Danfoss

Data Sheet

Thermostatic expansion valve Type **TR6**

Designed and developed with special features for different applications

The TR6 series is a hermetic design which is developed with features especially for use in applications such as:

- Residential air conditioning systems
- Split systems
- Roof top units
- Heat pumps
- Chillers
- Light commercial air conditioning systems

The TR6 design incorporates a forged brass body with the entire power element, including the capillary tube and bulb, fabricated from stainless steel. All valves are designed with balanced port which reduces the influence from varying condensing pressures. The valves can be delivered with special connections and fittings both at the inlet, outlet, and the equalizer connection.

Features

- Compact size hermetic design, straightway configuration with external equalization
- Refrigerants & rated capacities ranging up to
- ° R22 / R407C: 23.9 Kw / 6.8 TR
- R410A: 24.6 Kw / 7 TR
- R454B: 26.7 Kw / 7.6 TR
- ° R32: 36.2 Kw / 10.3 TR
- Laser-welded power element
- Longer diaphragm life
- High corrosion resistant
- Stainless steel capillary tube
- ° Tolerates more bending for easier installation and longer life
- High strength and vibration resistance
- Stainless steel bulb
- Self aligning
- Balance port design
- A complete program with and without internal check valve
- Internal check valve design with low pressure drop in reverse flow
- · Adjustable or non-adjustable superheat, for customer specific factory setting
- Bleed function available
- Solder, chatleff and aeroquip connections
- With external equalization
- UL listed, file SA7200
- Anti-hunt bulb charge

Application

Traditional air conditioning system, cooling only

Figure 1: Traditional air conditioning system, cooling only

Illustrates the diagram of a traditional air conditioning system where the TR6 is controlling liquid injection in one direction only.

Traditional air conditioning / heat pump system

Figure 2: Traditional air conditioning / heat pump system

Illustrates a split air conditioning / heat pump system with two thermostatic expansion valves, one for cooling mode and one for heating mode. The thermostatic expansion valves each has a built-in check valve, which has the function of preventing flow in one direction and allowing the flow in the opposite direction. It means that one thermostatic expansion valve is controlling liquid injection into the indoor coil while the other thermostatic expansion valve is bypassing the metering device with the open check valve.

Simplified air conditioning / heat pump system (bi-flow)

Figure 3: Simplified air conditioning / heat pump system (bi-flow)

Illustrates a packaged air conditioning / heat pump system with a short distance between the indoor and outdoor heat-exchangers. The two TR6 valves from fig 6 can be replace by one TR6 valve without internal check valve, making use of the bi-flow feature of this thermostatic expansion valve. The single valve is controlling the liquid injection in both directions. The normal flow direction marked with an arrow on the valve body should be used for the primary function, i.e. cooling or heating.

Product specification

Technical data

Max. operating temperature

- Thermostatic bulb & top part / element:
- R22 / R407C: max. 100 °C / 212 °F
- R410A: max. 120 °C / 248 °F
- R454B: max. 115 °C / 239 °F
- R32: max. 120 °C / 320 °F
- Valve body:160 °C / 320 °F

Max. working pressure PS / MWP

49 bar / 711 psig

Valve program

Standard versions

Refrigerants: R22 / R407C, R410A, R454B and R32

Operating range:

-10 to 15 °C / 15 to 60 °F

Setting:

- Fixed setting:
 - Static superheat in accordance with customers' specifications

•

Adjustable setting: **R22 / R407C** Factory static superheat of 4 K / 7.2 °F **R410A, R454B and R32** Factory static superheat of 3 K / 5.4 °F

Packing

Single or Multipack Industrial Pack for OEM specific valves only

Versions:

All valves are in straightway versions with or without internal check valve

Standard connections:

Inlet solder 3/8 in. ODF x Outlet solder 3/8 in. ODF Equalizer capillary tube 1/4 in. flare; 24.3 in. length

Capillary tube length: 800 mm / 31.5 in.

Options on request

Capillary tube lengths(approx.):

450 mm / 17.7 in. 975 mm / 38.4 in.

