Danfoss

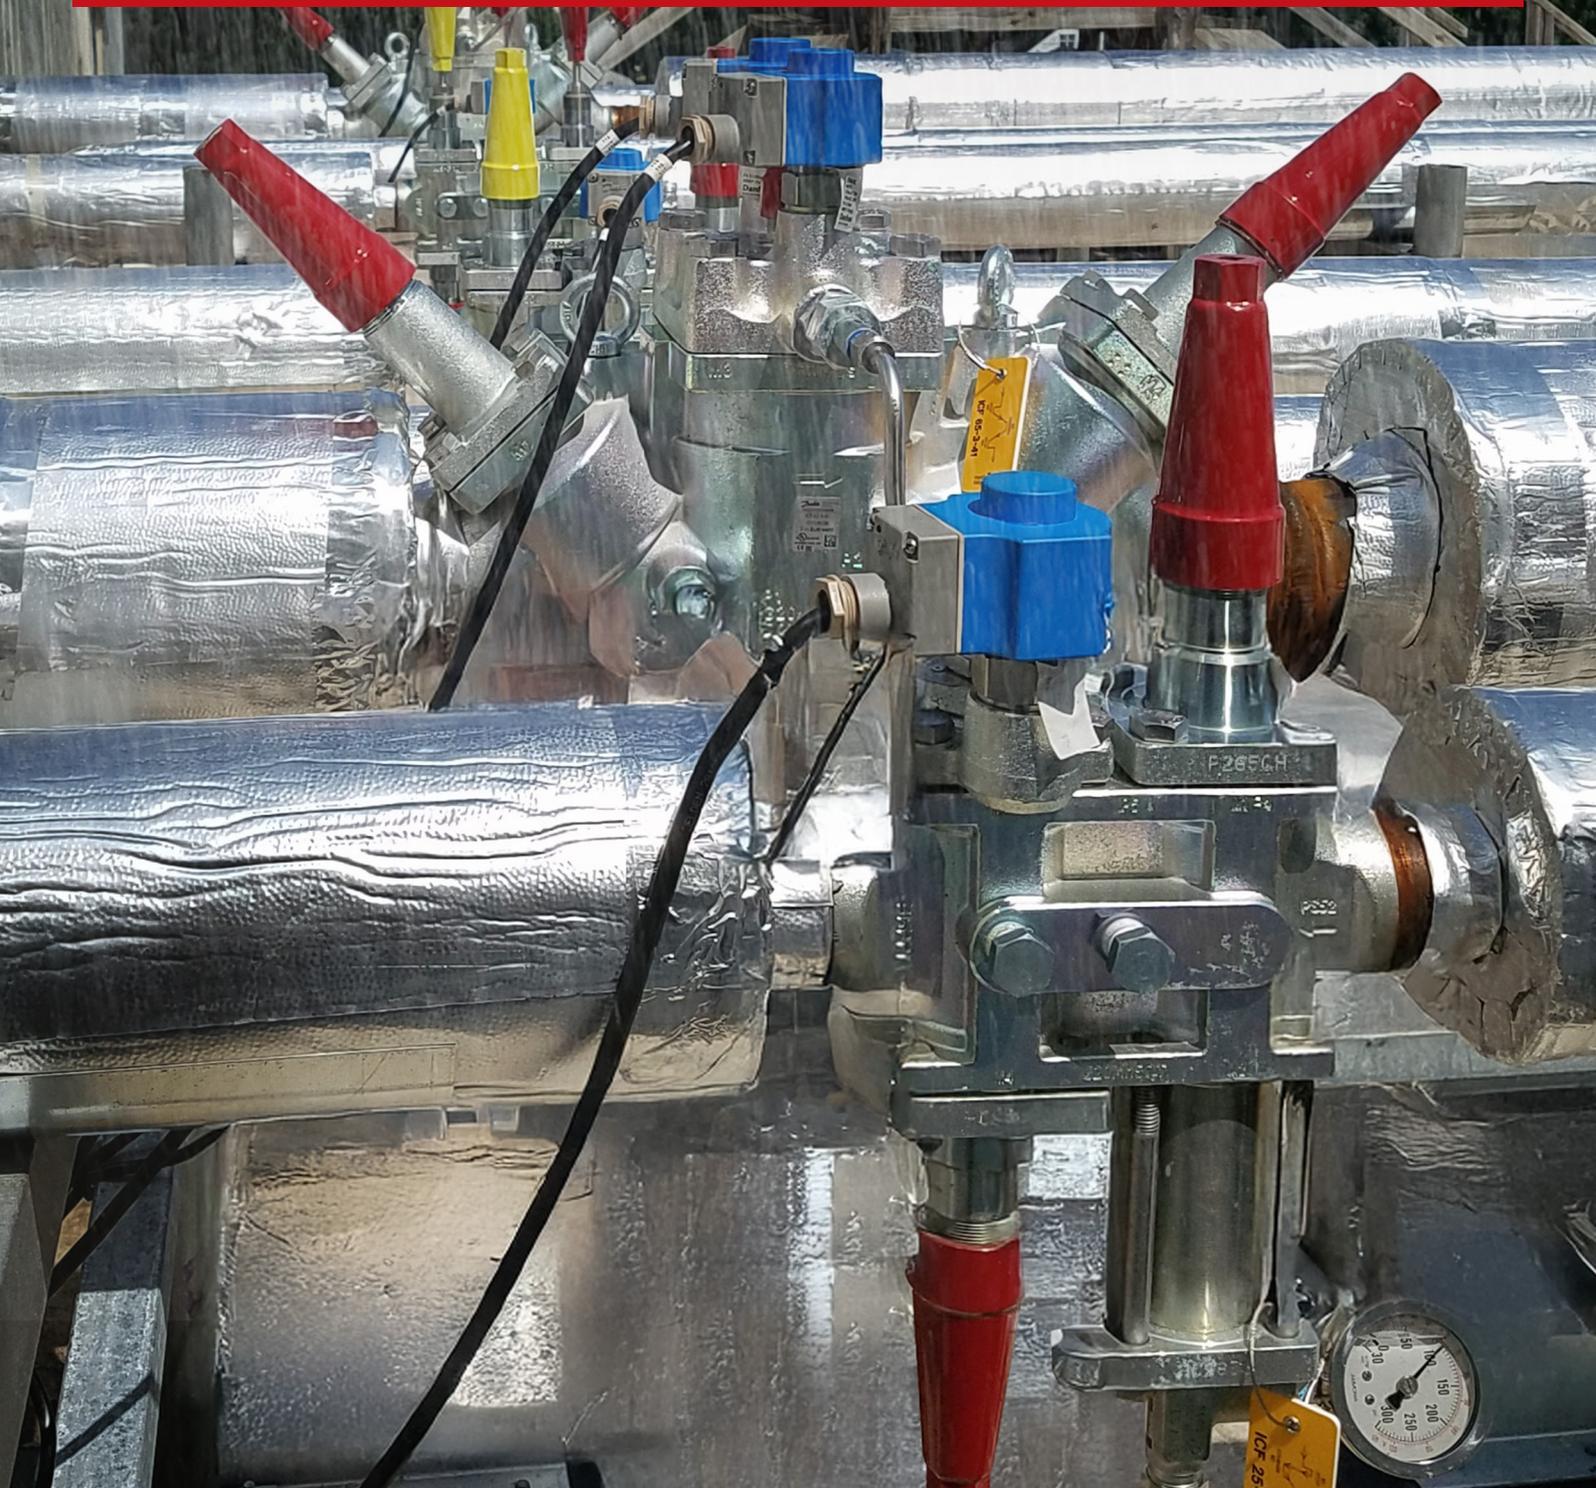

Premium weather protection for ultimate durability

Upgrade your outdoor refrigeration installations. With Danfoss, you get a wide range of innovative, intuitive control valves with superior protection. Pick between our TLP-treated components with an extra layer of protection and our stainless-steel options with minimum corrosion and maintenance costs.

**LONG LIVE LOW
MAINTENANCE**

Premium weather protection
for ultimate durability

Weather-proof, future-proof

- Robust solutions with little maintenance and replacements
- All industrial refrigeration valves and valve stations are TLP coated or stainless steel
- Stainless steel valves = lifetime products
- Peace of mind with Danfoss quality performance

Defy the elements

Choose stainless steel for...

- Excellent longevity with minimum corrosion
- Improved facility visibility
- Minimized maintenance cost
- Enhanced mechanical integrity and improved safety

Choose Thick Layer Passivation (TLP) for...

- Trust Danfoss' 20 years' experience offering TLP coated Industrial Refrigeration valves
- Excellent weather protection
- Sufficiently scratch resistance
- Available in all sizes
- Easy welding procedure to stainless steel pipes

Product lines

ICF Flexline™ – unmatched freedom for low charge refrigerant systems, including NeoCharge technology, with a modular valve station

This multi-ported Danfoss control solution offers you significant savings by substituting a string of valves with just one valve station. 80% of the products for outdoor refrigeration installations are stainless steel, the rest are TLP coated for reduced maintenance and replacements.

ICV Flexline™ – cut energy costs and downtime with a modular concept

Danfoss ICV Flexline™ gives you one platform for multiple control solutions. The modular concept offers outstanding flexibility with a large range of products based on one common valve body. With Danfoss ICV Flexline™, you get TLP-coated solutions that enhances reliability, safety, and sustainability, now and in the long run.

SVL Flexline™ – reduce complexity and costs with a flexible product platform

With SVL Flexline™, you get flexible products approved for low-GWP refrigerants. Based on just two different valve types, the platform offers five different functions. This simplicity translates into easy handling and less time wasting. We offer both stainless-steel and TLP-coated products – all with low life-cycle costs and reduced emissions from leaks.
