Application Data

Important Safety Information

⚠ Warning

Selection of Tubing

Selecting the proper tubing for a given application is essential to the proper operation and safe use of the tubing and related equipment. Inadequate attention to the selection of the tubing for an application can result in leakage, bursting, or other failure which can cause serious bodily injury or property damage from spraying fluids or flying projectiles. In order to avoid serious bodily injury or property damage resulting from selection of the wrong tubing, carefully review the information in this catalog. Some of the factors that are involved in the selection of the proper tubing

- · material of tubing
- bends
- tubing size
- temperature
- · tubing length
- tubing pressure rating
- tubing end connections
- installation design
- fluid conveyed (compatibility)

These factors and the other information in this catalog should be considered when selecting the proper tubing for an application.

Proper Selection of Tube Fittings

Selection of the proper Danfoss tube products for the application is essential to the proper operation and safe use of tubing and related equipment. Inadequate attention to the selection of the products for your application can result in tube leakage, bursting, or other failure which can cause serious injury or property damage from spraying fluids or flying projectiles. In order to avoid serious bodily injury or property damage resulting from selection of the wrong tube end fitting, carefully review the information in this catalog. Some of the factors which are involved in the selection of the proper products are:

- tube end connections
- installation design
- · compatibility with tubing
- tubing size
- temperature
- corrosion requirements

These factors and the other information in this catalog should be considered selecting the proper tube when for an application.

Tubing Installation

Proper installation of the tubing is essential to the proper operation and safe use of the tubing and related equipment. Improper installation of the tubing can result in serious injury or property damage. In order to avoid serious bodily injury or property damage resulting from improper installation of the tubing, carefully review the information in this catalog regarding tubing installation.

Some of the factors you must consider in installing the tubing properly are:

- proper installation procedures
- · changes in length
- protection from high temperature sources
- twisting
- stress
- rubbing and abrasion

These factors and other information in this catalog regarding tubing installation should be considered before installing the tubing.

Tubing Assembly

Changes in materials, finishes, and assembly techniques may affect the sealing or holding capability of the joint. Due to the great variety of possible assembly scenarios, assembly procedures should be tested to determine if the joint is adequate for its intended use. Improper assembly or overtightening could result in leakage, tubing separation or other failures which could cause serious bodily injury or property damage from spraying fluids or flying projectiles.

These factors and other information in this catalog regarding tubing assembly should be considered before installing the tubing.

Dimensions

Dimensions given in this catalog are approximate and should be used for reference only. Exact dimensional information for a given product is subject to change and varying tolerances.

Numbering Systems

48 X 6 ↑ ↑ ↑ Parts in this catalog are identified by a series of numbers separated by the letter "X."

- 1. The number preceding the "X" is the Catalog "Base Number" and indicates the type of connector. See Table 1 for additional base number data (sometimes referred to as dash size).
- 2. The second number is the tube and/or pipe size in sixteenths of an inch. When a pipe thread for a given tube size follows the SAE standard as shown in Table 2, no other number is required. Example: 48X6 = SAE 45° Flare Male Connector–3/8" tube, 1/4" Male Pipe.
- 3. If the pipe size is not to the SAE standard, another "X" is added followed by the pipe size indicated in sixteenths of an inch. Example: 1/8" is equal to 2/16" or X2 suffix.

In designating tube and pipe sizes for tees and crosses that are not SAE standard, indicate the sizes in the sequence shown.

Recommendation and Applicability

Application DataThread Identification

American Connections NPTF (National Pipe Tapered Fuel)

This connection is still widely used in fluid power systems, even though it is not recommended by the National Fluid Power Association (NFPA) for use in hydraulic applications. The thread is tapered and the seal takes place by deformation of the threads.

NPTF Threads

Measure thread diameter and subtract 1/4-inch to find the nominal pipe size.

| Inch Size | Dash Size | Nominal Thread Size | Male Threa O.D. Inch | d | Female Thr I.D. Inch | ead |
|--------------|--------------|---------------------------|-------------------------|---------|-------------------------|---------|

NPSM (National Pipe Straight Mechanical)

This connection is sometimes used in fluid power systems. The female half has a straight thread and an inverted 30° seat. The male half of the connection has a straight thread and a 30° internal chamfer. The seal takes place by compression of the 30° seat on the chamfer. The threads hold the connection mechanically.

