Danfoss

Data Sheet

Shut-off valve SVA-140B Strainer FIA-140B 140 bar (2030 psi) series

The new 140 bar manual valve range for Industrial CO₂ Trans-critical Systems

The new 140 bar manual valve range for Industrial CO₂ Trans-critical Systems is based on the successful modular Standard SVL platform. The same flexibility, simplicity and efficiency are features offered in this new series.

The valves are available as complete valves

- From DN 50 (2") to 100 (4")
- In angle or straightway
- With DIN or ANSI butt-weld connections and DIN or ASME hard soldering (brazing) connections up to 64mm or 2 1/8"
- 2 different configurations:
- Shut-off (SVA-140B)
- Strainer (FIA-140B)

Danfoss

Features

SVA-140B

- Applicable to: R744 (CO₂) Sub and Trans critical
- Modular Concept:
- Each valve housing is available with several different connection types and sizes
- Possible to convert FIA-140B strainers to other products in the Flexline[™] SVL family (e.g. shut-off valve) just by replacing the complete top part
- Max. working pressure: 140 bar (2030 psi)
- Max. differential pressure: 110 bar (1595 psi)
- Temperature range: -40 °C to +150 °C (-40 °F to + 302 °F)
- Fast and easy valve overhaul service. It is easy to replace the top part and no welding is needed
- Available in angle and straightway versions
- Each valve type is clearly marked with type, size and performance range
- The valves and caps are prepared for sealing, to prevent operation by unauthorized persons, using a seal wire
- Balanced piston design providing smooth low torque opening of valve at high differential pressure
- Internal metal back seating
- Can accept flow in both directions
- Housing and bonnet material is low temperature steel according to requirements of the Pressure Equipment Directive and other international classification authorities
- Equipped with bolts in low temp steel with high tensile strength
- Classification: UL, CRN etc. To get an updated list of certifications on the products please contact your local Danfoss Sales Company

FIA-140B

- Applicable: R744 (CO₂) Sub and Trans critical
- Each valve housing is available with several different connection types and sizes
- Possible to convert SVA-140B strainers to other products in the Flexline[™] SVL family (e.g. strainer) just by replacing the complete top part
- Max. working pressure: 140 bar (2030 psi)
- Temperature range -40 °C to +150 °C (-40 °F to +302 °F)
- Available in angle and straightway versions
- Each valve type is clearly marked with type, size and performance range
- · Filter net of stainless steel mounted direct without extra gaskets means easy servicing
- Two types of strainer inserts are available:
- A plain insert of stainless steel
- A pleated insert with extra large surface, which ensures long intervals between cleaning and low pressure drop
- FIA-140B 50-100 (2 4 in.): A large capacity filter bag can be inserted for cleaning plant during commissioning
 FIA-140B 80-100 (3 4 in.) can be equipped with a magnetic insert for detention of iron particles and other magnetic particles
- Housing and bonnet material is low temperature steel according to requirements of the Pressure Equipment Directive and other international classification authorities
- Equipped with bolts in low temp steel with high tensile strength
- Classification: UL, CRN etc. To get an updated list of certifications on the products please contact your local Danfoss Sales Company

Media

Refrigerants

Applicable to R744 (CO_2).

New refrigerants

Danfoss products are continually evaluated for use with new refrigerants depending on market requirements.

When a refrigerant is approved for use by Danfoss, it is added to the relevant portfolio, and the R number of the refrigerant (e.g. R513A) will be added to the technical data of the code number. Therefore, products for specific refrigerants are best checked at store.danfoss.com/en/, or by contacting your local Danfoss representative.

Product specification

Pressure and temperature data

Table 1: Temperature and pressure

Description	Values
Temperature range	-40 °C /+150 °C (-40 °F /+302 °F)
Max. working pressure	140 bar (2030 psi)
Max. differential pressure ^(*)	110 bar (1595 psi)

(*) Only valid for SVA-140B

<u>Design</u>

Housing

Made of special, cold resistant steel

Valve cone (SVA-140B)

A PEEK tightening ring provides perfect sealing with minimum closing force in the entire temperature range.

Spindle

Made of polished stainless steel.

Piston

An orifice through the cone and spindle equalizes the valve inlet pressure P1 with the pressure in the chamber above the piston when the spindle is operated. In this way, can the valve be operated smoothly by hand and an appropriately sized wrench.

Packing gland

The low temperature packing gland ensures a perfect tightness in the range: -40 °C/+150 °C (-40 °F/+302 °F). The packing gland can be re-tightened with a wrench postponing the overhaul of the valve.

