**Application**

The BFPM range is a series of Danfoss oil pumps in combination with a highly efficient permanent magnet motor. The BFPM Electronic Controller must be used for controlling BFPM motor pumps (see separate data sheet for BFPM Electronic Controller).

BFPM 52 is designed for small domestic oil burners up to 24 l/h.

**BFPM 52 features:**
- Light oil and kerosene
- 1- or 2-pipe operation
- 2-stage
- Two built-in pressure regulators
- Solenoid valve cut-off
- Cartridge filter

**Function**

From the suction inlet (S) oil is drawn through the filter (H) to the gear set, where the pressure is increased. By means of the diaphragm (D) in the pressure regulator for stage 1 (T1), the pressure is kept constant at the value set on adjustment screw (P1).

When voltage is applied to the NC-valve, it opens and releases oil to the nozzle outlet. When voltage is applied to the NO-valve, it closes and puts the pressure regulator (T1) out of function. The pressure now rises to the value for stage 2 set on adjustment screw (P2).

In 2-pipe systems the excess oil is led back to the return outlet (R) and the tank. In 1-pipe systems with plugged return outlet (R) and screw (A) removed, the oil is returned internally to the gear set (see figure).

**Cut-off function, solenoid valve**

When the burner stops, the voltage to the solenoid valves is cut off.

The NO-valve opens and the NC-valve closes and cuts off the oil flow to the nozzle outlet immediately.

**Bleeding**

In 2-pipe systems the pump is self-priming, i.e. bleeding is performed via the constriction (O) to the return outlet (R).

In 1-pipe systems with plugged return outlet (R), bleeding must be performed through the nozzle outlet (E) or the pressure gauge port (P).

**Warranty**

For pumps used outside the stated technical data and used with oil containing abrasive particles Danfoss cannot give any warranty.

**Note!** The solenoid valve must be replaced after 250,000 operations or 10 years (approved life expectancy).
Identification

BFPM 52 L
L: left hand nozzle outlet
3: capacity 24 l/h
L: left hand rotation
2: two solenoid valves
5: two stages, two pressure regulators

Nozzle capacity at 4.3 cSt., 10 bar, 2800 min⁻¹
