

Data sheet

Indirect servo-operated 2/2-way solenoid valves Type EV220W 10 - EV220W 50

EV220W is a range of compact indirect servooperated 2/2 way solenoid valves with connections from 3/8" to 2", especially designed for industrial use within a limited space.

This range has been designed specially for the maintenance, repair and operations markets, which demand an easy and reliable valve that is easy to setup and use.

Features and versions

- For water, oil, compressed air and similar neutral media
- DN 10 50
- Differential pressure: From 0.3 16 bar
- Media temperatures: From -10 80 °C
- Viscosity: Up to 50 cSt
- Ambient temperatures: From -40 50 °C
- Clip-on coil
- Enclosure: IP65

- NO version, standard for 3/8" 2" valve sizes
- NC version, standard for 3/8" 2" valve sizes
- Complete coil voltage: 230 V AC, 24V AC, 24 V DC

In water applications, exercise the valves at least once every 24 hours, meaning change the state of the valve. The valve exercise will minimize the risk of the valve sticking due to calcium carbonate, zinc or iron oxide build-up.

Function, NC

- 1. Coil 2. Armature spring 3. Armature
- 4. Pilot orifice
- 5. Diaphragm
- 6. Equalizing orifice
- 7. Main orifice

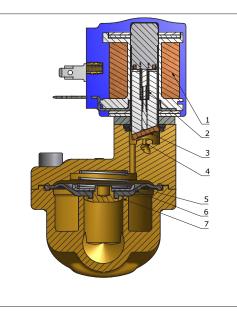

Function, NO

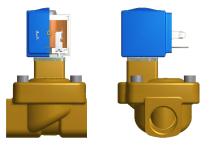

Coil voltage disconnected

When voltage is disconnected, the armature spring (2) presses the armature (3) down against the pilot orifice (4). Pressure builds up over the diaphragm (5) via the equalizing orifice (6). The diaphragm closes the main orifice (7) as soon the pressure over the diaphragm equals the nlet pressure. The valve stays closed for as long s voltage remains disconnected.

Coil voltage connected (open) When voltage is applied to the coil (1), the pilot orifice (4) is opened. Since the pilot orifice is larger than the equalizing orifice (6), pressure the diaphragm (5) falls and the diaphragm is lifted clear of the main orifice (7). The valve stays open for as long as the required minimum differential pressure is present and voltage is applied to the coil.

In principle the function involves the opposite valve positions to those above for applied and disconnected voltage respectively.