Installation

It is recommended that the valves be installed in the direction of flow indicated by the arrow on the valve body. The SVA-140B can be installed in the opposite direction, but this slightly reduces the k,-value (C,-value).

The valve is designed to withstand high internal pressure. However, the piping system in general should be designed to avoid liquid traps and reduce the risk of hydraulic pressure caused by thermal expansion.

For further information refer to installation instructions for SVA-140B.

Figure 1: Example of Marking Ring SVA-140B

Figure 2: Example of Marking Ring FIA-140B

Selection of strainer size

The mesh aperture size of the strainer must satisfy the requirements stated by the suppliers of the equipment to be protected.

The following recommendations of aperture size apply in general to refrigeration installations:

Table 2: All lines		
First start up: (Use strainer element with removable insert for FIA DN15-40 or separate filte be removed after the first 24 hours of operation)	er bag for FIA DN 50-200. 50µ insert should normally	50μ
Table 3: Liquid Lines		
Ahead of pumps:	500µ [38 mesh]	
After pumps:		
Table 4: Protection of automatic regulation equipment		
Generally	150µ [100 mesh] / 250µ [72 mesh]	
Sensitive equipment, e.g. suction regulators with low temperature	250µ [72 mesh]	
Table 5: Suction Lines		
Ahead of screw compressor	250µ [72 mesh]	
Ahead of piston compressor	150µ [100 mesh]	

O NOTE:

Mesh is the number of threads per inch. μ (microns) is the distance between two threads (1 μ = 1 /1000 mm).

Connections

Available with the following connections:

- Butt-weld DIN (EN 10216-2)
- Butt-weld ANSI (B 36.10 Schedule 80)
- Brazing EN 1254-5, 54 and 64mm
- Brazing ASME B16.50, 2 1/8" and 2 5/8"

The DN 50 Straight value is machined from a normal DN 65 Straight sized value house, but with DN 50 connections. The different geometry explains why the K_v/C_v value of the DN 50 Straight exceptionally is higher than DN 50 Angular.

Certificates, declarations and approvals

The list contains all certificates, declarations, and approvals for this product type. Individual code number may have some or all of these approvals, and certain local approvals may not appear on the list.

Some approvals may change over time. You can check the most current status at danfoss.com or contact your local Danfoss representative if you have any questions.

Table 40: Certificates, declarations and approvals

File name	Document type	Document topic	Approval Authority
033F0685.AN	EU Declaration	PED	Danfoss
033F0691.AH	Manufacturers Declaration	RoHS	Danfoss

Table 41: Certificates and declarations

SVA/FIA-140B valves are approved according to the European standard specified in the Pressure Equipment Directive and are CE marked.

O NOTE:

For further details / restrictions - see Installation guide.

Online support

Danfoss offers a wide range of support along with our products, including digital product information, software, mobile apps, and expert guidance. See the possibilities below.

The Danfoss Product Store

The Danfoss Product Store is your one-stop shop for everything product related—no matter where you are in the world or what area of the cooling industry you work in. Get quick access to essential information like product specs, code numbers, technical documentation, certifications, accessories, and more.

Start browsing at store.danfoss.com.

Find technical documentation

Find the technical documentation you need to get your project up and running. Get direct access to our official collection of data sheets, certificates and declarations, manuals and guides, 3D models and drawings, case stories, brochures, and much more.

Start searching now at www.danfoss.com/en/service-and-support/documentation.

Danfoss Learning

Danfoss Learning is a free online learning platform. It features courses and materials specifically designed to help engineers, installers, service technicians, and wholesalers better understand the products, applications, industry topics, and trends that will help you do your job better.

Create your Danfoss Learning account for free at www.danfoss.com/en/service-and-support/learning.

Get local information and support

Local Danfoss websites are the main sources for help and information about our company and products. Find product availability, get the latest regional news, or connect with a nearby expert—all in your own language.

Find your local Danfoss website here: www.danfoss.com/en/choose-region.

Spare Parts

Get access to the Danfoss spare parts and service kit catalog right from your smartphone. The app contains a wide range of components for air conditioning and refrigeration applications, such as valves, strainers, pressure switches, and sensors.

Download the Spare Parts app for free at www.danfoss.com/en/service-and-support/downloads.

Coolselector[®]2 - find the best components for you HVAC/R system

Coolselector[®]2 makes it easy for engineers, consultants, and designers to find and order the best components for refrigeration and air conditioning systems. Run calculations based on your operating conditions and then choose the best setup for your system design.

Download Coolselector[®]2 for free at coolselector.danfoss.com.
