

Operating Guide

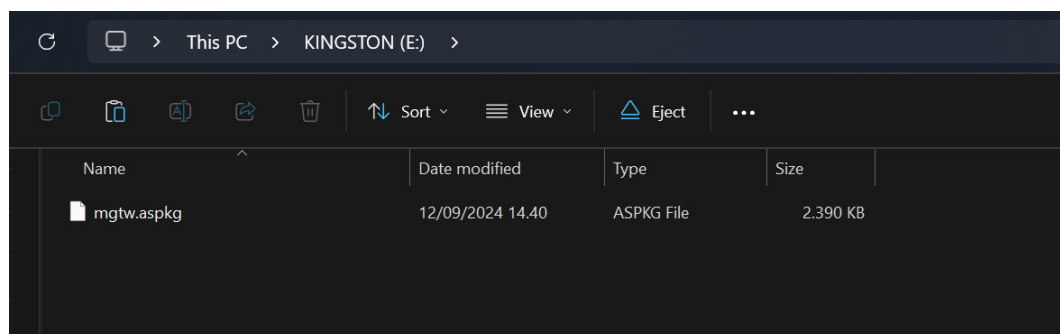

How to upgrade X-Gate via USB

GPS-XG-B4

1. Prepare the USB flash drive type-C. It is recommended to have an empty flash drive formatted as FAT32.

2. Unzip the zip file directly onto the USB flash drive. From version 5.22 and up, the update file is named 'mgw.aspkg'. This file must be placed on the USB root, as follows:

3. Insert the USB drive into the X-Gate.
4. Remove the power supply and connect it back.
5. Wait several minutes (approximately 5 mins) for the update process. The X-Gate will change its color several times (violet, red, green).
6. When the update process is done, the X-Gate will blink violet. For safety reasons, please wait 2-3 mins before disconnecting the USB drive. Afterwards, the X-Gate should change color to blinking green.
7. You can always redo the flashing process if something goes unexpectedly.

Note:

- * During this process, the user settings will be preserved
- ** The .aspkg files are supported from version 5.20 and up.
