| AXT211F110 230 V on/off AXS215SF122 24 V 0-10 V | No adapters needed, move DIP switch 2 to ON to decrease stroke to 3,2 mm | No adapters needed, move DIP switch 2 to OFF in order to keep stroke at 4,5 mm (opens 100 %) |
| Theben | | |

* For modulating version (SSA61) settings on AB-QM DN 10-20 should be at least 70 %, while on AB-QM DN 25-32 at least 35 %. Those settings will allow stroke of 1,5 requested to calibrate (closing and full open position) the actuator.

In order to secure compatibility between valve and actuator it is recommended that actuator supplier is asked to provide exact definition of maximum stroke and lower & upper point relative to spindle- nut position of the actuator to be used.
