

## Installation Guide

### Dry Levelling Compound for SpeedUp and SpeedUp Eco

#### 1 Installation of dry levelling compound for SpeedUp and SpeedUp Eco

Fig. 1: Determine your datum and your compound level (min. 10 mm, max. 60 mm).

Fig. 2: Pour lines of compound to a moderate height, the distance of the lines depending on the width of the leveling rule.

Fig. 3: With large flat trowel spread and flatten the compound.

Fig. 4: Position the parallel guides on each of the lines and adjust according to the required height.

Fig. 5: Continue to fill the floor in sections with compound and then position the leveling rule on the parallel guides.

Fig. 6: During the leveling additional compound may be required.

Fig. 7: In larger rooms the leveling of the compound will have to be finished in several adjacent lines.

Fig. 8: Compound at the edges may have to be worked again with trowel.

Fig. 9: Insulation panels serve as walk boards or walk islands and so prevent damage.

Fig. 10: Once finished begin laying of the additional insulation.
