14. CO₂ BOCK® subcritical- and transcritical compressors	34

1. Monitoring and system managing network units

System manager AK-SM 8xxA network unit specifically designed for convenience store market, medium and hyper supermarkets but also cold room storage plants

- Simple user interface for fast and easy access to your information
- Refrigeration, HVAC, lighting, energy control, gas detectors via built in control logic
- Support for Danfoss controllers
- Full functional web server built in
- Built in Modbus, Ethernet, Lonworks® RS485- Implementation of IT industry standard security protocols (HTTPS, SSL/TSL 1.2, WPA2 encryption)
- XML compatible, allowing interface for remote access applications

With LonWorks®

Alsense Food Retail – IoT cloud application for supermarkets

Cloud solution from Danfoss climate solutions for supermarkets and food retail applications. Our service offering is a sustainable, scalable and secure portal for optimizing the performance of food retail operations. It's the technology you want to easily reach the efficiencies you need.

With Alsense, you'll be able to easily track refrigeration asset performance, respond to alarms, integrate 24/7 monitoring, reduce energy consumption and much more — all in one integrated, modern platform.

2. Pack controllers

AK-PC Pack Controllers for CO₂ Transcritical Booster Pack controllers AK-PC 782AB / 781A / 772A

AK-PC 7xx A/B is complete controlling unit for:

- Capacity control of compressors for MT suction and/or LT suction line
- CO₂ gas cooler control and receiver control.
- Floating reference with regard to outside temperature
- Parallel compression IT on transcritical CO₂ system (AK-PC 782 A/B and 772A)
- CO₂ Ejectors control (AK-PC 782 A/B)
- MT/LT – coordination between controllers
- Heat recovery function

Type	Code No	Function	Number of compressors (max)	AI	DO
Integrated LON RS485 communication					
AK-PC 782A	080Z0192	Medium-large transcritical (MT-LT-IT suction)	10 × MT ; 8 × IT ; 4 × LT		
AK-PC 772A	080Z0201	Small transcritical (MT-LT-IT suction)	3 × (MT+IT) ; 2 × LT	11	8
AK-PC 781A	080Z0191	Medium-large transcritical (single suction)	10		
Integrated LAN with IP communication to AK-SM					
AK-PC 782B	080Z0202	Medium-large transcritical (MT-LT-IT suction)	10 × MT ; 8 × IT ; 4 × LT	11	8

AK-PC Pack Controller for Cascade HFC/HC/NH3- CO₂ System Pack controller AK-PC 783A

AK-PC 783A is complete regulating unit for capacity control of compressors and condensers in refrigeration plants with cascade function. The controller controls the high-pressure circuit, low-pressure circuit and cascade circuit. The controller is with oil management, simple heat recovery function and coordination between the high-pressure control and low-pressure control.

- Capacity control of up to 12 compressors (Max. 6 on each circuits or 7 MT + 5 LT or 8 MT + 4 LT)
- Up to 3 unloaders for each compressor / Up to 3 screw compressors / Digital scroll compressor
- Control of two cascade circuits in parallel
- Control for CO₂ pump system

Type	Code No	Function	Number of compressors (max)	AI	DO
Integrated LON RS485 communication					
AK-PC 783A	080Z0193	Capacity control of MT compressors, condensers, LT compressors and cascade heat exchangers	Up to 12 compressors max. 6 on each circuits or 7 MT + 5 LT or 8 MT + 4 LT	11	8

Extension modules

Variety of AK-XM modules allow to extend the number of inputs and outputs and add extra

functionality to the main controller (AK-PC or AK-CC) according to application needs.

Type	Code No	AI	DO	DI max. 80V	DI max. 260V	AO 0-10Vdc	Stepper outputs	Override switches

Mini pack controller AK-PC 572 for CO₂ transcritical booster

The controller is used for capacity regulation of compressors and gas cooler in small CO₂ refrigeration applications. The controller can handle simple MT or MT/LT booster systems with up to 5 compressors in total. Built in LCD graphic display, predefined factory settings and configuration wizard make the

operation of the controller simple and intuitive. The controller has built-in modbus data communication. In order to control the high pressure valve and receiver pressure valve, two valve driver modules, type EKE 1P, must be connected (modules ordered separately).

