Data sheet

Oil Pump Type BFP 10/11, sizes 8 & 12

Application

BFP 10/11 sizes 8 and 12 oil pumps are designed for medium/large-sized domestic oil burners up to 120 l/h.

BFP 10/11 features:
- Light oil and kerosene
- 1 or 2-pipe operation
- 1-stage
- Built-in pressure regulator
- Solenoid valve cut-off (BFP 11)
- Ring filter

Function

From the suction inlet (S) oil is drawn through the filter (H) to the gear set, where the pressure is increased. When voltage is applied to the NC-valve (normally closed), it opens and releases oil to the nozzle outlet.

By means of the diaphragm (D) in the pressure regulator (T) the pressure is kept constant at the value set on adjustment screw (P).

In 2-pipe systems the excess oil is led back to the return outlet (R) and the tank. In 1-pipe systems with plugged return outlet (R), bleeding must be performed through the nozzle outlet (E) or the pressure gauge port (P).

Bleeding

In 2-pipe systems the pump is self-priming, i.e. bleeding is performed via the constriction (O) to the return outlet (R).

In 1-pipe systems with plugged return outlet (R), bleeding must be performed through the nozzle outlet (E) or the pressure gauge port (P).

Warranty

For pumps used outside the stated technical data and used with oil containing abrasive particles Danfoss cannot give any warranty.

Note! The solenoid valve must be replaced after 250,000 operations or 10 years (approved life expectancy).
**Identification**

- **L**: left hand nozzle outlet
- **R**: right hand nozzle outlet
- **8**: capacity 80 l/h
- **12**: capacity 120 l/h
- **L**: left hand rotation
- **R**: right hand rotation
- **0**: without solenoid valve
- **1**: with one solenoid valve
- **1**: ring filter, pressure adjustment on side

Nozzle capacity at 4.3 cSt., 10 bar, 2800 min⁻¹

**Connections**

Example shows L-rotation pump with solenoid valve

- **P₁**: Pressure adjustment
- **S**: Suction inlet G1/4
- **R**: Return outlet G1/4
- **E**: Nozzle outlet G1/8
- **P**: Pressure gauge port G1/8
- **V**: Vacuum gauge port G1/8

Note! Shaft rotation, location of nozzle outlet and other connections are seen from shaft end.

- **RH**: R-rotation
- **LH**: L-rotation

**Change-over and Filter Replacement**

- **A**: 2-pipe operation, screw S without bypass washer
- **B**: 1-pipe operation, screw S with bypass washer
- **H**: Filter
