

Data Sheet

Electric expansion valve Type **AKV 10P** and **AKV 10PS**

For liquid injection into evaporators

AKV 10P and AKV10PS are electric operated expansion valves designed for refrigeration plants.

The AKV 10P and AKV 10PS valves are normally controlled by a controller from Danfoss range of ADAP- KOOL® controllers, that ensures a precise liquid injection into evaporators.

The AKV 10P and AKV 10PS valves are supplied as a part program, as follows:

- Separate valve
- Separate coil with terminal box, DIN plug or cable
- Spare parts in the form upper part, orifice and filter

The orifice and piston assemblies are replaceable. The AKV 10P and AKV 10PS valves cover a wide capacity range.

Features

Precise control of liquid injection

- Optimum utilization of the evaporator
- Increased energy efficiency and COP
- Improved overall system performance
- Enables energy saving minimum stable superheat and adaptive defrost algorithms due to turbulent flow
- Provides excellent distribution and oil return
- Repetitive operation of the valve at all conditions

Superior valve technology

- Soft pulse operation makes possible to have a low noise valve that guarantees precise flow control and increased energy efficiency of the system

Fully Serviceable valve

- Fast troubleshooting during system diagnostics
- Replaceable filter and orifice assembly
- Special Service coil available for installation and servicing

Fast opening/closing within sec.

- Quick reaction to the operating condition.
- Minimizes the risk of liquid refrigerant flowing into the compressor at shut down and low pressure cut out at start up
- Normally closed Solenoid tight shut-off valve
- Prevents migration of the refrigerant during stand-still
- Reduced complexity by reducing number of components in the system

Supports variety of refrigerants with wider regulation range

- Wide application scope

Compact, lightweight design

- Flexible and easy integration in any system

Wider selection range

- Wider range of AC and DC voltage coils
- Coils with various cable lengths

Valve construction

- Internal and external corrosion resistant

Protecting the environment and climate

- Manufactured according to ISO/TS16949
- Second – to – none quality and reliability

⚠ WARNING:

Safety notes for flammable refrigerants (R454C, R454A, R1234ze, R1270, R290, R32, R444B, R452B, R454B, R600, R600a, R455A, R516A, R1234yf):

- This product is validated in accordance to ATEX, EN 378, ISO 5149, ASHRAE 15, IEC 60335-2-x or equivalent standards.
- Ignition risk is evaluated in accordance to ISO 5149 and IEC 60335.
- See safety note below.

⚠ WARNING:

Safety notes:

- The product can be applied on systems with R454C, R454A, R1234ze, R1270, R290, R32, R444B, R452B, R454B, R600, R600a, R455A, R516A, R1234yf as the working fluid.
- For countries where safety standards are not an indispensable part of the safety system Danfoss recommend the installer to get a third party approval of the system containing flammable refrigerant.
- Note, please follow specific selection criteria stated in the datasheet for these particular refrigerants.
- The valve must only be used in closed circuit refrigeration system, where no oxygen is present acc. EN 378, ISO 5149 ASHRAE 15 or IEC 60335-2-x or equivalent standards.

Features	Direct operated valve	Servo operated valve
Valve type	AKV 10P0 to AKV 10P8	AKV 10PS4 to AKV 10PS8
Working principle	PWM (Pulse-width modulation)	PWM (Pulse-width modulation)
Recommended period of cycle time	6 Seconds	6 Seconds
Regulation range (Capacity range)	10 – 100%	10 – 100%
Connection type	Solder	Solder
Evaporating temperature (on outlet side of valve)	-60 – 60 °C / -76 – 140 °F	-60 – 60 °C / -76 – 140 °F
Ambient temperature (coil dependent)	-50 – 80 °C / -58 – 176 °F	-50 – 80 °C / -58 – 176 °F
Max. OPD	35 bar / 508 psig (AKV 10P0 to AKV 10P6)	35 bar / 508 psig
Max. OPD	18 bar / 261 psi (AKV 10P7 to AKV 10P8)	N/A
Min. OPD	0 bar / 0 psi	0.1 bar / 1.45 psi
Filter, replaceable	Internal 100 µm	Internal 53 µm
Max. working pressure	90 barg / 1305 psig	90 barg / 1305 psig
MAP (Max. Abnormal Pressure) 1305 psig	1305 psig	1305 psig
COT (Continuous Operation Temperature)	140 °F	140 °F
Recommended Danfoss filter	N/A	ELIMINATOR® Hermetic filter drier, type DML / DMSC

