Grow your business and discover the value of working with one partner

One point of access to expertise, tools and solutions – for one complete project delivery.

heating.danfoss.com
The commercial environment for successfully realizing heating projects has never been more competitive than it is today.

**Energy efficiency**

Increasing political focus on energy efficiency, use of renewable resources, and reducing emission levels has led to even tighter regulations.

**Higher demands from building owners**

At the same time, owners and end-users are demanding increased comfort while expecting lower energy bills.

**Return on investment**

Added to that are the commercial pressures of achieving a rapid return on investment, which means that renovations and new buildings need to be operational faster than ever before.

Against this background, we can provide you with a decisive competitive and commercial advantage. From the earliest tendering stages to technical specification, commissioning, and after-sales support, we offer you an unrivalled level of expertise under one roof.

Danfoss Heating covers far more than you may think. With the industry’s leading range of products, application expertise, technical knowledge and project experience, there is no limit to what we can achieve together.

**Working together to beat the toughest challenges**

The current mega-trend in reducing energy use and creating more sustainable national infrastructures is opening up enormous commercial opportunities. From single domestic new builds to major renovations of former industrial sites, every project offers potential for innovative heating solutions.

The key to exploiting these opportunities is having a partner at your side with the expertise, integrated solutions and sheer scale to enable you to react quickly.

Millions of apartments worldwide are renovated every year. Improved heating and cooling systems, insulation on roofs and facades, new windows and doors can reduce the energy requirements of an apartment building by up to 83%. Achieving energy savings of this scale – including potentially integrating renewable energy sources – requires innovative integrated energy concepts for both renovations and new buildings.

**Huge business potential in choosing integrated solutions**

Meeting regulations and tough customer requirements takes serious consideration...

...and wise choices
You tell us what you need. Our application expertise and product portfolio make it a reality

Heating and cooling systems in a building are like a tree. The system applications are connected from the deepest root to the tip of the smallest leaf.

www.heating.danfoss.com/products

You can find all the information you need about our comprehensive range of components and complete systems on our website. We have individual products to suit the precise requirements of every scale of project, from a small domestic installation to the largest commercial construction.

Discover the benefits of having Danfoss as your single provider.

Your application or building type is key to our recommendations

Drawing on decades of experience and the industry’s most comprehensive product portfolio, we design individually integrated solutions for every single project. We can also support you during the design, specification, and documentation stages, as well as providing ongoing technical support after commissioning: All from a single partner.
Danfoss aims to bring the full benefits of efficient heating systems to everyone involved in apartment block living. This means achieving better return on investment, lower overall costs, greater comfort and safety, and reduced environmental impact. Multiple application design options are available for all types of projects, from renovations to new builds.

Residential 1-2 family house applications

Whether client, homeowner, or building user, everyone benefits from increased comfort with reduced energy consumption. Our complete portfolio of residential heating component and systems allows you to integrate the right mix of energy-efficient products within the heating system. Designed to work seamlessly together, they create both comfort and economic value.

Residential multi-family building applications

Danfoss aims to bring the full benefits of efficient heating systems to everyone involved in apartment block living. This means achieving better return on investment, lower overall costs, greater comfort and safety, and reduced environmental impact. Multiple application design options are available for all types of projects, from renovations to new builds.

System highlights

Comfort options:
- Heating control
- Cooling and air conditioning control
- System monitoring and weather compensation
- Underfloor heating

Distribution options:
- Hydronic balancing, flow and temperature control
- Outdoor heating, frost protection, and snow melting

Heat source options:
- District heating
- Renewable heating and cooling
- Components for condensing boilers

Substation
Enables efficient use of heat and domestic hot water in houses supplied by district heating.

Heat pump (market specific)
Use ground or air source heat pumps to provide heating, hot water and cooling for your house.

Outdoor solutions
The ice and snow melting systems operates fully automatically. It automatically registers the need for ice and snow melting and it switches the heat on and off as required.

System highlights

Comfort options:
- Heating control
- Cooling and air conditioning control
- Domestic hot water
- Underfloor heating

Distribution options:
- Hydronic balancing, flow and temperature control
- System monitoring and weather compensation
- Outdoor heating, frost protection, and snow melting
- Energy metering

Heat source options:
- District heating
- Renewable heating and cooling
- Components for condensing boilers

Substation
Enables efficient use of heat and domestic hot water in buildings supplied by district heating.

Heat pump (market specific)
Use energy in the air around a property to provide heating and hot water for your building.

RA self-acting radiator thermostats
With TELL certificate for high energy efficiency and comfort.

ECtemp™ Touch
Intelligent floor heating control, designed to provide optimum comfort, exactly when and where you need it.

EvoFlat™ stations
For efficient heat distribution and hygienic safe production of domestic hot-water in new buildings.

