Thermostatic expansion valve
Type **TD 1 / TDE 1**

Version 2

TD 1 / TDE 1 is a thermostatic expansion valve designed to regulate refrigerant injection into evaporators. The injection depends on the refrigerant superheat at the evaporator outlet, where the bulb must be placed.

TD 1 / TDE 1 is constructed for hermetic sealed systems and supplied as angleway and straightway version.

OEM Applications:

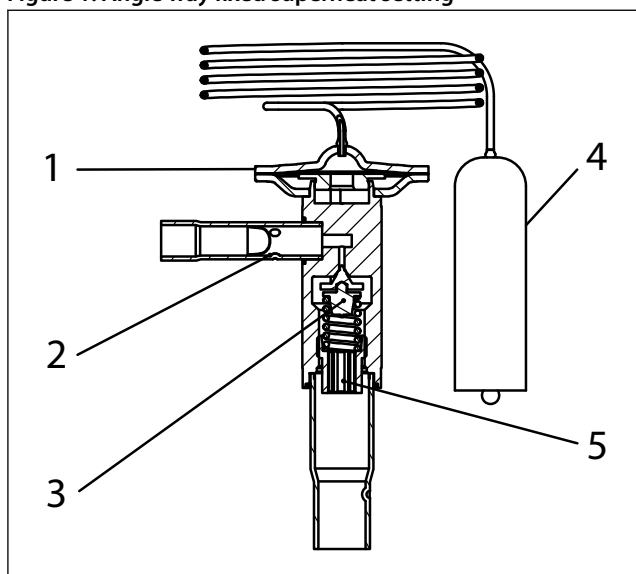

- GDM (Glass Door Merchandiser)
- Commercial fridge and freezer
- Heat Pump

Features

- Refrigerants: R134a, R1234yf, R22, R290, R404A, R407C, R452A, R454C, R455A, R513A. Other refrigerants are on request.
- Rated capacity from 0.87 to 6.86kW / 0.25 to 1.95TR for R290.
- Stainless steel bulb and Danfoss patented bulb strap:

- Permanent filter at inlet.
- Optional bleed function.
- Compact and hermetic construction.
- Stainless steel capillary tube
 1. Flexible lightweight capillary tube, tolerates more bending for trouble-free installation and longer life.
 2. Greater resistance to vibration during operation because of low weight
- Laser welded stainless steel power element, capillary tube and bulb:
 1. optimum regulation properties
 2. long life of diaphragm
 3. high pressure strength
- MOP (Max. Operating Pressure) function is available.

Functions

Figure 1: Angle way fixed superheat setting

1	Thermostatic element (diaphragm)
2	Strainer
3	Fixed orifice assembly
4	Bulb with capillary tube
5	Locked setting screw

TD 1 / TDE 1 valves have a fixed orifice assembly. Both straight way and angle way configuration are available and the angle way version is designed with fixed superheat setting only.

The valves are available with internal or external pressure equalization. External pressure equalization should always be used on systems with liquid distributors.

The stainless steel capillary tube and bulb with Danfoss patent bulb strap give reliable connection. It gives fast and precise reaction to temperature changes in the evaporator.

To avoid charge migration when MOP valves are used, the bulb temperature must be lower than the thermostatic element temperature.

Valve selection based on capacity calculation

As for extended capacity calculations and valve selection based on capacities and refrigerants, please refer to Coolselector[®]2. Rated and extended capacities are calculated with the Coolselector[®]2 calculation engine to ARI standards with the ASEREP equations based on laboratory measurements of selected valves.

Open the Coolselector tool and select thermostatic expansion valve.

Coolselector can be downloaded from <https://www.danfoss.com/en/service-and-support/downloads/dcs/coolselector-2/>

or used online on <http://coolselectoronline.danfoss.com>