⚠ WARNING:

It is recommended to selected Servo operated AKV 10PS valves for those application where higher MOPD (with low coil power) and high dampening is required.

WARNING:

Safety notes for flammable refrigerants (R454C, R454A, R1234ze, R1270, R290, R32, R444B, R452B, R454B, R600, R600a, R455A, R516A, R1234yf):

1. The products (only refer to IP65/67 coils) are validated in accordance to ISO 5149, IEC 60335 (ref. IEC/EN 60079-15). Ignition risk is evaluated in accordance to ISO 5149 and IEC 60335 (ref. IEC/EN 60079-15). See safety note below.
2. Please make sure that there is no spark, arc during the application, especially the connection of coils.
3. Follow the instruction to mount the coil correctly and apply the O-ring for sealing, to prevent the moisture penetrate inside the coils.
4. Always install a fuse ahead of the coil to avoid short circuit (fuse size should be around 2 times of rated current, and time lag: medium);
5. The coil used in an area of not more than pollution degree 2.

WARNING:

Safety notes:

1. The product (only refer to IP65/67 coils) can be applied on systems with R454C, R454A, R1234ze, R1270, R290, R32, R444B, R452B, R454B, R600, R600a, R455A, R516A, R1234yf as the working fluid.
2. For countries where safety standards are not an indispensable part of the safety system Danfoss recommend the installer to get a third party approval of the system containing flammable refrigerant.
3. Note, please follow specific selection criteria stated in the datasheet for these particular refrigerants.
4. Note that the product (only refer to IP65/67 coils) has NOT been verified ATEX or IECEx or IEC 60079 series zone 2 compliant. This product is only validated for systems in compliance with ISO5149, IEC 60335 (ref. IEC/EN 60079-15). It is the responsibility of the user to verify such compliance. Improper use can cause explosion, fire, leakage potentially causing death, personal injury, or damage to property.

Flow direction

AKV 10P/10PS is designed for single flow direction and following pictures from A to B refers the normal flow.

Coolselector®2 - Valve sizing using calculation software

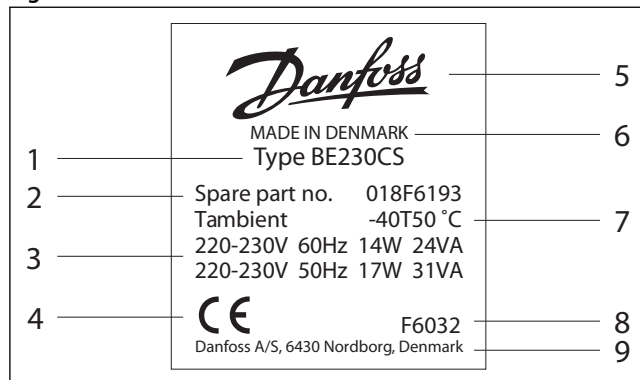

It is strongly recommended to use Coolselector®2 to find the correct valve for your application. The software can be downloaded from the Danfoss website. When using the calculation software it is recommended to choose a valve that is between 50% and 75% loaded at the nominal capacity. In addition, the liquid velocity in the line leading to the valve should not exceed 1m/s (3ft/s).

Download Coolselector®2 for free at coolselector.danfoss.com.

