underrange
	> 20 – 21.2 mA = overrange
	2 mA = fault
Serial interface	> 21.8 mA = fault High
	Serial data bus
Fault relay	Max. 30 V AC/DC, 1 A
Alarm relay	Max. 30 V AC/DC, 1 A
LCD	2 x 16 characters, 3 status LEDs, 4 menu operating elements

Sensor data

Table 3: Sensor data

Details	Description
Gas type	Flammable gases Toxic gases HCFC, HFC, HFO
Sensor element	Pellistor Electro Chemical Semiconductor
Measuring range	0 – 100 % LEL 0 – 1000 ppm / 0 – 5000 ppm 0 – 10000 ppm
Response time	$t_{90} < 20 \text{ sec. NH}_3$ $t_{90} < 40 \text{ sec. for NH}_3$ $t_{90} > 120 \text{ sec. for NH}_3$

Sensor head housing

Table 4: Sensor head housing

Details	Description
Material	CrNi Stahl: 1.4404
Dimensions (d x H)	30 x 56 mm (1.18 x 2.20 in.)
Protection class	Gas inlet IP64, with option splash-proof IP65
Thread	External thread M30 x 1.5

Environmental conditions

Table 5: Environmental conditions

Details	Description
Humidity	15 to 90% r.H.
Operating temperature	P: -40 °C to +60 °C / EC: -40 °C to +50 °C / SC: -40 °C to +50 °C

Physical characteristics

Table 6: Physical characteristics

Details	Description
Case / colour	Aluminium pressure die-casting / light grey RAL 7032, epoxy coating
Dimensions (d x H)	95 x 82 mm
Weight	Ca. 1.3 kg
Protection class	Housing protection IP66 to IP68 (depending on the cable glands used)
Mounting	Wall mounting (sensor head downwards)
Cable entry	1 x/in. (Ansi B1.20.1)
Wire connection	Spring-type terminal, 0.08 to 2.5 mm ² AWG 28 - 12
Wire length	Max. load 500 Ω (= wire resistance + controller input resistance)

ATEX marking

	II 2G Ex db IIC T4 Gb CE 0539
---	-------------------------------

LCD display

Table 8: LCD display Options

Details	Description
LCD	Two lines, 16 characters each, background highlighted in two colours
Operation	Menu driven via four magnetic buttons
Power consumption	5 V, 60 mA, 0.3 VA

Status LED

Table 9: Status LED

Details	Description
Colour / Mode	Red / yellow / green (alarm – fault – operation - service)
Protection class	IP65

Service and maintenance

The Heavy Duty gas detection units are calibrated either by replacing of sensor heads or by calibration with gas.

Plug & Play replacement sensors are pre-calibrated and factory certified for quick and easy calibration procedure. The sensor is connected to the local bus via a plug connection enabling easy and simple exchange of sensor instead of a calibration. The internal X-change routine recognizes the exchanged sensor during the exchange process and restarts the measurement mode automatically. An LED indicates the correct procedure of the exchange operation.

To ensure the proper functioning of the units and to prevent human errors, the sensor head can only be replaced by the same type and ppm range (exact replacement) that match the configuration. If a different sensor head is installed, the GD unit will show a communication error.

As an alternative, calibration with gas can be performed via the service tool (or PC tool), calibration gas with correct concentration and the Danfoss calibration adapter. The Danfoss gas detection units have an integrated, digital calibration interface and procedure, which makes the calibration process easy, accurate, and time-saving. No potentiometers or multi-meters required for the calibration. The calibration procedure requires significantly less calibration gas per calibration compared to traditional routines.

Electrical connection

Figure 2: Electrical connection

On board LED is similar to the display LED:

- Green (1) is power on
- Yellow (2) is an indicator of Error.
 - when the sensor head is disconnected or not the expected type
 - AO is activated but nothing connected
- Red (3)
- on alarm

On board Ackn. -/Test button:

- Test:
 - The button must be pressed for 20 sec.
 - Alarm is simulated, stop on release
- Ackn.:
 - Pressed while Alarm2, the audible warning switches off and goes back on after 5 min. when the alarm situation is still active (also possible over ESC button (use the magnetic pen).

Fieldbus loop

Each GD controller can handle up to 96 sensors and handle any mix of individual Gas detection units of the types Basic, Premium and Heavy Duty.

The max. recommended loop wire length is 900 meter (2953 ft) per segment.

With additional segments (and additional controller expansion modules) the max recommended loop wire length is 7200 meter (23622 ft).

The controller and the last GDU in each segment must be provided with a resistor of 560 Ohm. A U_{min} of 16 V DC must be secured at any spot in the loop.

