Living is easy

With the new Danfoss TPOne programmable thermostat, it's easy to maintain a comfortable indoor environment while saving money.

Simple to set and adjust, TPOne automatically regulates the temperature of your home to a rhythm that you define. With just the touch of a button, you can enjoy a perfect indoor climate, morning, day and night.

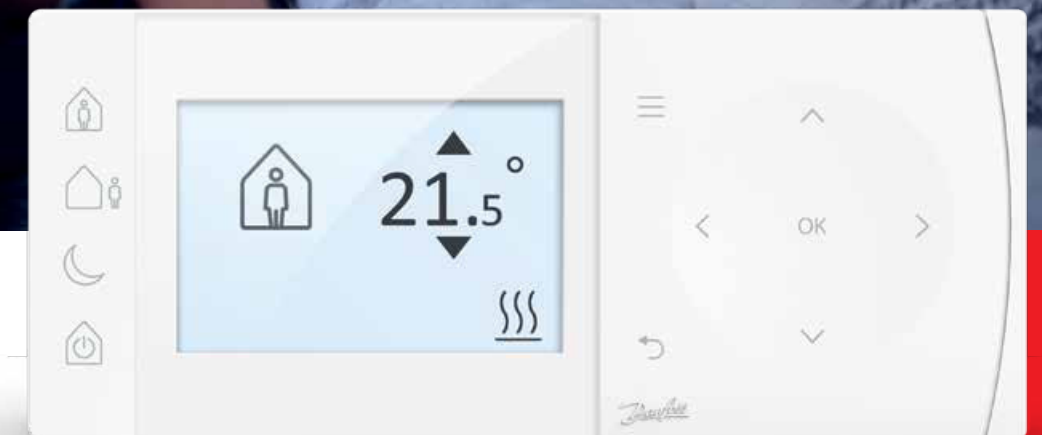

TPOne is ideal for virtually any domestic heating application with a boiler system, from single to multiple family homes.

Lowering temperatures while you're away... and while you sleep.

Cosy mornings
21.5°C

Comfortable nights
17.0°C

Freedom to enjoy life's changes

When your daily routines change – or even if you fancy a little more warmth on a chilly afternoon – the versatile TPOne makes adjustments a breeze.

Four convenient comfort modes mean you can respond to all of life's little changes at the touch of a button.

If you get up earlier than usual, simply press **Home** and TPOne will quickly raise the temperature to your predefined home comfort level.

And if you leave home early, you can save energy and reduce costs by simply pressing **Away**.

If you fancy an early night, just press **Asleep** and TPOne will do the rest: lowering the temperature to your preferred night-time setting.

When airing your home or during the summer months, you can save energy by simply pressing **Standby** to turn off your heating completely.

Click & Save

Simple and effective

Independent tests have shown that lowering your home comfort temperature by just one degree can reduce energy consumption by as much as 10%.

With TPOne's innovative 'Click & Save' function, you can quickly lower all your pre-defined comfort settings by one degree with just a few clicks - helping to protect the environment and saving money at the same time.
