

Data Sheet

Pilot valve Type **CVP, CVPP, CVC** **CVE, EVM** and **CVH**

Intended for mechanical control of a main valve

Pilot valves are intended for mechanical control of a main valve and are ready for direct installation in the top cover of the main valve.

Small capacities can be controlled by the pilot valve directly without a main valve when installed in the matching CVH housing.

The extensive range of Danfoss pilot valves include:

- Constant-pressure pilot valve, type CVP
- Differential-pressure pilot valve, type CVPP
- Pressure-operated pilot valve with reference pressure connection, type CVC
- Electronically operated constant-pressure pilot valve, type CVE
- Solenoid pilot valve, type EVM (NC)
- Solenoid pilot valve, type EVM (NO)
- Housing, type CVH for pilot valves, for mounting in external pilot lines

Features

- Applicable to HCFC, non flammable HFC, R717 (Ammonia) and R744 (CO₂). The use of Pilots with flammable hydrocarbons is not recommended
- Extremely accurate pressure and temperature control.
- The pilot valves can be screwed directly into the main valve, thus avoiding the necessity of welding, soldering and separate pilot lines.
- The pilot valves can be mounted directly in the ICS, PM or ICF valve or it can be connected via an external pilot line and a CVH housing.
- All pilot valves can be used on all sizes of main valves.
- Several pilot valves can be connected in series or in parallel to provide many functions in the same ICS or ICF valve.
- All pilot valves are delivered with gaskets.

Functions

Constant-pressure pilot valve, type CVP

Figure 1: CVP

CVP is a constant-pressure pilot valve for a max. working pressure (MWP) from 52 bar (754 psig) to 65 bar (943 psig)⁽¹⁾ and with 3 setting ranges covering settings of -0.66 to 52 bar (19.5 in. Hg to 754 psig). This pilot valve is used for maintaining a constant pressure on the inlet side of the main valve.

When a CVP is mounted in a CVH housing, it can be used as a separate constant-pressure valve or a pressure relief valve (e.g. to prevent hydraulic overpressure in an entrapped liquid).

i NOTE:

The CVP pilot can be used for most applications in the refrigeration system including hot gas relief systems.

Differential-pressure pilot valve, type CVPP

Figure 2: CVPP

CVPP is a differential-pressure pilot valve for a max. working pressure (MWP) of 65 bar (943 psig) and with 2 setting ranges covering settings of -0.66 to 28 bar (19.5 in. Hg to 406 psig). The pilot valve is used for maintaining a constant differential pressure between the CVPP valve reference pressure connection and the main valve inlet pressure.

CVPP incorporates a diaphragm so that the reference pressure and the refrigerant in the valve are physically separated. The pilot valve can therefore also be used as a pneumatic control valve either to control a main valve or as a separate pneumatic valve mounted in a CVH housing.

¹ Only CVP-M and CVP-H are approved for MWP of 65 bar.

Pressure-operated pilot valve with reference pressure connection, type CVC

The reference pressure must be connected to the low-pressure side of the system.

Figure 3: CVC

CVC is a constant pressure pilot valve at an external reference point for a max. working pressure (MWP) from 52 bar (754 psig) to 65 bar (943 psig)² and with 2 setting ranges covering settings of -0.66 to 28 bar (19.5 in. Hg to 406 psig). The CVC-pilot is designed to maintain a constant pressure at an external reference point in the system.

CVC pilot valve installed in an ICS servo valve are used for e.g.:

- Outlet pressure regulator to regulate max. suction pressure, e.g. as a compressor crankcase pressure regulator.
- Outlet pressure regulator as a pressure limiter, e.g. for hot gas defrost of hot gas lines.

Electronically operated constant-pressure (constant pressure difference) pilot valve, type CVE

Figure 4: CVE

CVE is, when fitted with the ICAD 1200B stepper motor, a constant pressure pilot valve with electronic change of set-point for a max. working pressure (MWP) of 52 bar (754 psig) and with electronic controlled full range settings of -0.66 to 8 bar gauge (19.5 in. Hg to 116 psig). The CVE interface to the ICAD is hermetic closed and rotation force is transferred from the ICAD by magnetic forces.

The CVE pilot valve is designed to maintain a constant and very accurate inlet pressure of an ICS servo valve, e.g. evaporator pressure regulation.

The CVE/ICAD unit can be either stand-alone or connected to a remote EKC 361/EKE 400 or PLC with appropriate controller function.

² Only CVC-M is approved for MWP of 65 bar.

The stand-alone arrangement allows the on-site ICAD setting - and the remote wiring allows remote setting of the desired set pressure.

Solenoid pilot valve, type EVM (NC) and EVM (NO)

Figure 5: Solenoid pilot valve, type EVM (NC) and type EVM (NO)

EVM is a solenoid pilot valve for use when on/ off operation of the main valve is required. EVM valves are intended for use with Danfoss solenoid valve coils (“Coils for solenoid valves”, data sheet [AI237186440089](#)). Together with CVH, an EVM can also be used as an independent solenoid valve.