Figure 3: How to make proper connections between the controller and each GDU

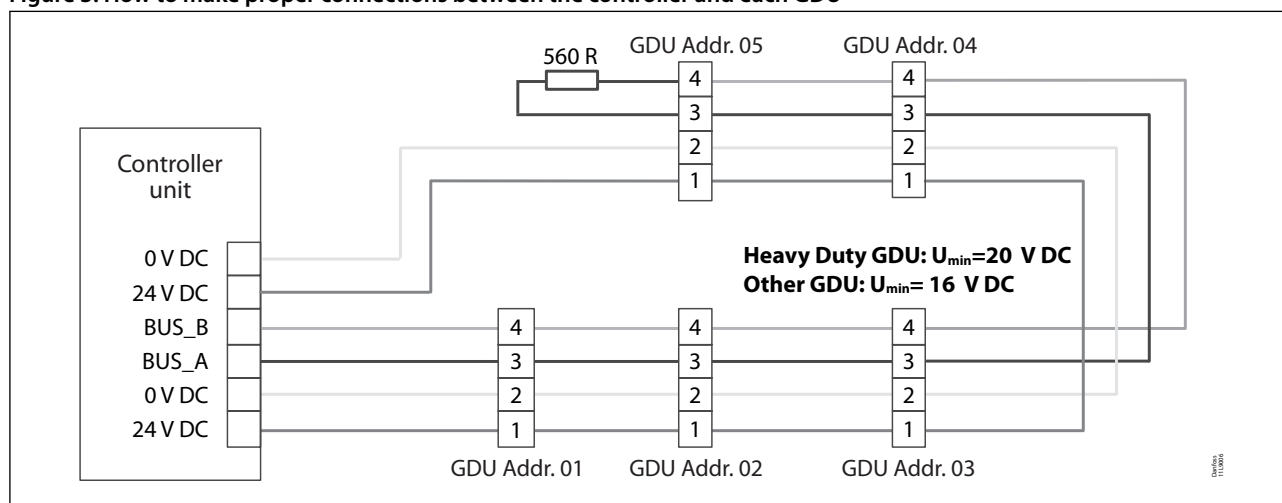

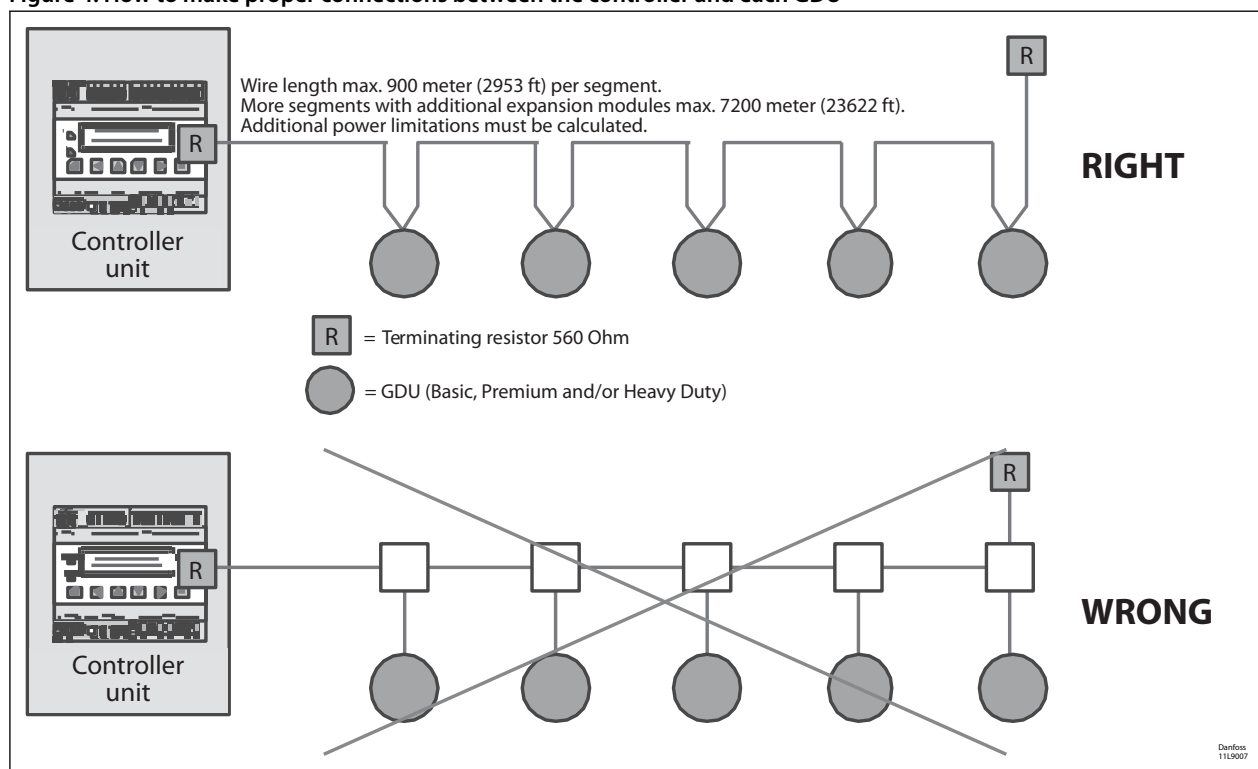

Figure 4: How to make proper connections between the controller and each GDU

Alarm scheme

Figure 5: Status LED

	Blinking (2 sec.)
	Fast blinking (1 sec.)
	Very fast blinking (0.1 sec.)
	Power LED
	Failure (e.g. sensor head is disconnected)
	Slow blinking, sensor warm up
	Fast blinking, sensor is in special mode (e.g. to change parameters, ...)

Ordering

Table 10: Ordering

Type	Model	Display included	Refrigerant	Sensor	ppm (range)	Alarm ppm	Temp range (°C)	Temp range (°F)	Code number
GDA	Heavy Duty	Yes	Ammonia	Electrochemical	0 – 100	25/35	-20 to +50	-4 to +122	148H6059

Accessories overview

Controller unit

Used for a centralized monitoring and warning. The input signals for the controller are collected via RS485 Modbus or analog communication. The controller can handle up to 96 digital sensors via Fieldbus and four (4) analog input. An additional 28 analog input is possible using seven (7) expansion modules (4-20 mA signal interface). The total number of connected sensors should not exceed 128 sensors. The controller unit can be employed as pure analog controller, as analog/digital, or as digital controller. Configuration is menu-driven via the keypad. For fast and easy configuration, the PC Tool is recommended.

Controller solution

Controller unit placed in an enclosure ready to be connected to a power source. A separate UPS for the controller is available.

Controller expansion module

Gas detection unit, Heavy duty

The gas detection Controller Expansion module is used for expansion of the cable coverage in terms of number of loops and the total wire length. Each Controller Unit can handle up to 7 Expansion modules allowing additional 7 segments with a total of 7200 meters (23622 ft.) wiring and a total of 32 relays for alarm device circuits.

Service tool

For interface with units with no display (Basic, Basic+, Premium, Premium+). Acts as a portable display and can be connected to all Danfoss gas detection units. (Heavy Duty w. adapter).

PC tool

The PC tool is a menu-driven and standalone software used for easy addressing, parameter setting, calibration, and data logging of the Basic, Premium and Heavy Duty gas detection units, and the controller unit.

Calibration adapter

The calibration adapter is required for connecting the calibration gas container, via the flow regulator, to the sensor head on the gas detection units. (Two variants, One for Basic and Premium plastic head sensors; one for heavy duty and Premium remote metal head sensors.).

