

Data Sheet

Float valve
Type **HFI**

Robust and reliable solution for high pressure control

HFI is a high pressure float valve with internal liquid measuring device. The float valve is designed for direct flange mounting or welding on to plate heat exchanger type condensers, as illustrated in [Figure 1: Plate heat exchanger](#)

HFI is direct acting, therefore no differential pressure is required to activate the valve.

HFI is robust and reliable due to its simple design. The float valve is equipped with a purge valve for purging non condensable gases e.g. air from the top of the valve housing. This feature is also useful if the valve has to be serviced.

The HFI is available with two external connections on the housing for drainage and pressure equalizations.

Features

- Designed for direct flange mounting on to plate heat exchanger type condensers
- Can be mounted directly on vessels
- Temperature range: -50 °C /+80 °C (-58 °F/+176 °F)
- Equipped with purge valve for purging non condensable gasses
- Available with external connections for drainage and pressure equalizations
- Maximum operating pressure is 25 bar (363 psig)
- Suitable for R717 (ammonia), HCFC and HFC with a density of 500 through 700 kg/m³ (31.21 - 43.70 lb/ft³). For densities outside this range please contact your local Danfoss sales company.
- Housing i.e. shell and flange are made of special steel approved for low temperature application
- Classification: DNV, CRN, BV, EAC etc. To get an updated list of certification on the products please contact your local Danfoss Sales Company.

Refrigerants

Refrigerants

Suitable for R717 (ammonia), HCFC and HFC with a density of 500 through 700 kg/m³ (31.21 - 43.70 lb/ft³). For densities outside this range please contact your local Danfoss sales company.

Flammable hydrocarbons are not recommended. For further information please contact your local Danfoss Sales Company.

New refrigerants

Danfoss products are continually evaluated for use with new refrigerants depending on market requirements.

When a refrigerant is approved for use by Danfoss, it is added to the relevant portfolio, and the R number of the refrigerant (e.g. R513A) will be added to the technical data of the code number. Therefore, products for specific refrigerants are best checked at store.danfoss.com/en/, or by contacting your local Danfoss representative.

Product specification

Design

Housing

Housing i.e. shell and flange is made of special steel approved for low temperature operation.

Installation

Refer to installation instruction for HFI.

Figure 2: Identification:

Pressure and temperature data

Table 1: Pressure and temperature

Description	Values
Temperature range	-50 °C / +80 °C (-58 °F / +176 °F)
The float valve is designed for: Maximum operating pressure	Housing PED 28 bar (407 psig) Ball (float) 25 bar (363 psig)

If test pressure exceeds 25 bar (363 psi g) the ball should be removed during test.

Valves for higher pressure are available on request.

The principle of high pressure control

Introduction

In installations with one application high pressure control is an effective and cost saving way of expanding liquid from the condenser to the low pressure side.

High pressure refrigerant entering the condenser will start to condense, consequently condensate will accumulate at the bottom of the condenser and in the float valve.

When capacity demands increase, the liquid level in the float valve will rise, which will cause the valve to open and the refrigerant to expand into the separator at the low pressure side.

When the valve is closed, there will still be a small by-pass over the seat, so any remaining liquid will equalize slowly to the low pressure side, for instance during an off cycle. Therefore the system will equalize automatically and the compressor can start up without excessive back pressure. The size of the bypass is predetermined and defined by geometry of the elements.

It follows from the above, that almost all the refrigerant will be accumulated on the low pressure side under normal conditions. Therefore under normal conditions no high pressure receiver is necessary when using the HFI for high pressure control.

Computation and selection

In R 717 plants (ammonia)

On the following pages you will find tables with capacities of the float valve at various operating conditions.

Select a valve using the specific operating conditions. The chosen valve must have a capacity higher than the required capacity during nominal operation, as well as during plant start up.

In plants using other refrigerants than ammonia

The capacity of the float valve can be calculated by using the values and the equation to the right. However, the density of the refrigerant must be in the range: 500 to 700 kg/m³.

For densities outside this range please contact your local Danfoss Sales Company.

Table 2: Valve capacity values

Valve type	Nominal capacity [kW] (R 717, -10/+35°C)	Valve constant [K]
HFI 040 FD	400	16.79

Volumes

Figure 16: Min. and Max. volumes

Internal volume (gross):	$11.4 \times 10^{-3} \text{ m}^3$ (3.01 US _{gal})
Internal volume with float ball:	$9.6 \times 10^{-3} \text{ m}^3$ (2.54 US _{gal})
Liquid volume at max. level:	$6.3 \times 10^{-3} \text{ m}^3$ (1.66 US _{gal})
Liquid volume at min. level:	$3.6 \times 10^{-3} \text{ m}^3$ (0.95 US _{gal})

Ordering

The table below is used to identify the valve required.

