

DrivePro® Site Assessment

Get a complete on-site survey of your variable frequency drives

Optimize your maintenance strategy with a complete on-site survey and risk analysis of all your variable frequency drives and power converters collected in one detailed report.

Together with a Danfoss expert, you can build a tailored plan for future maintenance, retrofits, and upgrades.

100%
visibility and operational overview of your VFDs on-site.

Mitigate risk of failure

Minimize unexpected costs and downtime by ordering a DrivePro® Site Assessment.

DrivePro® Site Assessment is a service for asset management that includes a complete on-site survey and risk analysis of your whole installed base.

Many factors influence the performance of your equipment: general wear and tear of the equipment, age, and risk exposure. Some factors influence asset conditions directly, impacting the up time of your equipment and increasing

maintenance costs. For example, ambient conditions significantly impact life expectancy of a product. Regular assessment mitigates the risk of failure by updating knowledge of ambient conditions, which can change dramatically after installation over the lifetime of the product and/or application.

Knowledge is power

Our Danfoss experts look at every drive and power converter installed on your site to record the asset condition, the criticality, and the lifecycle status. Based on these parameters, we calculate a risk result for each of them and make recommendations for the product's lifecycle journey accordingly.

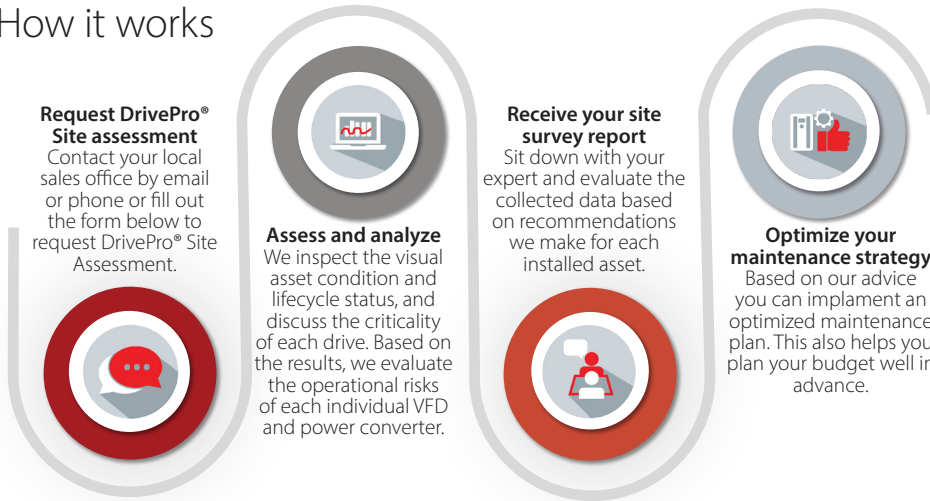

Asset Management

A site survey is conducted using the DrivePro® 360Live solution, with the results summarized in a customized asset analysis report. Based on data-driven recommendations, Danfoss experts work with you to define a tailored plan for future maintenance or retrofitting to the latest technology generation.

The solution enables smart and easy asset management by mapping asset locations, assessing risks and criticality, and supporting preventive maintenance planning to minimize unexpected downtime and maximize uptime. It also provides clear dashboards and expert reports, helping you prioritize critical assets, optimize maintenance within budget, and ensure the availability of essential spare parts and emergency stock for efficient servicing.

Feature	Benefit
Complete overview of your installed base	<ul style="list-style-type: none"> – See the latest lifecycle status of each asset installed – Asset criticality evaluation – Performance overview
Detailed site analysis report	<ul style="list-style-type: none"> – Asset risk analysis – Risk mitigation plan
Interactive expert recommendation	<ul style="list-style-type: none"> – Predictable and cost-saving maintenance plan – Avoid complexity and take the guesswork out of your maintenance plan

How it works

How to order

Contact your local sales office to request DrivePro® Site Assessment. Orders can be placed by email or by telephone. You can find your local Danfoss Drives contact here:
