Data Sheet

Hydraulic motor - high speed MAH 6.3 - MAH 12.5

Application

MAH 6.3 and 12.5 are high-speed motors operated by water hydraulics. The hydraulic medium is ordinary tap water. The motors base on the axial piston principle that enables a light and compact design. The water lubricates all movable parts in the motor, and there is thus no need for special oil lubrication.

The motors vary in size from 6.3 cm³ to 12.5 cm³ per revolution (rated displacement).

The maximum operating torques vary from 12.5 Nm to 25 Nm and maximum outputs from 5 kW to 8 kW.

Characteristic features

- Smooth running within a large operating parameters.
- Constant torque over a wide speed range.
- High starting torque
- Long life under severe operating conditions.
- Compact design.
- For use in both open and closed systems.
- Quiet in operation.
- Few wear parts and low maintenance costs.
- No oil lubrication.
- Non-corroding materials.
- Easy-to-clean design.

Application examples

- Food industry
- Mining equipment
- · Humid and wet environments
- Pharmaceutical industry

- Chemical industry
- Water treatment
- Nuclear industry

Warranty

If the recommendations in the manual are not followed, Danfoss reserves the right to void the warranty.

| Geometric displacement | (cm³) | | 6.3 | 12.5 |
| Max. speed | (min-1) | kont. | 4000* | 3000 |
| Min. speed | (min ⁻¹⁾ | | 300 | 300 |
| Max. torque | (Nm) | kont | 12.5 | 25 |
| Starting torque at max. pressure drop | (Nm) | kont | 3.5 | 12.5 |
| Starting pressure at unloaded shaft | (bar) | | 80 | 50 |
| Max. power at max. speed. | (kW) | kont | 5.2 | 7.8 |
| Max. pressure drop and inlet pressure | (bar) | kont | 140* | 140 |
| Max. waterflow | (l/min) | kont | 26.8 | 40 |
| Return line pressure at pin = 140 bar, no shaft load (| | (bar) | 80 | 50 |
| Return line pressure at pin = 140 bar, max. shaft load | | (bar) | 10 | 10 |
| Max. system press.at serial operation, no shaft load | | (bar) | 115 | 105 |
| | | kont | | |
| Drain flow at 140 bar/1500 min ⁻¹ | (l/min) | | < 1 | < 1.5 |
| Weight | kg | | 4.1 | 6.3 |

^{*} MAH 6.3: Δp (pressure drop) up to 3100 min-1 = 140 bar, there is then a linear reduction in Δp to 100 bar at 4000 min-1

Function principle

Water-hydraulic motors convert hydraulic energy (pressure, water flow) to mechanical energy (torque, speed).

Danfoss water-hydraulic motors are high-speed units with fixed displacement. A given water flow and a given pressure, determine the displacement (motor size), speed and torque. For a given displacement (motor size) speed is determined by the water flow and torque is determined by the pressure.

The motors are axial piston units which operate on the swashplate principle.

Two sizes of housing cover the entire range: One for 6.3 cm³ motors, and one 12.5 cm³ motors.

The axial piston principle gives a light and compact design in relation to actual power output.

The motors are designed to ensure that all moving parts are lubricated by water.

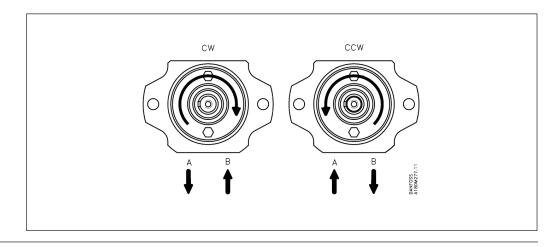

Furthermore, the motor design is such that ordinary drinking water is used, i.e. water with no additives whatsoever.

Direction of rotation

Connections and direction of rotation appear from the product label on the motors (see also the below drawing).

The motors can be reversed for shorter periods, but will run with slightly less efficiency and starting torque.

If reversible operation for longer periods is required, please contact your load Danfoss Sales representative.

Data sheet Motor, High Speed, MAH 6.3 and MAH 12.5 **Sealing element** USIT ring, fittings with O-ring connection or similar. **Shaft load** Minimum speed at the loads stated below is 400 F₄ daN $F_R daN$ MAH 6.3 30 65 MAH 12.5 100

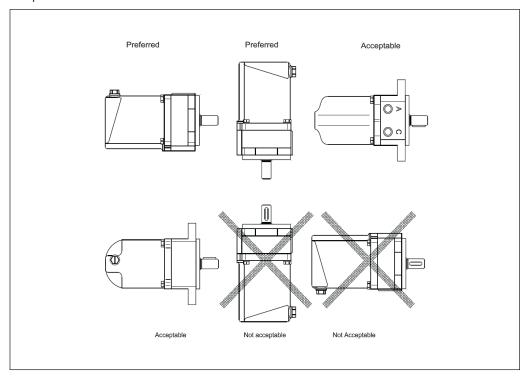

| Drain line | Max. pressure = 6 bar absolute. Drain pressure must never exceed return pressure by more than 1 bar. | Installing the drain line The drain line/motor must be positioned so that the motor cannot empty itself during standstill. |
|----------------|--|---|
| Temperature | Fluid temperature: Min. +3°C to max. +50°C. at max. pressure Min. +3°C to max. +60°C. at max. 100 bar Ambient temperature: Min. 0°C to max. 50°C. | In case of lower operating temperatures, please contact the Danfoss Sales Organization for Water Hydraulics. Storage temperature: Min40°C to max. +70°C. |
| Motor variants | MAH motors are optimized for operation in one direction and are therefore available in CW and CCw versions. | |
| Filtration | The water supplied to the valve must be filtered: $10 \mu m$ absolute, β_{10} -value > 5000 filter is recommended. | For further information on filters, please contact the Danfoss sales department for water hydraulics. |

Orientation

The drawing shows preferred acceptable, and not acceptable orientations of the motor.

Installation

It is recommended to use a flexible coupling and ensure that the gap between the two metal parts of the coupling is min. 3 mm, even though the motor can handle a limited shaft load.
