Vickers® by Danfoss

Proportional Valves

Proportional Pressure Relief Valves

K(A)CG-6/8, 1* Series

Basic Characteristics

Max. pressure 350 bar (5000 psi) Max. flow rate . 400 L/min (106 USgpm) Mounting face to ISO 6264:

For K(A)CG-6 AR-06-2-A For K(A)CG-8 AS-08-2-A

General Description

These two-stage pressure relief valves (based on Vickers type CG2V valves featured in catalog 2323) offer extensive application possibilities through their ability to control the pressure setting in proportion to an applied electrical input (up to a pressure limit which is manually adjustable and lockable).

Two model types are available

KCG-6/8

The valve responds to variations of current input to its solenoid, for which separate Vickers drive amplifiers, with PWM output stage and output current control, are available.

The proportional pilot control stage is a Vickers type KCG-3 valve, described in catalog 2162.

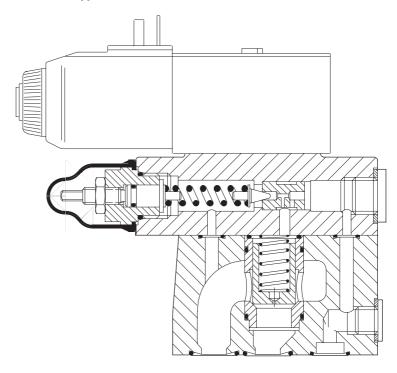

KACG-3

The addition of an integral amplifier allows the pressure to be controlled from a 0 to +10V, or 0 to -10V command signal range. The amplifier is mounted in a robust metal housing and electrical connections are via an industry standard 7-pin plug. Factory-set adjustments ensure high reproducibility valve -to-valve.

Features and Benefits

- With or without integrated electronics.
- Remote electrical proportional control of pressure from a choice of five pressure ranges per valve size.
- Excellent repeatability and stable performance results from cartridge design of mainstage elements.
- Low installed cost and space requirement from high power/size ratios (more than double that of many conventional designs).

KCG-6 Valve with Type "U" Coil Connection

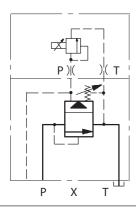

This product has been designed and tested to meet specific standards outlined in the European Electromagnetic Compatibility Directive (EMC) 89/336/EEC, amended by 91/263/EEC, 92/31/EEC and 93/68/EEC, article 5. For instructions on installation requirements to achieve effective protection levels, see this leaflet, the Installation Wiring Practices for Vickers Electronic Products leaflet 2468 and leaflet 02-123931A which is packed with every KA valve. Wiring practices relevant to this Directive are indicated by Eachtromagnetic Compatibility (EMC).

No restriction, provided that the valve is kept full of fluid through port T.
Ordering procedure	Valves, subplates, bolt kits and Vickers amplifiers should be ordered by full model code designation. Order ISO (DIN) electrical connectors by part number.

Performance Data

Typical with oil at 36 cSt (168 SUS) and at 50 °C (122 °F)

Pressure Override Off-Load Graphs show the minimum pressures obtainable:

- a) With 0 mA current to the solenoid coil
- b) When the valve is vented (see following explanation).

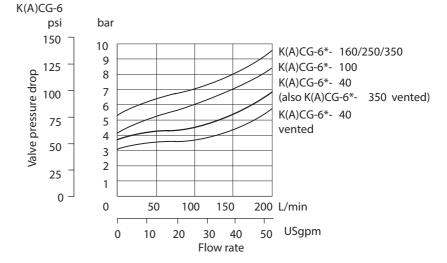

Venting

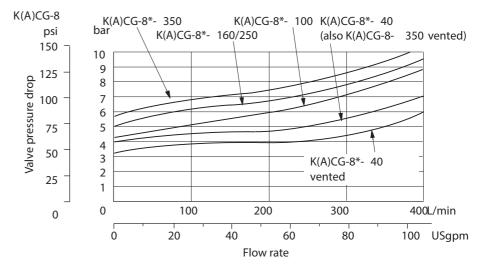

When the vent port X (or alternative vent port in the valve body) is connected to the reservoir via a suitable 2-way pilot valve, the mainstage of the relief valve opens to allow full flow from P to T at low pressure drop. The minimum pressure drop is obtained when the pilot valve is also de-energized. The total pressure drop through the venting 2-way valve and pipework is additive to the pressure at P.