Type	Code No	Function	Number of compressors (max)	AI/AO	DI/DO	Stepper
Integrated Modbus communication

3. Evaporator controllers and stepper valves drivers/SH controllers

Evaporator controllers for CO₂ direct expansion evaporators
AK-CC55 cabinet/cold room controllers

ADAP-KOOL® evaporator controls enable optimal functionality of refrigeration system, and, at the same time, save energy and keep food quality in display cases and cold rooms thanks to features like defrost function, adaptive superheat control with electronically operated expansion valve such as AKV P/PS. The EEV control is based on advanced MSS (Minimum Stable Superheat) or ALC (Adaptive Liquid Control) algorithm that allows even better evaporator utilization with highly precise injection control (almost liquid condition with close to zero superheat).

AK-CC55 Compact

Controlling one evaporator. There are nine applications to select. Regulation can be performed using an AKV P/PS expansion valve or regulation with a solenoid valve together with a thermostatic expansion valve.

AK-CC55 Single Coil and Single Coil UI

Controlling one evaporator. A setting will configure inputs and outputs for the desired use. There are nine applications to choose based on system requirements. Regulation is performed using an AKV P/PS expansion valve (via SSR) or CCMT expansion valve (via stepper driver EKE).

AK-CC55 Multi Coil

Controlling one, two or three evaporators. Other software and applications are available for this. The enclosure is equipped with additional connections. There are five applications to choose based on system requirements. Regulation is performed using AKV P/PS expansion valves.

Type	Code No	Expansion valve	No. of Evaporators	DO	DI	AI	AO for EEV driver
AK-CC55 Compact	084B4081	AKV P/PS ; TEV	1	3	1(2)	5(4)	no

AK-RC Cold Room Controller IP65 protection mounting on panel outside the room

The AK-RC is a control panel for cold rooms, specially designed for safety, protection, control and ease of installation. It allows the user to control all the components on a refrigeration system: temperature,

evaporator fans, defrosting elements and room light. Controllers code numbers include in a package following sensors: 1 x 1,5m and 1 x 3m NTC 10K.

Type	Code No	Function	DO	Circuit breaker protection	Power supply
AK-RC 204B	080Z5001	Control single-phase including two sensors	4	no	230V ac
AK-RC 205C	080Z5002		5	yes	230V ac
AK-RC 305W	080Z5003	Advanced controller	5	no	100-240V ac

EKS 221	Qty		
	084N3210	3.5m NTC 10K / Thermo plastic rubber probe	1

	084N3208	8.5m NTC 10K / Thermo plastic rubber probe	50
	084N3200	3.5m NTC 10K / Stainless steel probe	150

Stepper motor valves drivers and Superheat controllers

Drivers can be used where there are requirements to accurate control of superheat.

The main advantages of this controller are:

- The evaporator is charged optimally – even when there are great variations of load and suction pressure.
- Energy savings – the adaptive regulation of the refrigerant injection ensures optimum utilisation

of the evaporator and hence a high suction pressure.

- The superheat is regulated to the lowest possible value
- Power Supply Type 24V ac/dc
- Battery Backup input 18-24V dc

Type	Code No	No of temp. sensors	NTC 10K	Pt 1000	DI Dry	AI external reference	Modbus

MMIMYK	080G0073	Gateway interface					

4. High pressure electronic expansion valves

The CCMT is an electronically operated valve designed specifically for CO₂ systems and can function either as an expansion valve, a pressure regulator for the gas cooler, or a gas bypass valve with back-pressure regulation in transcritical applications. Additional features include: compatibility with PAG, POE and PVE oils; combined butt weld and solder connections; and a light weight and compact design. The CTR

is an electrically operated 3-way valve designed specifically for operation in CO₂ systems with heat reclaim.

