

Data Sheet

Shut-off valves
Type **SVA-S** and **SVA-L**

65 bar version for all industrial refrigeration and heat pump applications

The new 65 bar SVL range for Industrial Refrigeration and Heat Pumps is based on the successful modular Standard SVL platform. The same flexibility, simplicity and efficiency are features offered in this new series.

The SVA valves are designed to give favorable flow characteristics and are easy to dismantle and repair when necessary. The valve cone is designed to ensure perfect closing and withstand a high system pulsation and vibration, which can be present specifically in the discharge line.

The valves are available from a parts program consisting of:

- Valve housing with DIN or ANSI butt-weld connections and DIN or ASME hard soldering (brazing) connections in angle or straightway and in a variety of sizes
- The function module in Standard neck (SVAS) and Long neck (SVA-L)

Further, SVA-S is available as complete valves with ANSI butt-weld connection.

Function modules (Top Complete) for the SVA Stop valves DN 50 to DN 100 are available in a special high temperature version called SVA-65BT.

Features

- Modular Concept:
 - Each valve housing is available with DIN and ANSI butt weld connection and in several different sizes
 - Possible to convert SVA-S or SVA-L to any other product in the Flexline™ SVL family (regulating valve, check & stop valve, check valve or strainer) just by replacing the complete top part
- Fast and easy valve overhaul service. It is easy to replace the top part and no welding is needed
- Optional accessories:
 - Heavy duty industrial hand wheel for frequent operation
 - Cap for infrequent operation
- Available in angleway and straightway versions with Standard neck or Long neck (DN 15 to DN 40) for insulated systems
- Each valve type is clearly marked with type, size and performance range
- The valves and caps are prepared for sealing, to prevent operation by unauthorized persons, using a seal wire
- Internal metal backseating:
 - DN 6-65 (1/4-2 1/2 in.)
- Internal PTFE backseating:
 - DN 80-200 (3-8 in.)
- Can accept flow in both directions
- Housing and bonnet material is low temperature steel according to requirements of the Pressure Equipment Directive and other international classification authorities
- Classification: DNV, CRN, BV, EAC etc. To get an updated list of certification on the products please contact your [local Danfoss Sales Company](#)

Media

Refrigerants

Applicable to HCFC, HFC, R717 (Ammonia) and R744 (CO₂). For further information please see installation guide for SVA.

New refrigerants

Danfoss products are continually evaluated for use with new refrigerants depending on market requirements.

When a refrigerant is approved for use by Danfoss, it is added to the relevant portfolio, and the R number of the refrigerant (e.g. R513A) will be added to the technical data of the code number. Therefore, products for specific refrigerants are best checked at store.danfoss.com/en/, or by contacting your local Danfoss representative.

Product specification

Design

Housing

Made of special, cold resistant steel

Valve cone

The valve cone can be turned on the spindle, thus there will be no friction between the cone and the seat when the valve is opened and closed and the special design will avoid cone spin due to pulsation and vibration when the valve is in open position. A teflon tightening ring provides perfect sealing with minimum closing force.

Spindle

Made of polished stainless steel, ideal for leap seal sealing.

Packing gland

The low temperature packing gland ensures a perfect tightness. The packing glands are equipped with a scraper ring to prevent penetration of dirt and ice into the packing gland.

Table 1: Technical data

Part	Temperature range	Max. working pressure
Housing DN50 -DN100	-60 °C to +190 °C (-76 °F to + 374 °F)	65 bar (943 psi)
Housing other than DN50 -DN100	-60 °C to +150 °C (-76 °F to +302 °F)	65 bar (943 psi)
Function module standard ⁽¹⁾	-60 °C to +150 °C (-76 °F to +302 °F)	65 bar (943 psi)
Function module high temp SVA-65BT	0 °C to +190 °C (32 °F to + 374 °F)	65 bar (943 psi)

⁽¹⁾ For special and/or high demanding applications/conditions which run with high constant temperatures, it is recommended to replace the packing gland with "HL Packing Gland" as spare part. For more information, please, contact your local Danfoss sales representative.

Installation

Figure 1: Example of Marking Ring

The valve is designed to withstand high internal pressure. However, the piping system in general should be designed to avoid liquid traps and reduce the risk of hydraulic pressure caused by thermal expansion.

It is recommended that the valves be installed in the direction of flow indicated by the arrow on the valve body. The valve can be installed in the opposite direction but this slightly reduces the k_v -value (C_v -value).

Maximum opening and closing pressure differential (for sizes 100 to 200)

Figure 2: Flow direction

The maximum opening pressure differential is equal to the maximum pressure difference between inlet and outlet in the flow direction where the valve can be opened using normal hand force without damaging the valve.

The maximum closing pressure differential is equal to the maximum pressure difference between inlet and outlet in the flow direction where the valve is sealing according to specifications.

The maximum opening and closing pressure differentials are as default equal to the maximum operating pressure (PS or MWP) for valve sizes up to and including DN 50.

For valve sizes of DN 65(80) or larger than DN 65(80) the opening and closing pressure differential depends on the flow direction as shown below. Note that the default flow direction indicated by the flow arrow is P1 -> P2.

Table 2: Flow direction

Valve size [DN]	Flow direction		
	Maximum opening and closing pressure differential	Maximum closing pressure differential	Maximum opening pressure differential
		P1 → P2	P2 → P1
65(80)	60 bar / 870 psi	65 bar / 943 psi	60 bar / 870 psi
100	44 bar / 638 psi	65 bar / 943 psi	44 bar / 638 psi
125	33 bar / 478 psi	65 bar / 943 psi	33 bar / 478 psi
150	21 bar / 304 psi	65 bar / 943 psi	21 bar / 304 psi
200	14 bar / 203 psi	65 bar / 943 psi	14 bar / 203 psi

Online support

Danfoss offers a wide range of support along with our products, including digital product information, software, mobile apps, and expert guidance. See the possibilities below.

The Danfoss Product Store

The Danfoss Product Store is your one-stop shop for everything product related—no matter where you are in the world or what area of the cooling industry you work in. Get quick access to essential information like product specs, code numbers, technical documentation, certifications, accessories, and more.

Start browsing at store.danfoss.com.

Find technical documentation

Find the technical documentation you need to get your project up and running. Get direct access to our official collection of data sheets, certificates and declarations, manuals and guides, 3D models and drawings, case stories, brochures, and much more.

Start searching now at www.danfoss.com/en/service-and-support/documentation.

Danfoss Learning

Danfoss Learning is a free online learning platform. It features courses and materials specifically designed to help engineers, installers, service technicians, and wholesalers better understand the products, applications, industry topics, and trends that will help you do your job better.

Create your Danfoss Learning account for free at www.danfoss.com/en/service-and-support/learning.

Get local information and support

Local Danfoss websites are the main sources for help and information about our company and products. Find product availability, get the latest regional news, or connect with a nearby expert—all in your own language.

Find your local Danfoss website here: www.danfoss.com/en/choose-region.

Spare Parts

Get access to the Danfoss spare parts and service kit catalog right from your smartphone. The app contains a wide range of components for air conditioning and refrigeration applications, such as valves, strainers, pressure switches, and sensors.

Download the Spare Parts app for free at www.danfoss.com/en/service-and-support/downloads.

Coolselector®2 - find the best components for you HVAC/R system

Coolselector®2 makes it easy for engineers, consultants, and designers to find and order the best components for refrigeration and air conditioning systems. Run calculations based on your operating conditions and then choose the best setup for your system design.

Download Coolselector®2 for free at coolselector.danfoss.com.