While the valve is vented the system pressure cannot be controlled via the proportional solenoid.

This control feature is frequently used during off-load periods in machine cycle times. If lower off-load system pressures are required then additional full flow unloading valves are recommended, e.g. Vickers CV series cartridge valves.

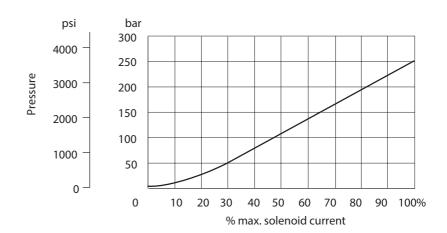

Note: All valves are with pilot valve de-energized.

Valid for models driven from Vickers amplifier with appropriate settings of gain and offset

Pressure Gain

Step Response

KACG models with factory settings of gain and offset. KCG models driven from Vickers amplifier with appropriate settings of gain and offset.

Test method

- 1. Trapped volume between pump and test valve, as in table.
- 2. Flow rate set at pump, as in table.
- 3. Response = time from step input signal until pressure reaches 90% of step change, as measured by transducer.

Valve size	Test conditions: Trapped volume	Flow rate	Step size: Pressure demand	Response time (ms)
6	2,0 liters (0.53 USg)	100 L/min (26 USgpm)	0 to 100% 100% to 0 25 to 100% 100 to 25%	100 70 40 50
8	4,0 liters (1.06 USg)	200 L/min (52 USgpm)	0 to 100% 100% to 0 25 to 100% 100 to 25%	110 70 50 65

KACG-6/8 Electrical Block Diagram

Wiring

Connections must be made via the 7-pin plug mounted on the amplifier.
Recommended cable sizes are:

Power cables:

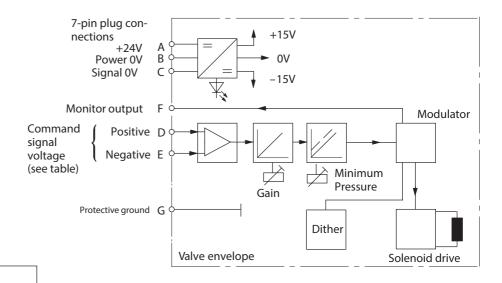

For 24V supply 0,75 mm ² (18 AWG) up to 20m (65 ft) 1,00 mm ² (17 AWG) up to 40m (130 ft)

Signal cables: 0,50 mm ² (20 AWG)

Screen:

A suitable cable would have 7 cores, a separate screen for the signal wires and an overall screen.

See wiring connection diagram on page NO TAG

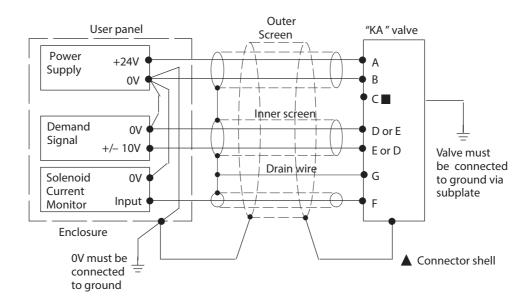

Warning

All power must be switched off before connecting or disconnecting any plugs.

KACG-6/8 Typical Connection Arrangements

Wiring Connections for Valves with integral Amplifier

■ Solenoid current monitor voltage (pin F) will be referenced to the KA valve local ground. A "local ground" (pin C) is provided for optional use by differential input customer supplied electronics.

Warning

Do not

Do not ground pin C. If the local ground (pin C) is not used for differential monitor electronics, do not use.

Read monitor pin F with respect to ground.

