Pressure transmitters for industrial applications MBS 4050

The standard heavy duty pressure transmitter MBS 4050 with integrated pulse-snubber is designed for use in industrial applications with severe media influences like cavitation, liquid hammer or pressure peaks and offers a reliable pressure measurement, even under harsh environmental conditions.

The flexible pressure transmitter programme covers different output signals, absolute or gauge (relative) versions, measuring ranges from 0-1 to 0-600 bar and a wide range of pressure and electrical connections.

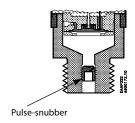

Excellent vibration stability, robust construction, and a high degree of EMC / EMI protection equip the pressure transmitter to meet the most stringent industrial requirements.

Features

- Designed for use in severe industrial environments
- Resistant to cavitation, liquid hammer and pressure peaks
- Enslosure and wetted parts of acid-resistant stainless steel (AISI 316L)
- Pressure ranges in relative (gauge) or absolute from 0 up to 600 bar
- All standard output signals:
 4 20 mA, 0 5 V, 1 5 V, 1 6 V, 0 10 V
- A wide range of pressure and electrical connections
- Temperature compensated and laser calibrated
- For use in Zone 2 explosive atmosphere

Application and media conditions

Application

Cavitation, liquid hammer and pressure peaks may occur in liquid filled hydraulic systems with changes in flow velocity, e.g. fast closing of a valve or pump starts and stops.

The problem may occur on the inlet and outlet side, even at rather low operating pressures.

Media condition

Clogging of the nozzle may occur in liquids containing particles. Mounting the transmitter in an upright position minimizes the risk of clogging, because the flow in the nozzle is limited to the start-up period until the dead volume behind the nozzle orifice is filled. The media viscosity has only little effect on the response time. Even at a viscosities up to 100 cSt, the response time will not exceed 4 ms.

Technical data

Performance (EN 60770)

Accuracy (incl. non-linearity, hysteresis and repeatability)		< ± 0.5% FS (typ.)
		< ± 0.8% FS (max.)
Non-linearity BFSL (confor	mity)	≤ ± 0.2% FS
Hysteresis and repeatabilit	ty	≤ ± 0.1% FS
Thormal zoro point shift		≤ ± 0.1% FS / 10K (typ.)
Thermal zero point shift		≤ ± 0.2% FS / 10K (max.)
Thormal concitivity (cnan)	chift	≤ ± 0.1% FS / 10K (typ.)
Thermal sensitivity (span) shift		≤ ± 0.2% FS / 10K (max.)
Dosnonso timo	Liquids with viscosity < 100 cSt	< 4 ms
Response time	Air and gases	< 35 ms
Overload pressure (static)		6 × FS (max. 1500 bar)
Burst pressure		6 × FS (max. 2000 bar)
Durability, P: 10 – 90% FS		>10×10 ⁶ cycles

Electrical specifications

Nom. output signal (short-circuit protected)	4 – 20 mA	0-5 V, 1-5 V, 1-6 V	0-10 V
Supply voltage [U _B], polarity protected	10-30 V	9-30 V	15-30 V
Supply – current consumption	_	≤ 5 mA	≤ 8 mA
Supply voltage dependency	≤ ± 0.05% FS / 10 V	≤ ± 0.05% FS / 10 V	≤ ± 0.05% FS / 10 V
Current limitation	28 mA (typ.)	_	
Output impedance	-	< 25 Ω < 25 Ω	
Load [R _L] (load connected to 0 V)	$R_{L} \le (U_{B} - 10V) / 0.02 A$	$R_L \ge 10 \text{ k}\Omega$	$R_L \ge 15 \text{ k}\Omega$