Media

Refrigerants

Applicable to HCFC, non flammable HFC, R717 (Ammonia) and R744 (CO₂). The use of pilot valves with flammable hydrocarbons is not recommended

New refrigerants

Danfoss products are continually evaluated for use with new refrigerants depending on market requirements.

When a refrigerant is approved for use by Danfoss, it is added to the relevant portfolio, and the R number of the refrigerant (e.g. R513A) will be added to the technical data of the code number. Therefore, products for specific refrigerants are best checked at store.danfoss.com/en/, or by contacting your local Danfoss representative.

Product specification

Design

Each pilot valve is designed to give the optimum control accuracy within the specific function range of the valve. Several pilot valves can be mounted in series and/or in parallel on the main valve (ICS, ICF or the discontinued PM) to suit numerous applications.

Mounted in a CVH housing, the pilot valves can be used in external lines, either as independently operating valves or as external control valves for the main valve. Mounted in a CVH housing, the pilot valves can be used in external lines, either as independently operating valves or as external control valves for the main valve.

Pressure and temperature data

Temperature range: -60 °C/+120 °C (-76 °F/+248 °F)

Pressure range: The pilot valves are designed for a max. working pressure of 52 bar (754 psig). Pressure setting ranges are given separately for the specific pilot valve. For further information please see installation guides for ICS or ICF valves.

Table 1: Technical data for CVP

Valve type	Max. working pressure		k _v / C _v value		Temperature range		Pressure range		Code no.
	[bar]	[psig]	[m ³ /h]	[US gal/min]	[°C]	[°F]	[bar]	[psig]

These areas are dedicated regulation band for the pilot valve. It is recommended not to exceed the limits in above table value.

Table 7: Technical data for EVM (NC) and EVM (NO)

Valve type	Max. working pressure		k_v / C_v value		Temperature range		MOPD/MCPD		Code no.
	[bar]	[psig]	[m ³ /h]	[US gal/min]	[°C]	[°F]	[bar]	[psig]	
EVM NC	65	940	0.34	0.39	-60/+120	-76/+248	21	305	027B1120
EVM NO	65	940	0.12	0.14	-60/+120	-76/+248	19	276	027B1130
EVM NO	65	940	0.12	0.14	-60/+120	-76/+248	40	580	027B1132

NOTE:

All k_v / C_v values are measured with the pilot valve mounted in a CVH housing for external pilot lines.

For CVP, CVPP, CVC and CVE: The values can vary slightly, depending on the setting value.

(For EVM): MOPD: Maximum opening differential pressure values stated are valid for a 10 W AC coil.

For other coils:

20 W AC coil MOPD is 40 bar (580 psig)

20 W DC coil MOPD is 14 bar (203 psig)

MCPD: Maximum closing differential pressure stated are valid for a 10/12 W AC coil/ 20 W DC coil respectively.

Online support

Danfoss offers a wide range of support along with our products, including digital product information, software, mobile apps, and expert guidance. See the possibilities below.

The Danfoss Product Store

The Danfoss Product Store is your one-stop shop for everything product related—no matter where you are in the world or what area of the cooling industry you work in. Get quick access to essential information like product specs, code numbers, technical documentation, certifications, accessories, and more.

Start browsing at store.danfoss.com.

Find technical documentation

Find the technical documentation you need to get your project up and running. Get direct access to our official collection of data sheets, certificates and declarations, manuals and guides, 3D models and drawings, case stories, brochures, and much more.

Start searching now at www.danfoss.com/en/service-and-support/documentation.

Danfoss Learning

Danfoss Learning is a free online learning platform. It features courses and materials specifically designed to help engineers, installers, service technicians, and wholesalers better understand the products, applications, industry topics, and trends that will help you do your job better.

Create your Danfoss Learning account for free at www.danfoss.com/en/service-and-support/learning.

Get local information and support

Local Danfoss websites are the main sources for help and information about our company and products. Find product availability, get the latest regional news, or connect with a nearby expert—all in your own language.

Find your local Danfoss website here: www.danfoss.com/en/choose-region.

Spare Parts

Get access to the Danfoss spare parts and service kit catalog right from your smartphone. The app contains a wide range of components for air conditioning and refrigeration applications, such as valves, strainers, pressure switches, and sensors.

Download the Spare Parts app for free at www.danfoss.com/en/service-and-support/downloads.

Coolselector®2 - find the best components for you HVAC/R system

Coolselector®2 makes it easy for engineers, consultants, and designers to find and order the best components for refrigeration and air conditioning systems. Run calculations based on your operating conditions and then choose the best setup for your system design.

Download Coolselector®2 for free at coolselector.danfoss.com.