Warning

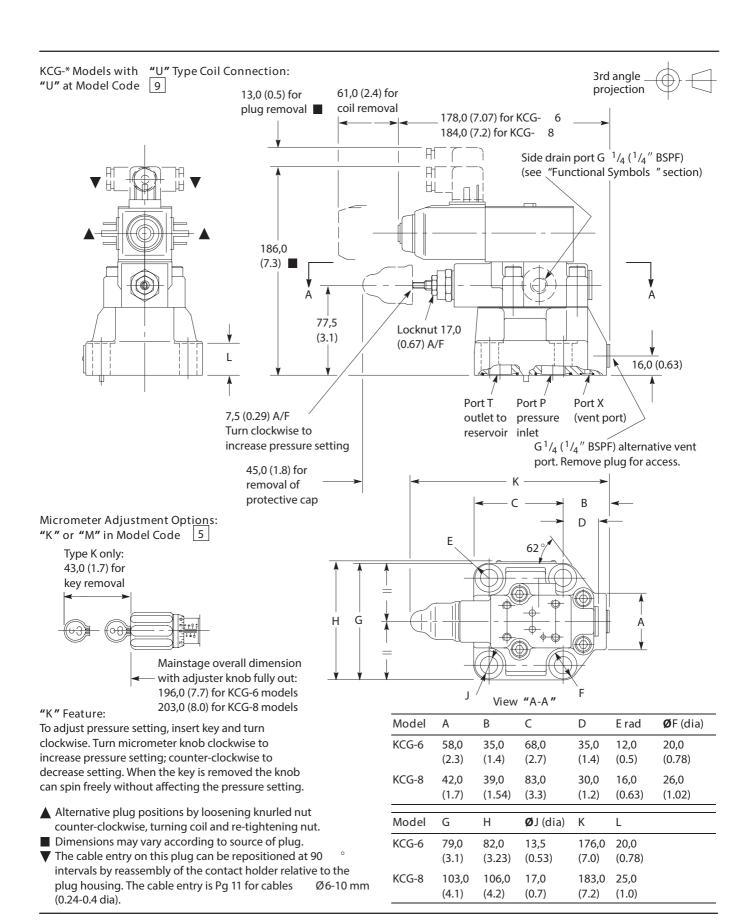

Electromagnetic Compatibility (EMC)

It is necessary to ensure that the valve is wired-up as above. For effective protection, the user electrical cabinet, the valve subplate or manifold, and the cable screens should be connected to efficient ground points. The metal 7-point connector, part no. 934939, should be used for the integral amplifier.

In all cases, both valve and cable should be kept as far as possible from any sources of electromagnetic radiation such as cables carrying heavy current, relays and certain kinds of portable radio transmitters, etc. Difficult environments could mean that extra screening may be necessary to avoid the interference.

It is important to connect the 0V lines as shown above. The multi-core cable should have at least two screens to separate the demand signal and monitor output from the power lines.

▲ Note: In applications where the valve must conform to European RFI/EMC regulations, the outer screen (shield) must be connected to the outer shell of the 7-pin connector and the valve body must be fastened to the earth ground. Proper earth grounding practices must be observed in this case, as any differences in command source and valve ground potentials will result in a screen (shield) ground loop.

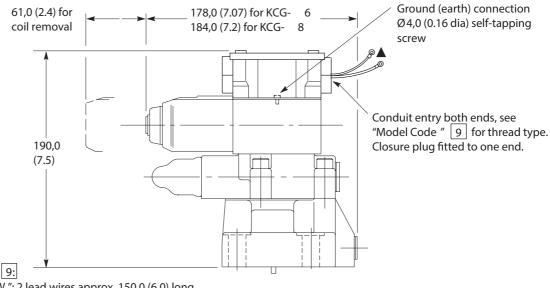

KCG-* Models with "F" Type Coil Connection: "F(T)W" or "F(T)J" at Model Code 9

3rd angle __ projection

For dimensions not shown see page 10.

▲ Ref. Model Code [9:]

Codes "FJ" and "FW": 2 lead wires approx. 150.0 (6.0) long.

M3 terminals provided for customer connection.

Codes "FTJ" and "FTW": Lead wires connected into terminal strip suitable for M3 terminals on customer connection.