Options for Connections:

Inlet/Outlet:

Inlet: Solder ODM $\frac{3}{8}$ in., solder ODF $\frac{3}{8}$ in., solder ODF $\frac{1}{2}$ in., Chatleff male $\frac{5}{8}$ in. and aeroquip male $\frac{5}{8}$ in. Outlet: Solder ODF $\frac{3}{8}$ in., solder ODF $\frac{1}{2}$ in., solder ODF $\frac{5}{8}$ in., chatleff female $\frac{3}{4}$ in., short and long tail, aeroquip female $\frac{5}{8}$ in., short and long tail.

Equalizer:

Copper capillary tube size (approx.): Ø1/8 in.

Available configurations:

Solder ODM ¹/₈ in., lengths 9.5 in., 16.9 in., 24.3 in., 31.7 in. Solder ODF ¹/₄ in., lengths 31.7 in. and 39.1 in. Flare nut ¹/₄ in., lengths 9.5 in., 16.9 in., 24.3 in., 31.7 in.

Identification

Figure 4: Main valve data example:

4	Valve type
3	Code number
2	Evaporating temperature range in °C
C	Refrigerant
Ξ	Rated capacity Qnom in Tons of refrigeration
=	Evaporating temperature range in °F
G	Max. working pressure in bar and psig
4	Date making (BC=Mexico, week 49, year 2017, weekday D=Thursday)

Essential valve data is given on the power element.

Check valve capacity

Figure 5: Internal check valve for orifice bypass in reverse flow (flow rate as a function of pressure differential)

C Dp (psi)C Mass flow lb/h

T_c= 32 °C / 90 °F T_l= 24 °C / 75 °F

Valve selection based on capacity calculation

As for extended capacity calculations and valve selection based on capacities and refrigerants, please refer to Coolselector[®]2. Rated and extended capacities are calculated with the Coolselector[®]2 calculation engine to ARI standards with the ASEREP equations based on laboratory measurements of selected valves.

Download Coolselector[®]2 for free at coolselector.danfoss.com.

Design and function

Table 1: Design and function

- 2 Thermostatic element
- 3 Push pin seal
- 4 Balanced port
- Check valve 5

- Setting spindle for adjustment of static superheat (SS)
- 7 Equalizer
- Inlet connection 8
- 9 Outlet connection

Figure 6: Static/opening superheat graph

SS Static superheat

OS Opening superheat at nominal/rated capacity

OSH SS + OS = Operating superheat

The central push pin is sealed with a robust seal (pos. 3) that ensures maximum tightness and minimum friction through the lifetime of the valve.

The balanced port (pos. 4) ensures minimal superheat changes when condensing pressure varies. This feature makes the valve ideal for bi-flow operation.

Static superheat (SS) can be adjusted with the setting spindle (pos. 6).

Example

Static superheat SS= 3K / 6.3 °F (factory setting) or according to customer specification

Opening superheat at nominal/ rated capacity

```
• OS = 4 \text{ K} / 7.2 \,^{\circ}\text{F} for R22
```

• OS= 3.5K / 6.3 °F for R410A, R454B and R32

Opening superheat is defined as the required superheat to open the valve to nominal capacity

Dimensions and weights

Fixed setting

Table 2: Fixed setting

Weight 0.305 kg, 0.672 lbs

Adjustable setting

Weight 0.361 kg; 0.795 lbs

⁽²⁾ Small OEMs are industrial pack with bulb strap, no kit

Table 6: Capacities for R22 / R407C, R410A, R454B and R32

Valve Type	Orifice no.	Rated Capacity											
		R410A ⁽³⁾		R407C		R22		R45	R32				
		[KW]	[TR]	[KW]	[TR]	[KW]	[TR]	[KW]	[TR]	[KW]	[TR]		
TR6	2	9.5	2.7	-	-	-	-	10.5	3	14.4	4.1		
TR6	3	11.2	3.2	9.8	2.8	10.9	3.1	12.6	3.6	17.2	4.9		
TR6	4	15.8	4.5	13.7	3.9	15.4	4.4	17.6	5	24.2	6.9		
TR6	5	19	5.4	16.5	4.7	18.3	5.2	21.1	6	28.4	8.1		
TR6	6	20.4	5.8	17.2	4.9	19.7	5.6	22.5	6.4	30.5	8.7		
TR6	7	24.6	7	21.1	6	23.9	6.8	26.7	7.6	36.2	10.3		