The ICMTS is a direct operated motorized valve designed to regulate the flow of transcritical gas or subcritical liquid from the gas cooler in a transcritical CO₂ system. The ICMTS is driven by actuator type ICAD 600A-TS.

CCMT High pressure electronic expansion valves
for R744 (CO₂) / MWP 140 bar / MOPD 90 bar

CO₂ Multi Ejectors™

MWP 140 bar / MOPDF 90 bar

The complete Danfoss Multi Ejector™ solution consists of a block of 1-6 fixed capacity ejector cartridges of different size and an AK-PC 782AB controller. The capacity is matched by using different binary combinations of the ejector cartridges activated by switching on/off the respective solenoid coils.

An ejector is a device that uses expansion energy of high pressure gas to compress/pump another fluid (gas or liquid).

- High Pressure (HP) gas ejector block is designed for transcritical CO₂ systems with parallel compressors. Allows compressing part of the MT suction gas directly to the liquid receiver. The IT compressors load is increased and MT compressors load decreased.
- Low Pressure (LP) gas ejector block is designed for transcritical CO₂ systems without parallel compressors. Under special conditions all MT suction gas is pre-compressed in the ejector block and the pressure at the MT compressors inlet is increased.

- Liquid ejector block (LE) is designed for the systems with evaporators controlled by AK-CC55 and Adaptive Liquid Control superheat algorithm. The LE ejector removes liquid separated in MT suction accumulator and pumps it into the CO₂ liquid receiver. Intended for use in Danfoss CALM (CO₂ Adaptive liquid Management) systems which allows MT compressors to operate at a higher suction pressure.

Fully integrated solution not requiring any additional components like check valves or motorized ball valves.

- Fully serviceable – wide range of spare parts and accessories.
- Easily accessible strainer / filter for fast maintenance.
- 3 x DST 310 pressure transmitters integrated.

5. Subcritical expansion valves

AKV 10P / AKV 10PS pulse width modulation electronic expansion valves for R744 (CO₂)
MWP 90 bar / MOPD 35 bar

ADAP-KOOL® valves, AKV 10P and AKV 10 PS are electronically operated expansion valves designed for refrigeration plants. The AKV 10P and AKV 10PS valves are normally controlled by a controller from Danfoss range of ADAP-KOOL® controllers, that ensures a precise liquid injection into evaporators. Precise control of liquid injection

- Optimum utilization of the evaporator

- Increased energy efficiency and COP
- Enables energy saving minimum stable superheat and adaptive defrost algorithms due to turbulent flow
- Provides excellent distribution and oil return
- Soft pulse operation makes possible to have a low noise valve
- Fully Serviceable valve

TE2 Thermostatic expansion valves for R744 (CO₂) / MWP 90bar / MOPD 60bar

With this new TE2 version for CO₂, the use of a manual TXV together with a simpler case controller, create the unique possibility for building a CO₂ system, with a lower initial investment.

- Equally applicable in MT and LT applications

- Supplied with MOP (Max. Operating Pressure)
- Interchangeable orifice assembly
- Stainless steel 1.5 capillary tube
- Connection Flare x Solder
- To enable system tightness it is mandatory to use Danfoss solder adapter

7. Sensors

Pressure transmitters

ADAP-KOOL® sensors, AKS 2050 ratiometric pressure transmitters convert measured pressure to a linear output and are designed specifically for CO₂ pressure ranges.

DST P310 with integrated pulse-snubber is designed for use in hydraulic applications with severe media influences like cavitation, liquid hammer or pressure peaks, and offers a reliable pressure measurement, even under harsh environmental conditions.

Type	Operating range (bar)	MWP bar	Compensated temp. range (°C)	G3/8A	1/4 in NPT	3/8 solder	1/4 in female flare*

Liquid level sensors

The AKS 4100 / AKS 4100U liquid level sensor is designed specifically to measure refrigerant liquid levels in a wide range of refrigeration applications. The coaxial version is designed for use with R744

(CO₂). Can be connected directly to AK-PC 7xx pack controller and used for liquid refrigerant level measurement (for example for flooded evaporator control system).

