

Danfoss EVR v2

Enhanced reliability and savings in HVAC-R applications

Improved lifetime in high temperature conditions, appropriate for chillers, heat pumps, hot gas bypass and defrost

Single layer diaphragm improves the opening of the valve

New streamlined platform approved with more than

20

refrigerants comply with new regulations

Optimized orifice delivers best-in-class MaxOPD; reduces the needed coil power

Adequate for variable refrigerant flow

Drop-in design and easy servicing, reduce downtimes and redesign costs

30% range streamlining for inventory optimization