The valve capacity is regulated by means of pulse-width modulation. Within a period of six seconds a voltage signal from the controller will be transmitted to and removed from the valve coil. This makes the valve open and close for the flow of refrigerant.

The relation between this opening and closing time indicates the actual capacity. If there is an intense need for refrigeration, the valve will remain open for almost all six seconds of the period. If the required amount of refrigeration is modest, the valve will only stay open during a fraction of the period.

The amount of refrigeration needed is determined by the controller. When no refrigeration is required, the valve will remain closed and thus function as a solenoid valve.

AKV 10P0 - AKV 10P8 is a direct operated valve which can operate at 0 bar/0 psi differential pressure.

AKV 10PS4 - AKV 10PS8 is a servo piston operated valve which needs a minimum differential pressure of 0.1 bar / 1.45 psi to open the valve and keep it open.

Appendix: Dimensioning of the liquid line

Correctly dimensioned liquid line

To obtain a correct supply of liquid to the AKV 10P/PS valve, the liquid line to the individual AKV 10P/PS valve must be correctly dimensioned.

The liquid flow rate should not exceed 1 m/s (3 ft/s).

Dimensioning of the liquid line must be based on the capacity of the valve at the pressure drop with which it is operating and not on the evaporator's capacity.

AKV 10P3	3/8 in / 10 mm	3/8 in / 10 mm
AKV 10P4	3/8 in / 10 mm	3/8 in / 10 mm
AKV 10P5	1/2 in / 12 mm	1/2 in / 12 mm
AKV 10P6	1/2 in / 15 mm	1/2 in / 15 mm
AKV 10P7	5/8 in / 16 mm	5/8 in / 16 mm

NOTE:

The conditions are the same as for the rated capacities.

Evaporating temperature is -10 °C for refrigeration and -30 °C for freezing.

The super heat is 8 K for both refrigeration and freezing.

Pipes are according ANSI or DIN-EN.

If conditions deviate from above, the pipe dimensions should be checked.

Troubleshooting

Table 18: Troubleshooting

Symptom	Possible Cause	Remedy
Valve does not open	Lack of proper electrical connection/Power	Check the connection between valve and a controller
	Incorrect voltage/frequency	Check coil specification against measured operating voltage
	Differential pressure too high/low	Check differential pressure of valve against technical specification
	Impurities in the valve	Replace with suitable valve and or coil
	Burnt out coil	Check dirt inside valve and clean out impurities
		Never take the coil off the valve if voltage is applied.
		The coil can burn out
	Valve stuck open after being assembled	Check the wiring diagram and wiring itself
Internal leakage/ valve does not close or closes partially	Valve does not open after orifice has been exchanged to a larger capacity due to high differential pressure	Check relay contacts, lead connections and fuses
	Continuous voltage on coil	Check Instruction if all correct parts are used, and correctly assembled
	Impurities in the valve	Replace with suitable valve and or coil
	Pulsation in discharge line Differential pressure too high in open position	Do not remove powered coil off the valve
		Check dirt inside valve and clean out impurities
		Check pressure and flow conditions
		Check the supply voltage in the coil
		Replace with suitable valve