NRVT check valves for R744 (CO₂) / MWP 140 bar

NRVT piston type check valves is designed for installation in discharge line to prevent refrigerant migration to protect compressor and enable the pressure equalization of rotary compressor before

startup. In the meanwhile this valve can be used in other installation positions of CO₂ systems such as hot gas and suction lines.

Type	Code No	Connection ODF x ODF	Diff. pressure to start open bar	Fully open bar	Flow rate k _v m ³ /h	MWP bar

NRV 10s H internal relief check valves

for R744 (CO₂) / MWP 90 bar

NRV 10s H check valves for R744 (CO₂) can work as an internal relief valve when installed in parallel with GBCH shut off ball valves or service shut off

valves, at the inlet and outlet of components to be serviced. The NRV 10s H can also be used in hot gas defrosting lines.

Hermetic filter drier for R744 (CO₂)

ELIMINATOR® driers have a solid core with binding material held to an absolute minimum. For CO₂ applications Danfoss offer one type of ELIMINATOR®

core. Type DMSC and DMT driers have a core composition of 100% Molecular Sieve.

9. Pressure switches

CKB Pressure switches for R744 (CO₂) / MWP 143 bar

Safety pressure switch CKB are compact disc type pressure switches with fixed set-points for long-standing use in all CO₂ refrigeration systems. CKB safety pressure switch is used to protect compressor and the system against too high pressure.

CKB safety pressure switch provides excellent performance, ensuring minimal drift of setting and extremely stable operation over the entire lifetime. It provides automatic or manual reset limit protection. PED 2014/68/EU approved; EN 12263.

KP 6 Pressure switches

MWP 46.5 bar

KP pressure switch can be used as a protection in suction line of LT compressor in CO₂ systems (booster & cascade).

PED 2014/68/EU approved; EN 12263

KP 6W cut in again automatically when the pressure

has fallen to the set value minus the differential. KP 6B can be cut in manually with the external reset button when the pressure in KP6 has fallen 4 bar under the set value.

Type	Code No	Pressure settings bar		Reset	Contact system	Connection	MWP bar

10. Industrial refrigeration control valves for CO₂ systems

ICSH Two-step opening of hot gas lines when defrosting or when equilizing high pressures with CO₂ (R744) / MWP 65 bar

ICSH is used in hot gas lines for the opening of hot gas defrost flow to the evaporator in 2 steps. Both steps are activated by a controller or a PLC energizing the magnetic coils in a time delay sequence.

- Step 1 (approx. 20% of full flow) is to allow a smooth pressure build-up in the evaporator

- The subsequent step 2 opens the flow to 100% to get the full defrost capacity.
- Can also be applied for soft opening of suction line after defrosting. See data sheet for all variants
- Max. working pressure: 65 bar (943 psi)
Temperature range: -60 °C / +120 °C
(-76 °F / +248 °F).

Type	Flow rate k _v m ³ /h	Connections			
		Butt-weld DIN (EN 10220)		Butt-weld ANSI (B 36.10)	
ICSH 25-25	11.5	25 D (1in)	32 D (1½in)	25 A (1in)	32 A (1½in)

ICS with CVP for regulating the pressure in hot gas drain lines or when regulating suction pressures in CO₂ (R744) / MWP 65 bar

CVP is a constant-pressure pilot valve with 2 setting ranges for CO₂ covering settings of 4 to 52 bar. This pilot valve is used for maintaining a constant pressure on the inlet side of the main valve. When a CVP is mounted in a CVH housing, it can be used as a separate constant-pressure valve or a pressure relief valve (e.g. to prevent hydraulic overpressure in an entrapped liquid). Can also be applied for soft

opening of suction line after defrosting. See data sheet for all variants

- Max. working pressure: 65 bar (943 psi)
Temperature range: -60 °C / +120 °C
(-76 °F / +248 °F)