Example: HFI 040 D 100 = 148G3092

Table 21: Type of inlet connection size and nozzle size

Type	Inlet connection size	Nozzle size	Code numbers
HFI 040 FD 100	100 (4 in.) DIN Flange	40	148G3102
HFI 050 FD 100		50	148G3103
HFI 060 FD 100		60	148G3104
HFI 070 FD 100		70	148G3422
HFI 050 FD 150	150 (6 in.) DIN Flange	50	148G3105
HFI 060 FD 150		60	148G3106
HFI 070 FD 150		70	148G3423
HFI 040 D 100	100 (4 in.) DIN BW	40	148G3092
HFI 050 D 100		50	148G3093
HFI 060 D 100		60	148G3094
HFI 070 D 100		70	148G3418
HFI 050 D 150	150 (6 in.) DIN BW	50	148G3095
HFI 060 D 150		60	148G3096
HFI 070 D 150		70	148G3419
HFI 040 A 100	100 (4 in.) ANSI BW	40	148G3097
HFI 050 A 100		50	148G3098
HFI 060 A 100		60	148G3099
HFI 070 A 100		70	148G3420
HFI 050 A 150	150 (6 in.) ANSI BW	50	148G3100
HFI 060 A 150		60	148G3101
HFI 070 A 150		70	148G3421

Table 22: HFI with 2 external connections

Type	Inlet connection size	Nozzle size	Code numbers
HFI 040 FD 100 w. 2 ext. con	100 (4 in.) DIN Flange	40	148G3196
HFI 050 FD 100 w. 2 ext. con		50	148G3727

HFI 070 D 100 w. 2 ext. con		70	148G3720
HFI 050 D 150 w. 2 ext. con	150 (6 in.) DIN BW	50	148G3767
HFI 060 D 150 w. 2 ext. con		60	148G3768
HFI 070 D 150 w. 2 ext. con		70	148G3769

FD = inlet flange DIN

D = Butt welding DIN

A = Butt welding ANSI

Table 23: Connection types

Type	Code numbers
Insert for HFI 070 (complete insert with float ball - without float housing)	148G3584
Insert for HFI 060 (complete insert with float ball - without float housing)	148G3663
Insert for HFI 050 (complete insert with float ball - without float housing)	148G3662
Insert for HFI 040 (complete insert with float ball - without float housing)	148G3661

Accessories

Figure 17: Connection types

Table 24: Connection types

Type	Connection type	Quantity	Code no.
Welding nipple incl. aluminium gasket	G1/2-ND6	2 pcs.	14884184
Al gaskets included	1/4" FPT - 1/2" G	1 pc.	14883860
Al gaskets included	3/8" G - 1/2" G	1 pc.	14883861

Certificates, declarations, and approvals

The list contains all certificates, declarations, and approvals for this product type. Individual code number may have some or all of these approvals, and certain local approvals may not appear on the list.

Some approvals may change over time. You can check the most current status at danfoss.com or contact your local Danfoss representative if you have any questions.

Table 25: Pressure Equipment Directive (PED)

	The HFI-valves are approved in accordance with the European standard specified in the Pressure Equipment Directive and are CE marked.

Online support

Danfoss offers a wide range of support along with our products, including digital product information, software, mobile apps, and expert guidance. See the possibilities below.

The Danfoss Product Store

The Danfoss Product Store is your one-stop shop for everything product related—no matter where you are in the world or what area of the cooling industry you work in. Get quick access to essential information like product specs, code numbers, technical documentation, certifications, accessories, and more.

Start browsing at store.danfoss.com.

Find technical documentation

Find the technical documentation you need to get your project up and running. Get direct access to our official collection of data sheets, certificates and declarations, manuals and guides, 3D models and drawings, case stories, brochures, and much more.

Start searching now at www.danfoss.com/en/service-and-support/documentation.

Danfoss Learning

Danfoss Learning is a free online learning platform. It features courses and materials specifically designed to help engineers, installers, service technicians, and wholesalers better understand the products, applications, industry topics, and trends that will help you do your job better.

Create your Danfoss Learning account for free at www.danfoss.com/en/service-and-support/learning.

Get local information and support

Local Danfoss websites are the main sources for help and information about our company and products. Find product availability, get the latest regional news, or connect with a nearby expert—all in your own language.

Find your local Danfoss website here: www.danfoss.com/en/choose-region.

Spare Parts

Get access to the Danfoss spare parts and service kit catalog right from your smartphone. The app contains a wide range of components for air conditioning and refrigeration applications, such as valves, strainers, pressure switches, and sensors.

Download the Spare Parts app for free at www.danfoss.com/en/service-and-support/downloads.

Coolselector®2 - find the best components for you HVAC/R system

Coolselector®2 makes it easy for engineers, consultants, and designers to find and order the best components for refrigeration and air conditioning systems. Run calculations based on your operating conditions and then choose the best setup for your system design.

Download Coolselector®2 for free at coolselector.danfoss.com.