Electric expansion valve, type AKV 10P and AKV 10PS

Symptom	Possible Cause	Remedy
Insufficient capacity	Valve capacity too small	Check refrigeration system capacity and compare with valve capacity
		Replace with larger valve if necessary
		- larger capacity orifice in AKV 10P
		- larger capacity piston in AKV 10PS
	Suction pressure too low Evaporator superheat too high	Check superheat performance, the settings SH min and SH max. in the super heat controller
		Check valve capacity
		Check coil excitation time
Evaporator fully or partly iced up	Valve blocked with foreign material	Also check section "High Superheat"
		Valve strainer blocked, replace strainer with a new one
	Valve blocked with foreign material Also check "Insufficient capacity"	Replace valve strainer/filter De-ice evaporator
High superheat	Lack of sub-cooling	Check refrigerant Also refer to section Insufficient capacity
	Controller is not setup/tuned properly	Check the controller superheat settings and sensors connected to it Tune PID parameters in the controller
Flash gas	Lack of sub-cooling ahead of valve	Check refrigerant for flash gas ahead of valve/external subcooler If the valve is placed much higher than condenser outlet
		Check pressure difference
	Oversized valve selected	Limit max opening degree of the valve setting in controller
		Check refrigeration system capacity and compare with valve capacity Use proper valve size suitable for the system
Pulsations in liquid line	High flow velocity, max. 1 m/s	Check flow velocity, using coolselector2
		Change to AKV 10PS for maximum dampening effect
		Use larger diameter pipes to reduce flow velocity
Overheating coil	Armature is not moving when coil is energized	Check section valve does not open
	Too high voltage supply, dirt in valve, too high MOPD)	

Ordering

Standard global coils

Table 19: Standard global coils

Multi-pack code no.	Identical Industrial pack code no.		Identical spare part coil with DIN spade	Supply voltage/ power/frequency	Connection type/ enclosure rating	MOPD of individual coil (bar)						
						AKV 10P					AKV 10PS	
	Code no.					Pcs. per pack	Orifice size					Orifice size

Accessories

Figure 4: Plug for DIN
spade connection

Type	Voltage	Frequency	Quantity	Code no. Multi pack
	[V]	[Hz]	[Pcs]	
DIN plug	Max. 250	50 / 60	100	042N0156

Single pack = 1 product in a box with installation guide

Multi pack = box with x pieces single pack (can be split)

Industrial pack = x pieces in one box (cannot be split)

Product	Description	Code no.
Solenoid valve Tester	Permanent magnet for AKV 10P and AKV 10PS (for installation and testing purpose)	018F0091

Certificates, declarations, and approvals

The list contains all certificates, declarations, and approvals for this product type. Individual code number may have some or all of these approvals, and certain local approvals may not appear on the list.

Some approvals may change over time. You can check the most current status at danfoss.com or contact your local Danfoss representative if you have any questions.

Valid approvals

(Refrigerant valve) 53RO

Low Voltage Directive (LVD) 2014/35/EU

Table 22: Approvals for AKV 10P and 10PS

File name	Document type	Document topic	Approval authority
033F1035.AJ	Manufacturers Declaration	PED	Danfoss

Online support

Danfoss offers a wide range of support along with our products, including digital product information, software, mobile apps, and expert guidance. See the possibilities below.

The Danfoss Product Store

The Danfoss Product Store is your one-stop shop for everything product related—no matter where you are in the world or what area of the cooling industry you work in. Get quick access to essential information like product specs, code numbers, technical documentation, certifications, accessories, and more.

Start browsing at store.danfoss.com.

Find technical documentation

Find the technical documentation you need to get your project up and running. Get direct access to our official collection of data sheets, certificates and declarations, manuals and guides, 3D models and drawings, case stories, brochures, and much more.

Start searching now at www.danfoss.com/en/service-and-support/documentation.

Danfoss Learning

Danfoss Learning is a free online learning platform. It features courses and materials specifically designed to help engineers, installers, service technicians, and wholesalers better understand the products, applications, industry topics, and trends that will help you do your job better.

Create your Danfoss Learning account for free at www.danfoss.com/en/service-and-support/learning.

Get local information and support

Local Danfoss websites are the main sources for help and information about our company and products. Find product availability, get the latest regional news, or connect with a nearby expert—all in your own language.

Find your local Danfoss website here: www.danfoss.com/en/choose-region.

Coolselector®2 - find the best components for you HVAC/R system

Coolselector®2 makes it easy for engineers, consultants, and designers to find and order the best components for refrigeration and air conditioning systems. Run calculations based on your operating conditions and then choose the best setup for your system design.

Download Coolselector®2 for free at coolselector.danfoss.com.