KCG-*---EN46 Models for Use with Vickers UNIPLUG, Single Cable Connector:

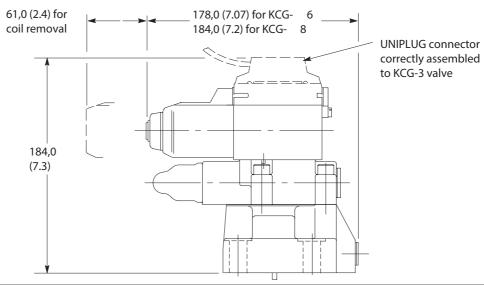

"P" at Model Code 9 "H" at Model Code 11

For use with Vickers single-cable UNIPLUG connectors: For "Soft Switch " Control: Use UNIPLUG model type EHH-AMP-724-C**-1* For Proportional Control: Use UNIPLUG model type EHH-AMP-724-D**-1*

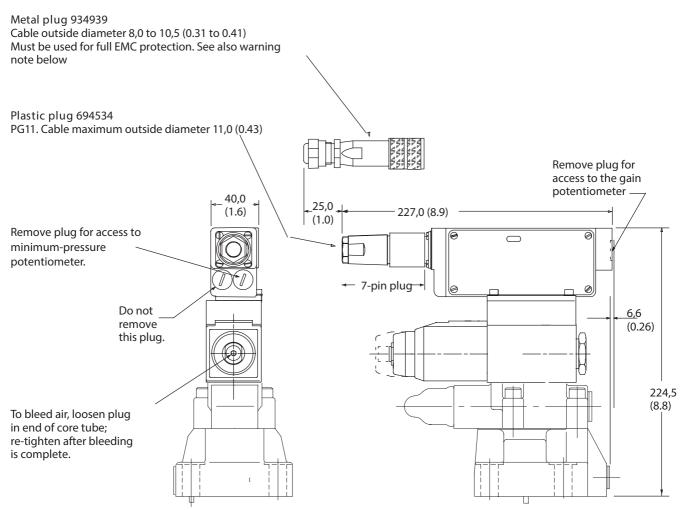

UNIPLUG model type EHH-AMP-724-D**-1* UNIPLUG connectors should be ordered separately; see catalog 2367.

To fit UNIPLUG connector to KCG-3 pilot valve: Unscrew coil retention nut and remove coil. Slide UNIPLUG connector onto dummy pins (at non-solenoid end) then replace coil, ensuring pins are fully engaged. Replace and tighten coil retention nut.

For dimensions not shown see page 10.

KACG-* Models (With integrated amplifier)

Warning

To conform to the EC Electromagnetic Compatibility directive (EMC) this KACG valve must be fitted with a metal 7-pin plug. The screen of the cable must be securely connected to the shell of the metal connector. A suitable IP67 rated connector is available from Vickers, part no. 934939. Alternatively a non IP67 rated connector is available from ITT-Cannon, part no.CA 02 COM-E 14S A7 P.

Additionally the cable must be fitted with a ferrite EMC suppression core not more than 4cm from the connector referred to above. Suitable types include Farnell 535-898 or Farnell 535-904 which snap fit over the cable. The plastic plug, part number 694534, is only suitable for use in a sealed electromagnetic environment or outside of the European Community.

Mounting Surfaces, ISO 6264 AR-06-2-A AS-08-2-A

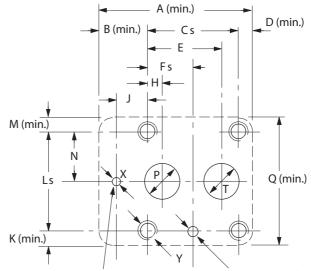

When a subplate is not used, a raised pad must be provided for mounting. The pad must be flat within 0,001 mm/ 100 mm (0.0001"/10") and smooth within 0,8 $\,\mu m$ (32 $\,\mu in$). Dimensional tolerances are \pm 0,2 mm ($\,\pm$ 0.008 ") except where indicated.