**To complete ICS+CVP it is necessary to order:
ICS housing and pilot valve CVP**

ICF valve stations for DX systems, for R744 (CO₂) / MWP 52 bar

ICF valve station incorporates several functions in one housing, which can replace a series of conventional mechanical, electro-mechanical and electronically operated valves. ICF houses come with 2, 4 and 6 stations. This brings simplicity and value to the design, installation, service and maintenance. The ICF valve stations are designed for

low and intermediate pressures. See data sheet for all variants.

- Application 5: Liquid injection (expansion) with motor valve
- Application 12: Liquid injection (expansion) with PWM

ICF valve stations for liquid drain lines for R744 (CO₂) / MWP 52 bar / MOPD 36 bar

ICF valve station incorporates several functions in one housing, which can replace a series of conventional mechanical, electro-mechanical and electronically operated valves. ICF houses come with 2, 4 and 6 stations. This brings simplicity and value to the design, installation, service and maintenance. The ICF valve stations are designed for low and intermediate pressures. See data sheet for all variants.

Liquid drain method is the most energy efficient method. The method ensures that only liquid condensate is drained back to the suction accumulator and minimizing the hot gas consumption.

Application 102D2: Liquid drain with ICFD float valve.

11. Industrial refrigeration line components for CO₂ systems

SVA-140B Shut-off valve

for R744 (CO₂) / MWP140 bar / MOPD 110 bar

The new 140 bar manual valve range for Industrial CO₂ Trans-critical Systems is based on the successful modular Standard SVL platform. The same flexibility, simplicity and efficiency are features offered in this new series. See data sheet for all variants.

- Applicable to: R744 (CO₂) Sub and Trans critical

- Max. working pressure: 140 bar (2030 psi)
- Max. differential pressure: 110 bar (1595 psi)
- Temperature range: -40 °C to +150 °C (-40 °F to + 302 °F)
- Fast and easy valve overhaul service. It is easy to replace the top part and no welding is needed

FIA 140B Strainer

for R744 (CO₂) / MWP 140 bar

- Applicable to: R744 (CO₂) Sub and Trans critical
- Max. working pressure: 140 bar (2030 psi)
- Temperature range: -40 °C to +150 °C (-40 °F to + 302 °F)
- Fast and easy valve overhaul service. It is easy to replace the top part and no welding is needed
- Two types of strainer inserts are available:
 - A plain insert of stainless steel
 - A pleated insert with extra large surface, which

ensures long intervals between cleaning and low pressure drop

- A large capacity filter bag can be inserted for cleaning plant during commissioning

To complete FIA-140B Strainer it is necessary to order: Strainer housing and strainerinsert.

SVL 65 parts program valves for R744 (CO₂) / MWP 65 bar

SVL 65 parts program you can build all the functions Shut-Off, Stop/Check, Check, Regulating valve and stainlers into one shared valve house. The

characteristics of the 65 bar parts program makes it perfectly suited for the requirements of sub critical CO₂ (R744) systems. See data sheet for all variants.

Parts program **To complete any 65 bar valve function it is necessary to order: Housing and Function module.**

SNV-ST 140B Service valve

for R744 (CO₂) / MWP 140 bar

SNV stop gauge are designed as service valves with a very sturdy construction. SNV-ST are made in steel approved for low temperature operations. The new SNV-ST for 140B is specifically designed to meet the

increasing market demand for higher pressures in sub and transcritical applications. Ready for CO₂ and future high-pressure refrigerants with maximum working pressure of 140 Bar.

Type	Code No	Bottom branch	"Bottom lenght"	Side branch	Equipment
SNV-ST	148B0082	1/4 MPT	Standard	1/4 FPT	Cap

SNV-ST and SNV-SS 65B Service valve

for R744 (CO₂) / MWP 65 bar

SNV stop gauge are designed as service valves with a very sturdy construction. SNV-ST are made in steel approved for low temperature operations, SVA-SS are stainless steel versions. SNV-ST and SNV-SS

are available in cutting ring, welded and threaded connection as well as extended branch length configuration.

Type	Code No	Bottom branch	Bottom lenght	Side branch	Version

13. Heat recovery units

The Danfoss Heat Recovery Unit helps to eliminate the technical challenges of managing heat recovery. The HRU is an integrated solution managing and

buffering the heat from the CO₂ refrigeration pack – to be reused for space heating, hot tap water, or even sold to neighbors or district heating grids.

Application

A1

Number of buffer tanks: 2

Connection to external heat source: Indirect connection.

Possibility of heat resale.

Heating demand		
Capacity ⁽¹⁾	min. Flow	max. Flow
kW	m ³ /h	m ³ /h
up to 22	0.2	0.62
up to 54	0.43	1.55
up to 85	0.65	2.44
up to 135	1.5	3.87
up to 216	2.5	6.2
up to 337	4	9.66

14. CO₂ BOCK® subcritical and transcritical compressors

Subcritical CO₂ BOCK® compressors

Type	Displacement 50 Hz	Nominal capacity LT	Number of cylinders	Pressure LP/HP	Version	ID
HGX12e CO ₂	1.6 - 2.8 m ³ /h	2.7 - 90 kW	2	40/55 bar	S	varies*
HGX22e CO ₂	7.5 - 11.2 m ³ /h		2	40/55 bar	S	varies*
HGX34e CO ₂	12.7 - 22.3 m ³ /h		4	40/55 bar	S	varies*
HGX44e CO ₂	27.7 - 49.2 m ³ /h		4	30/55 bar	S	varies*
HGX12e CO ₂ LT	1.7 - 3.5 m ³ /h	2.7 - 23 kW	2	100/100 bar	ML, S	varies*
HGX24e CO ₂ LT	4.6 - 12.7 m ³ /h		4	100/100 bar	ML, S	varies*

Transcritical CO₂ BOCK® compressors

Type	Displacement 50 Hz	Nominal capacity MT	Number of cylinders	Pressure LP/HP	Version	ID
HGX12 CO ₂ T	1.7 - 3.5 m ³ /h	3 - 85 kW	2	110/150 bar	ML, S, SH	varies*
HGX24 CO ₂ T**	4.6 - 9.4 m ³ /h		4	110/150 bar	ML, S, SH	varies*
HGX34 CO ₂ T**	9.9 - 25.5 m ³ /h		4	110/150 bar	ML, S, SH	varies*
HGX46 CO ₂ T**	24.4 - 38.2 m ³ /h		6	110/150 bar	ML, S, SH	varies*

*Different compressors accessories are available on demand.

**Compressors are available also with high efficiency LSPM motor technology.

Entire CO₂ compressors range is available also with UL approval.

Nominal capacity LT:

Evaporating Temperature at 50 Hz: -35°C, Condensing: -5 °C. Suction gas superheat: 10K, subcooling: 0K

Nominal capacity MT:

Evaporating Temperature at 50 Hz: -10°C, Gas cooler outlet: +35°C/90 bar. Suction gas superheat: 10K

For more information please contact your local Danfoss sales representative.

Forward Naturally

As we transition toward a more environmentally friendly future, your refrigerant choice becomes an important factor for your business and the planet. CO₂ is a natural cooling agent that delivers sustainable and energy-efficient refrigeration in everything from warehouses to ice machines. Allowing businesses to move forward naturally.

CO₂ has several unique thermo-physical properties making it an ideal refrigerant:

- Excellent heat transfer coefficient
- High energy content
- Relatively insensitive to pressure losses
- Very low viscosity of the liquid phase

In practical applications, CO₂ systems deliver a very high-performance output. The main reasons are:

- Superior heat exchange
- Smaller piping sizes
- Low pumping power as secondary fluid
- Superior heat recovery
