

Data Sheet

UnoFloor

Light / Light C / Light CI

Description

Product

Danfoss prefabricated stainless steel distribution units for floor heating in cabinets.

The Danfoss UnoFloor Light series are preassembled stainless steel distribution units installed in a cabinet for in-wall installation.

These solutions make it easier for the installer to order a ready-made plug & play construction for mounting of distribution pipes for the building section.

The units are available as standard solutions with 4 to 12 connections and include manual air vent and drain valve. In addition the solutions include a flow meter to maintain the designated flow rate.

The UnoFloor Light stations are all for left connections.

UnoFloor comes wired and premounted. UnoFloor Light C includes Danfoss Icon™ 230V Wiring Center and Light Ci comes with Danfoss Icon™ 24V Master Controller.

The SSM stainless-steel manifold is used for controlling water flow. Each tube of the floor heating system is connected to the manifold, thus making it possible to control water flow or heat supply to each room in the building individually.

Features & benefits

- Plug & Play construction
- Durable stainless steel distribution unit
- Minimum space required for installation
- In-wall cabinet ensures minimum time required for installation
- Pre-mounted ensures minimal risk of installation faults
- Correct heat distribution, even under partial load
- App solutions for installer and end-user (Light CI)

Applications

- Heat regulation in floor heating systems

Overview**Product portfolio**

Distribution units	
Light	 Is delivered with flow meter, without controller and thermo actuators, but prepared for mounting a controller and actuators of your choice.
Light C	 Is delivered with flow meter and fitted with an Icon™ wiring center 230V and thermoactuators TWA NC for control of the floor heating system. Wired room thermostats.
Light CI	 Is delivered with flow meter and fitted with an Icon2™ master controller 230V and thermo-actuators TWA NC for control of the floor heating system. Wireless or wired room thermostats. App based installation guide for the installer with the option of an installation report as documentation. By purchasing an Ally gateway, the end-user can control the room heating in his home via the Danfoss Ally app.

Floor Heating Manifolds	
SSM	 <p>The SSM manifold is used for controlling water flow in under-floor heating system. Each tube of the floor heating system is connected to the manifold, thus making it possible to control water flow or heat supply to each room in the building individually.</p>
Connection boxes	<p>ICON™ Wiring Center (UnoFloor Light C)</p>   <p>Danfoss ICON™ Wiring Center is a connection box for use in hydronic floor heating using 230V thermostats and actuators. Can connect up to 14 thermal actuators from up to 8 room thermostats. It is provided with 230V circulation pump output and voltage-free relays for controlling a boiler. The relays are activated when one or more thermostats require heat.</p>
ICON2™ Master Controller (UnoFloor Light CI)	 <p>Danfoss ICON2™ Master controller is a control box for use in hydronic floor heating using wireless or wired thermostats and 230V actuators.</p> <ul style="list-style-type: none"> Automatic balancing (PWM+), which ensure that hydraulic balancing of the system is done by the master controller based on the actual room demand. Requires no pre-setting on the manifold On/Off control possibility Possibility to combine wired and wireless thermostats in same installation
Wireless control system	<p>Danfoss Ally™ Gateway</p>  <p>The Danfoss Ally™ Gateway is a programmable, wireless control system that connects all the Danfoss Ally™ devices to the internet and intelligently controls your heating via a free app downloadable from Google Play and App Store. The power supply and LAN cable for the internet connection are included.</p> <p>By purchasing an Ally gateway, the end-user can control the room heating in his home via the Danfoss Ally app.</p>

Tender text

Pre-assembled underfloor heating balancing and control distribution unit must come wired and pre-mounted, fitted in in-wall cabinet.

Cabinet must be painted in white (RAL 9016), 769 mm in height, up to 1000 mm in width and 88 mm in depth.

The manifold is used for heat regulation in floor heating systems. Each circuit in the floor heating system is connected to the manifold, which makes it possible to regulate the heat supply to each room in the building independently.