⁽³⁾ The rated capacity is based on:

+ Evaporating temperature te : 4.4 $^{\circ}\text{C}$ / 40 $^{\circ}\text{F}$

Condensing temperature tc : 38 °C / 100 °F

Refrigerant temperature ahead of valve tl : 37 °C / 98 °F

Temperature range = -10 to 15 °C / 15 to 60 °F TR6 with fixed superheat setting are available upon request. Single pack = 1 valve kit in a box Industrial pack = 18 pieces in one box (adjustable) or 24 pieces in one box (fixed)

Sizing

Figure 8: Sizing

RD Distributor

Compressor

TR6

Example:

Refrigerant=R410A Evaporating temperature=(te=45 °F;pe=131 psig) Condensing temperature =(tc=110 °F;pc=368 psi Liquid line tl= 100 °F pressure drop in liquid line, drier and distributor system Dp2+ Dp1=35 psi Pressure drop in valve Dp = 368 - 131 - 35 = 202 psi Subcooling Δ tsub = tc - tl=10 °F Evaporator capacity = 4.0 TR Correction factor from table= 1.02

The corrected evaporator capacity then becomes $4.0 \times 1.02 = 4.08$ TR As the selected valve must be equal to or slightly larger than the corrected evaporator capacity of 4.08 TR, the TR6 with orifice 4 would be a suitable choice. Reference table below for rated capacities.

Table 7: Capacity in TR for MAH 14-59 °F at 7.2 °F static super heat SS

		Pressure drop across valve Δpsi						Pressure drop across valve Δpsi

O NOTE:

Insufficient subcooling can produce flash gas.

Correction for subcooling Δt_{sub}

The evaporator capacity used must be corrected if subcooling deviates from 4 K / 7.2 °F.

The corrected capacity can be obtained by multiplying the evaporator capacity by the correction factor given below.

Thermostatic expansion valve, type TR6

Table 8: Correction factor for subcooling Δ tsub

Correction fac-	4K	10K	15K	20K	25K	30K	35K	40K
tor	7.2 °F	18 °F	27 °F	36 °F	45 °F	55 °F	63 °F	72 °F

Online support

Danfoss offers a wide range of support along with our products, including digital product information, software, mobile apps, and expert guidance. See the possibilities below.

The Danfoss Product Store

The Danfoss Product Store is your one-stop shop for everything product related—no matter where you are in the world or what area of the cooling industry you work in. Get quick access to essential information like product specs, code numbers, technical documentation, certifications, accessories, and more.

Start browsing at store.danfoss.com.

Find technical documentation

Find the technical documentation you need to get your project up and running. Get direct access to our official collection of data sheets, certificates and declarations, manuals and guides, 3D models and drawings, case stories, brochures, and much more.

Start searching now at www.danfoss.com/en/service-and-support/documentation.

Danfoss Learning

Danfoss Learning is a free online learning platform. It features courses and materials specifically designed to help engineers, installers, service technicians, and wholesalers better understand the products, applications, industry topics, and trends that will help you do your job better.

Create your Danfoss Learning account for free at www.danfoss.com/en/service-and-support/learning.

Get local information and support

Local Danfoss websites are the main sources for help and information about our company and products. Find product availability, get the latest regional news, or connect with a nearby expert—all in your own language.

Find your local Danfoss website here: www.danfoss.com/en/choose-region.

Coolselector[®]2 - find the best components for you HVAC/R system

Coolselector[®]2 makes it easy for engineers, consultants, and designers to find and order the best components for refrigeration and air conditioning systems. Run calculations based on your operating conditions and then choose the best setup for your system design.

Download Coolselector[®]2 for free at coolselector.danfoss.com.