Port functions:

P = Pressure inlet

T = Outlet to reservoir

X = Vent, or remote control port

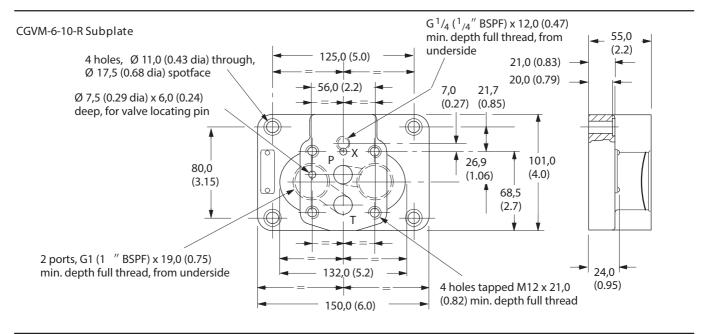

Plug or omit if this vent/hydraulic remote port is not to be used

Ø 7,5 (0.29 dia) x 6,0 (0.24) deep min.

Daikin-Sauer-Danfoss www.daikin-sauer-danfoss.com **Danfoss Power Solutions** is a global manufacturer and supplier of high-quality hydraulic and electric components. We specialize in providing state-of-the-art technology and solutions that excel in the harsh operating conditions of the mobile off-highway market as well as the marine sector. Building on our extensive applications expertise, we work closely with you to ensure exceptional performance for a broad range of applications. We help you and other customers around the world speed up system development, reduce costs and bring vehicles and vessels to market faster.

Danfoss Power Solutions – your strongest partner in mobile hydraulics and mobile electrification.

Go to www.danfoss.com for further product information.

We offer you expert worldwide support for ensuring the best possible solutions for outstanding performance. And with an extensive network of Global Service Partners, we also provide you with comprehensive global service for all of our components.

Further Information

Hydraulic Fluids
Materials and seals used in these valves
are compatible with:
Anti-wear petroleum oils L-HM
For use with non-alkyl based
phosphate esters, L-HFD, use F3
version in model code.

The extreme operating range is 500 to 13 cSt (270 to 70 SUS) but the recommended running range is 54 to 13 cSt (245 to 70 SUS). For further technical information about fluids see 694

Contamination Control Requirements Recommendations on contamination control methods and the selection of products to control fluid condition are included in Vickers publication 9132 or 561, "Vickers Guide to Systemic Contamination Control ". The book also includes information on the Vickers concept of "ProActive Maintenance". The following recommendations are based on ISO cleanliness levels at 2 μ m, 5 μ m and 15 μ m.

For products in this catalog the recommended levels are:
Up to 210 bar (3000 psi) 18/16/13
Above 210 bar (3000 psi)17/15/12

Installation and Start-up Guidelines The proportional valves in this catalog can be mounted in any attitude but it may be necessary, in certain demanding applications, to ensure that the solenoids are kept full of hydraulic fluid.

If this proves to be the case any accumulated air can be bled from the solenoid bleed screw. This task is easier if the valve has been mounted base downwards. Good installation practice dictates that the tank port, and any drain port, are piped so as to keep the valve full of fluid once the system start-up has been completed.

Temperatures For petroleum oil:

Min. -20°C (-4°F) Max.* +70°C (158 °F)

* To obtain optimum service life from both fluid and hydraulic system, 65°C (150°F) normally is the maximum temperature.

For other fluids where limits are outside those of petroleum oil, consult fluid manufacturer or Vickers representative. Whatever the actual temperature range, ensure that viscosities stay within those specified under "Hydraulic Fluids".

Ambient for:

Valves at full performance specification: -20 to +60 °C (-4 to +140 °F). Valves, as above, will operate at temperatures of 0 to -20 °C (32 to -4 °F) but with a reduced dynamic response.

Storage:

-25 to +85 °C (-13 to +185 °F)

Eurocard electronics: 0 to 50 °C (32 to 122 °F)

Seal Kits Pilot valves:

K(A)CG-3 (KA + DIN)02-138201 KCG-3 ('F' & 'P' versions) .. 02-145869

Mainstage valves:

K(A)CG-6 614824 K(A)CG-8 614931