Note: A properly chamfered NPTF male will also seal with the NPSM female.

Application DataThread Identification

American ConnectionsSAE J514 37° Hydraulic

This connection is very common in fluid power systems. Both the male and female halves of the connections have 37° seats. The seal takes place by establishing a line contact between the male flare and the female cone seat.

The threads hold the connection mechanically.

Caution:

In the -02, -03, -04, -05, -08 and -10 sizes, the threads of the SAE 45° flare and the SAE 37° flare are the same. However, the sealing surface angles are not the same.

Male Half Female Half

Application Data Thread Identification

American Connections SAE J512 Inverted

This connection is frequently used in automotive systems. The male connector can either be a 45° flare in the tube fitting form or a 42° seat in the machined adapter form. The female has a straight thread with a 42° inverted flare. The seal takes place on the flared surfaces. The threads hold the connection mechanically.

| Inch Size | Dash Size | Nominal Thread Size | Male Threa O.D. Inch | d | Female Thr I.D. Inch | ead |
|--------------|--------------|---------------------------|-------------------------|---------|-------------------------|---------|
| | | | Fraction | Decimal | Fraction | Decimal |

| 3/4 | 12 | 1-1/16-16 | 11/16 | 1.06 | 1 | 1.00 |

Application DataThread Identification

American Connections SAE J512 45° This connection is commonly used in refrigeration, automotive and truck piping systems. The connector is frequently made of brass. Both the male and female connectors have 45° seats. The seal takes place between the male flare the female cone seat. The threads hold the connection mechanically.

Caution:

In the -02, -03, -04, -05, -08 and -10 sizes, the threads of the SAE 45° flare and the SAE 37° flare are the same. However, the sealing surface angles are not the same.

Male Half

Female Half

Application Data Thread Identification

British Connections British Standard Pipe (BSP)

This BSPT (tapered) connection is similar to the NPT, except that the thread pitches are different in most sizes, and the thread form and O.D.s are close but not the same. Sealing is accomplished by thread distortion. A thread sealant is recommended.

The BSP (parallel) male is similar to the NPSM male except the thread pitches are different in most sizes.

The female swivel BSPP has a tapered nose/Globeseal flareless swivel which seals on the cone seat of the male.

BSPT/BSPP Threads

| Inch Size | Dash Size | Nominal Thread Size* | Male Thread O.D. Inch | | Female thr | ead |
|--------------|--------------|----------------------------|--------------------------|---------|------------|---------|
| | | | Fraction | Decimal | Fraction | Decimal |
| 1/8 | 02 | 1/8–28 | 3/8 | 0.38 | 11/32 | 0.35 |
| 1/4 | 04 | 1/4–19 | 33/64 | 0.52 | 15/32 | 0.47 |
| 3/8 | 06 | 3/8–19 | 21/32 | 0.65 | 19/32 | 0.60 |
| 1/2 | 08 | 1/2–14 | 13/16 | 0.82 | 3/4 | 0.75 |
| 5/8 | 10 | 5/8–14 | 7/8 | 0.88 | 13/16 | 0.80 |
| 3/4 | 12 | 3/4–14 | 11/32 | 1.04 | 31/32 | 0.97 |
| 1 | 16 | 1-11 | 15/16 | 1.30 | 1-7/32 | 1.22 |
| 1-1/4 | 20 | 1-1/4-11 | 1-21/32 | 1.65 | 1-9/16 | 1.56 |
| 1-1/2 | 24 | 1-1/2-11 | 1-7/8 | 1.88 | 1-25/32 | 1.79 |
| 2 | 32 | 2–11 | 2-11/32 | 2.35 | 2-1/4 | 2.26 |

^{*}Frequently, the thread size is expressed as a fractional dimension preceded by the letter "G" or the letter "R". The "G" represents a parallel thread and the "R" indicates a tapered thread.

For example, BSPP 3/8-19 may be expressed as G 3/8, and BSPT 3/8-19 may be expressed as R3/8.

Application Data Tubing Selection

Refer to safety information regarding proper selection of tubing and tube connectors on page 3.

To select tubing for a particular installation, two factors must be determined...

Tubing Types

1. Tubing Type: material and construction

2. Size:

Inside diameter (I.D.) and wall thickness. Information listed below will aid in your tubing selection. Commercial tubing is available in a wide variety of materials, types of construction and quality. Each is best suited for certain specific applications.