Gateway for controller

The gateway is an addition to the controller and used for communicating via Modbus TCP/IP.

Magnetic pen

The pen is used to operate the Heavy Duty unit display. The Heavy Duty enclosure does not permit direct touch.

Certificates, declarations, and approvals

The list contains all certificates, declarations, and approvals for this product type. Individual code number may have some or all of these approvals, and certain local approvals may not appear on the list.

Some approvals may change over time. You can check the most current status at danfoss.com or contact your local Danfoss representative if you have any questions.

Online support

Danfoss offers a wide range of support along with our products, including digital product information, software, mobile apps, and expert guidance. See the possibilities below.

The Danfoss Product Store

The Danfoss Product Store is your one-stop shop for everything product related—no matter where you are in the world or what area of the cooling industry you work in. Get quick access to essential information like product specs, code numbers, technical documentation, certifications, accessories, and more.

Start browsing at store.danfoss.com.

Find technical documentation

Find the technical documentation you need to get your project up and running. Get direct access to our official collection of data sheets, certificates and declarations, manuals and guides, 3D models and drawings, case stories, brochures, and much more.

Start searching now at www.danfoss.com/en/service-and-support/documentation.

Danfoss Learning

Danfoss Learning is a free online learning platform. It features courses and materials specifically designed to help engineers, installers, service technicians, and wholesalers better understand the products, applications, industry topics, and trends that will help you do your job better.

Create your Danfoss Learning account for free at www.danfoss.com/en/service-and-support/learning.

Get local information and support

Local Danfoss websites are the main sources for help and information about our company and products. Find product availability, get the latest regional news, or connect with a nearby expert—all in your own language.

Find your local Danfoss website here: www.danfoss.com/en/choose-region.

Spare Parts

Get access to the Danfoss spare parts and service kit catalog right from your smartphone. The app contains a wide range of components for air conditioning and refrigeration applications, such as valves, strainers, pressure switches, and sensors.

Download the Spare Parts app for free at www.danfoss.com/en/service-and-support/downloads.
