Servo-operated 2/2-way solenoid valves with isolating diaphragm

Type EV222B

EV222B is an indirect servo-operated solenoid valve programme for use in connection with contaminated or aggressive media. Valve body in stainless steel, isolating diaphragm protecting the solenoid system against impurities, built in pilot filter, replaceable equalizing orifice, enclosures up to IP67 ensure a reliable and satisfaction function.

Features

- Differential pressure: Up to 10 bar
- Viscosity: Up to 50 cSt
- Ambient temperature: Up to 60 °C
- Coil enclosure: Up to IP67
- Isolating diaphragm
- Water hammer damped
- Built in filter for protection of pilot system
- Stainless steel valve body
- DN 15 – DN 50
- Thread connection: From G ½ – G 2
- NC versions only

**Stainless steel valve body,

Isolating diaphragm kit

Seal material	Code number
EPDM ¹⁾	042U1009
FKM ²⁾	042U1010

¹⁾ EPDM is recommended for water.
Media temperature: -20 – 50 °C.
²⁾ Media temperature: 0 – 50 °C.

The isolating diaphragm design ensures that no fluid enters the armature area, which gives the following advantages:
The valve is resistant to aggressive fluids, impurities in the fluid and to calcareous and scale deposits.

The kit contains:
Assembled isolating unit
O-ring
4 screws
Locking button
Nut for the coil

Diaphragm spare parts kit, NC
(for complete spare parts kit, the isolating diaphragm kit must be ordered separately)

Type	Seal material	Code number
EV222B 15	FKM	032U6326
EV222B 20	FKM	032U6327
EV222B 25	FKM	032U6328
EV222B 32	FKM	032U6329
EV222B 40	FKM	032U6330
EV222B 50	FKM	032U6331

The kit contains:
Locking button and nut for the coil
Armature with valve plate and spring (not to be used for EV222B)
O-ring for the actuator
2 O-rings for the equalizing orifice
Spring and diaphragm
2 O-rings for the pilot system

Function, NC

1. Armature spring
2. Armature
3. Isolating diaphragm
4. Pilot orifice
5. Diaphragm
6. Main orifice
7. Equalizing orifice
8. Coil
9. Spring

**2/2-way servo-operated**

When voltage is applied to the coil (8), the armature (2) with the isolating diaphragm (3) is lifted clear of the pilot orifice (4) and the diaphragm (5) is lifted by the fluid pressure - the main orifice (6) opens.

When voltage is disconnected the isolating diaphragm (3) is pressed down against the pilot orifice (4) by the armature spring (1) and pressure is built up above the diaphragm (5) via the equalizing orifice (7). The main orifice is closed by the fluid pressure and the spring (9). The isolating diaphragm keeps the medium away from the actuator.

The space above the isolating diaphragm is filled up with silicone oil.
