

Cómo configurar ETS L como válvula definida por el usuario en los modelos EKE 1A, B, C, D para control SH y controladores paso a paso EKF 1A, 1B

Configurando EKE

PASO 1: Conecte el EKE a la herramienta para PC Koolprog o MMIGRS2 (instrucciones al final del documento)

PASO 2: Coloque el interruptor principal (parámetro SW R012) del EKE en OFF

PASO 3: Vaya a la pestaña de configuración de la válvula, cambie I067 como UserDef.

PASO 4: Utilice la configuración que se muestra a continuación según el tipo de válvula

PASO 5: Cambie el interruptor principal (parámetro SW R012) del EKE a ON.

Parámetros de configuración:

ETS 175L/250L/400L + EKE

| | | | | | |
|------|----------------------------------|-----|----------|-----------------------|----------|
| I067 | Valve configuration | | no valve | <input type="radio"/> | UserDef |
| I027 | Valve motor type | | Unipolar | <input type="radio"/> | Bipolar |
| I028 | Valve drive current | 10 | 10 mA | <input type="radio"/> | * 283 mA |
| I029 | Valve step positioning | | Fullstep | <input type="radio"/> | Auto |
| I030 | Valve total steps | 1 | 1 stp | <input type="radio"/> | 3810 stp |
| I031 | Valve speed | 10 | 10 PPS | <input type="radio"/> | 200 PPS |
| I032 | Valve start speed | 1 | 20 % | <input type="radio"/> | 100 % |
| I061 | Valve emergency speed | 50 | 100 % | <input type="text"/> | 100 % |
| I062 | Valve acceleration current | 100 | 100 % | <input type="text"/> | 100 % |
| I063 | Valve acceleration time | 10 | 10 ms | <input type="radio"/> | 100 ms |
| I077 | Valve holding current | 0 | 0 % | <input type="radio"/> | 20 % |
| I064 | Valve step mode | | 1/8 | <input type="radio"/> | .full |
| I065 | Valve duty cycle | 5 | 100 % | <input type="text"/> | 100 % |
| I069 | Valve OD during stop | 0 | 0 % | <input type="text"/> | 0 % |
| I070 | Start backlash | 0.0 | 0.0 % | <input type="text"/> | 0.0 % |
| I071 | Compensation backlash | 0.0 | 0.0 % | <input type="text"/> | 0.0 % |
| I072 | Overdrive | 0.0 | 4.0 % | <input type="radio"/> | 5 % |
| I073 | Overdrive enable OD | 0 | 0 % | <input type="text"/> | 0 % |
| I074 | Overdrive block time | 0 | 10 min | <input type="text"/> | 10 min |
| I076 | Valve excitation time after stop | 0 | 10 ms | <input type="radio"/> | 12 ms |

*La corriente máxima de 283 mA es igual a la corriente de disparo de 200 mA; Esta nota se aplica a todas las configuraciones en las siguientes páginas.

Configurando EKF

PASO 1: Conecte EKF a la herramienta para PC Koolprog a través de EKA200

PASO 2: Coloque el interruptor principal (parámetro SW R012) en el EKF en APAGADO

PASO 3: Vaya a la sección de configuración básica del controlador y cambie la selección de válvula (B101/B201) a definida por el usuario

PASO 4: Vaya a la sección de configuración del controlador de válvula

PASO 5: Utilice la configuración que se muestra a continuación según el tipo de válvula

PASO 6: Cambie el interruptor principal (parámetro SW R012) en el EKF a ON.

Parámetros de configuración:

* Para el uso de ETS en sistemas sin aceite y de alta temperatura (500 L), se puede utilizar un ciclo de trabajo del 100 %.

Cuando se utiliza la herramienta para PC KoolProg para configurar productos EKE o EKF

- 1) Puede guardar el archivo en su PC usando el botón "Guardar" o "Guardar como" en la esquina superior izquierda. Esta opción también está disponible en la función de programación fuera de línea de KoolProg:

- 2) Haga clic en la función Copiar al dispositivo:

- 3) Haga clic en la función Copiar al dispositivo: 3) Busque el archivo guardado

Select file: **BROWSE**

- 4) El archivo del programa se copiará al controlador y se mostrará una notificación en KoolProg al finalizar.

Al configurar directamente usando MMIGRS2

Debes seguir las siguientes pantallas.

Presione el botón Enter durante unos segundos. Ingresando contraseña

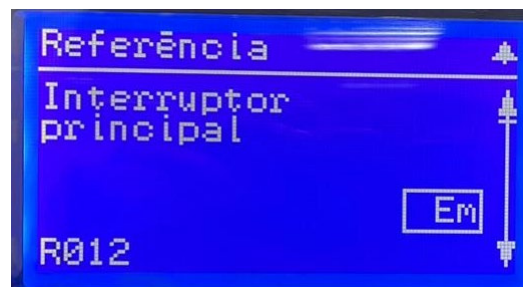

Accede al menú "Referencia"

Deshabilitar el parámetro "Interruptor Principal" – R012

Después de desactivar R012, debe regresar al menú principal e ir a "IO Config".

Tras ello accedemos al menú "Config. de la válvula"

Dentro de los ajustes de válvulas accedemos al primer parámetro donde especificamos el tipo de válvula (I067), y lo cambiamos a "UserDef". Luego de validar esta modificación, los demás parámetros de configuración quedarán liberados, debiendo ajustar los valores según el modelo y listas presentadas anteriormente. Luego de completar la configuración, se debe regresar el parámetro R012 a la opción "On".