Floor heating control (BasicPlus™) and manifolds
For new builds and renovations, in wired and wireless versions.
Commercial building applications

From offices, hotels, and public buildings to supermarkets and industrial facilities, commercial buildings serve a vast array of purposes. What they all share in common is the need for their HVAC systems to be specified and designed to be as efficient, versatile and economical as possible. Here are just some of our many specialist products for achieving optimum comfort, efficiency and economy.

**System highlights**

**Comfort options:**
- Comfort heating, cooling, and air conditioning control
- System monitoring and control for BMS
- Domestic hot water

**Distribution options:**
- Hydronic balancing, flow and temperature control
- Outdoor heating, frost protection, and snow melting

**Heat source options:**
- District heating and cooling supply
- Renewable heating and cooling
- Components for condensing boilers

**NovoCon® and AB-QM**
Digital actuator in combination with the pressure-independent AB-QM control valves. Designed to offer best-in-class hydronic performance combined with Building Management System (BMS) connectivity.

**ChangeOver**
For easy diversion of seasonal function between heating and cooling in four-pipe changeover systems.

**District heating and district energy network applications**

District heating and cooling is the ideal option for economically viable, climate-friendly heating and cooling of buildings in urban areas and city districts. Danfoss is the industry leader in this technology and offers you access to the expertise, application know-how, and products you need to successfully realize any scale of project.

**System highlights**

**Comfort options:**
- Network monitoring and system temperature control
- Domestic hot water production
- Comfort heating

**Distribution options:**
- Hydronic balancing, flow and temperature control in networks
- Energy metering

**Heat source options:**
- District heating and cooling supply

**Electronic ECL Comfort controllers**
For temperature and weather compensation, ensuring comfort and convenience for heating, cooling and domestic hot water systems.

**ECL Portal**
The effective turnkey SCADA tool for service personnel to streamline service, commissioning, maintenance and control tasks of the heating system.

**Self-acting pressure, flow and temperature controllers**
Secure, safe and reliable operation of heating systems.

**Substation and DHW systems**
Enables efficient use of heat and domestic hot water in buildings supplied by district heating networks in cities of any size.

**Ultrasonic SONOMETER™ energy meters**
Guarantee highly accurate and reliable measurement of energy consumption and performance of any heating, district heating or cooling system.

**Substations and plate heat exchangers**
For efficient transfer of heat or cooling water to buildings connected to district energy networks.
Dedicated support center resources
One-point of access to:

Expert knowledge and support to devise the optimum solution to your challenges.

Unique solution based on experience: innovative systems and components.

• Comprehensive commercial and technical consultancy at all levels:
  • Sales engineers, product and application experts
  • Design support centers
  • Application expertise based on recommended application designs
  • Proof-of-concept: application designs are supported by references and case studies from various markets, enabling you to evaluate total cost of ownership (OPEX, CAPEX) based on actual projects

Industry novelty examples:
• Thermostatic radiator valves
• Smart heating: Danfoss Link™ App
• Dynamic Valve™
• NovoCon® and AB-QM
• MicroPlate™ heat exchangers

Efficient services to support the successful completion of your project.

Fast and accurate documentation when preparing your projects.

• Easy ordering via eCommerce platform (market-specific)
• Just-in-time deliveries according to project phases
• Track-and-trace for your shipments
• Complete product documentation from a single supplier
• Efficient quality testing and customer claim handling processes
• Service support related to installation, commissioning, warranty, and repair (market-specific)

Industry novelty examples:
• Thermostatic radiator valves
• Smart heating: Danfoss Link™ App
• Dynamic Valve™
• NovoCon® and AB-QM
• MicroPlate™ heat exchangers

All from one partner – Danfoss Heating

Software, dimensioning and selection tools
2D/3D drawings for project documentation
Application design, product specification examples
Training material, FAQ, and “how-to” guides

Technical documentation of multiple types
Complete product information and data for ordering
Catalogs and price lists
Tender text

Discover the benefits
at www.heating.danfoss.com

Our website offers you a comprehensive range of support resources. These tools will help you identify and select the most suitable products for all your projects, check dimensions and specifications, and make your job on site easier. You can also access the latest technical knowledge, explore different case stories, watch training films, and much more.

What you will find:

Documentation
Our comprehensive collection of commercial and technical documentation will help you explain our products and solutions to your customers and identify the best products for specific projects.

You will find a wide range of useful and informative leaflets, case stories, technical datasheets, and instructions.

Tools
Videos and educational animations help build your knowledge of our products and the technologies behind them. Calculation tools and software help you prepare the on-site commissioning process.

Social media
Follow us on social media. For example you will find all our videos on our YouTube channel at www.youtube.com/DanfossHeating.

Danfoss quality management system certifications:

- ISO9001
- ISO14001
- PED
- TS 16949 compliant

We also comply with all EU directives and product approvals