The manifold shall consist of a flow and return manifold where the flow manifold must be able to close each circuit independently. The return manifold must be equipped with presetting valves, ensuring optimal balancing of the system. Balancing of the floor heating system shall be done on a swivel scale ranging from 1-7 and N so that the value can be read and checked after commissioning. Valves shall be controlled electronically by thermal actuators installed without adapters.

The manifold must be provided in modules of up to 12 outlets with air vent and drain / fill function valve. Ball valves must be available as an option for positive shut-off between manifold and system.

The manifold must be made of stainless steel and have the following specifications:

- Maximum flow temperature: 60 °C
- Maximum differential pressure: 0,6 bar
- Maximum operating pressure with flow meter: 6 bar
- Maximum operating pressure, without flow meter: 10 bar
- Max Kv setting of the valve (N): 0,97 m

Light C:

It must be possible to connect the room thermostats to the NC actuators via a connection box. The connection box must have not less 8 channels and 14 actuator outputs, have two potential free relays: one for the pump and one for the boiler. Distribution voltage: 230 V

AC. Voltage: 230 V AC, max. power per output: 3 W.

The actuator must be premounted on a valve. The actuator receives a signal from the room thermostat. Based on the signal, it opens and closes the valve which makes it possible to regulate the energy supply to each room in the building independently. For easy and secure installation, the actuator must be delivered as one part (no adapter) and mounted on the manifold by use of an Allen screw.

Light Cl:

It must be possible to connect the room thermostats to the NC/NO actuators via a connection box.

The connection box must have not less 15 channels and 15 actuator outputs, have potential-free relay, one micro disconnection output and permanent 230 V (max 50W) output. Supply voltage: 230 V AC. Output voltage for actuators: 230 V, max. power per output: 2 W. It must be possible to set up to 15 actuators for 1 room thermostat. It must be possible to control system by smartphone app and have pre-set work profiles with applications. Connection box must have possibility to be upgraded to wireless solution by Wireless module. For accurate hydronic control, automatic heat load control feature must be available.

The actuator must be premounted on a valve. The actuator receives a signal from the room thermostat. Based on the signal, it opens and closes the valve which makes it possible to regulate the energy supply to each room in the building independently. For easy and secure installation, the actuator must be delivered as one part (no adapter) and mounted on the manifold by use of an Allen screw.

Online support

Danfoss offers a wide range of support along with our products, including digital product information, software, mobile apps, and expert guidance. See the possibilities below.

The Danfoss Product Store

The Danfoss Product Store is your one-stop shop for everything product related—no matter where you are in the world or what area of the cooling industry you work in. Get quick access to essential information like product specs, code numbers, technical documentation, certifications, accessories, and more.

Start browsing at store.danfoss.com.

Find technical documentation

Find the technical documentation you need to get your project up and running. Get direct access to our official collection of data sheets, certificates and declarations, manuals and guides, 3D models and drawings, case stories, brochures, and much more.

Start searching now at www.danfoss.com/en/service-and-support/documentation.

Danfoss Learning

Danfoss Learning is a free online learning platform. It features courses and materials specifically designed to help engineers, installers, service technicians, and wholesalers better understand the products, applications, industry topics, and trends that will help you do your job better.

Create your Danfoss Learning account for free at www.danfoss.com/en/service-and-support/learning.

Get local information and support

Local Danfoss websites are the main sources for help and information about our company and products. Find product availability, get the latest regional news, or connect with a nearby expert—all in your own language.

Find your local Danfoss website here: www.danfoss.com/en/choose-region.

Spare Parts

Get access to the Danfoss spare parts and service kit catalog right from your smartphone. The app contains a wide range of components for air conditioning and refrigeration applications, such as valves, strainers, pressure switches, and sensors.

Download the Spare Parts app for free at www.danfoss.com/en/service-and-support/downloads.

Coolselector®2 - find the best components for your HVAC/R system

Coolselector®2 makes it easy for engineers, consultants, and designers to find and order the best components for refrigeration and air conditioning systems. Run calculations based on your operating conditions and then choose the best setup for your system design.

Download Coolselector®2 for free at coolselector.danfoss.com.