Aluminum Tubing

Seamless annealed is approved by SAE for low pressure applications.

Copper Tubing:

Seamless fully annealed coils and fully annealed or quarter-hard straight lengths can be used for systems that do not use petroleum based fluids (copper acts as an oil-oxidation catalyst, causing sludge).

Copper also tends to work harden when flared or bent and has poor resistance to vibration. Therefore, the use of copper tubing is limited to low-pressure stationary applications and air circuits.

Special Alloy Tubing:

May be required for specific corrosion problems. Information on these applications can be obtained from your tubing supplier or from tubing manufacturers.

Tubing Size

The two variables in tubing size are the inside diameter (ID) and the wall thickness. Each of these is dependent upon a number of factors.

Inside Diameter -

The tubing I.D. will determine the flow and velocity of the fluid in the system.

Flow is the volume of fluid that is to be moved through the line to perform a given job within a specified time. Flow rate is expressed in gallons per minute (gpm).

Velocity is the rate of speed at which the fluid passes through the line. It is expressed in feet per second (fps). With a given flow rate, the velocity will increase as the inside diameter of the tubing decreases.

Note:

To determine the appropriate tubing I.D. for specific flow rate and velocity, refer to the Velocity vs. Flow chart on page 21.

Wall Thickness

The required wall thickness of the tubing depends upon operating pressure, safety factor, temperatures, and tubing material.

Operating Pressure is the pressure of the fluid in the system. It is expressed in pounds per square inch (psi).

Safety Factor is a multiplier applied to the wall thickness that compensates for additional mechanical strains and hydraulic shocks to which the tubing may be subjected during operation.

Note:

To determine the appropriate wall thickness, refer to the data on page 22.

Pressure Drop

Total pressure supplied to a line must equal usable pressure (or output) plus the pressure that is lost through fluid transmission, which is referred to as pressure drop. These pressure drops cause loss of energy and should be kept to a minimum. Elements which cause pressure drop in the transmission of fluids include sudden enlargements or contractions, bends, fittings and valves. Mathematical analysis of pressure drop, although possible, is not precise because of the interrelationship of factors such as fluid velocity, density, flow area and friction coefficients. Therefore, to obtain optimum efficiency, the system (or the questionable portions of the system) should be mockedup to obtain empirical pressure drop data.

Application Data Tubing Selection

 $\overline{\mathbb{V}}$

Refer to safety information regarding proper selection of tubing and tube connectors on page 3.

Problem

Following is a typical problem that illustrates, step by step, the procedure for determining tube size.

Select Bundyweld tubing with the appropriate I.D. and wall thickness for the following conditions:

Flow - 5 gpm

Velocity - not to exceed 10 fps

Pressure - 2000 psi Safety Factor - 4:1

Solution

- 1. Using the Flow/Velocity chart on Page 21, follow the horizontal flow line (5 gpm) until it intersects the vertical velocity line (10fps). From this point, follow the diagonal line upward to get the required tube I.D. (.444). If the horizontal flow line and the vertical velocity line intersect between two diagonal lines, normally the larger inside diameter would be selected since it would mean less velocity.
- 2. Refer to the chart of Standard Size Hydraulic Tubing, below. Note that .444 I.D. tubing is not listed. If you want to use standard tubing, select one with a larger I.D. Do not select a smaller size since this would increase the velocity to over the 10 fps limit.

Therefore, by going to the next largest size, you would select the 5/8" O.D. tubing having an I.D. of .459 and a wall thickness of .083.

3. To determine whether this tubing will meet the pressure and safety factor requirements, refer to the Recommended Wall Thickness data on page 18. For 5/8" O.D. tubing at 2000 psi, the chart for Bundyweld indicates that the minimum wall thickness with a safety factor of 4:1 is .05952. Since you have selected a tubing with a .083 wall, this would easily fulfill the requirements. However, for savings on weight and cost, you can select another tubing with a thinner wall that will still meet the performance

requirements. Therefore, refer again to the chart on standard size tubing and select a tubing with a wall thickness closer to the minimum requirements. This would be the 5/8" O.D. tubing with a .509 I.D. and a .058 wall. This tubing will handle the pressure requirements of 2000 psi with a safety factor of 4:1, and also provides the required flow while keeping the velocity within the 10 fps limitation.

Standard Size Hydraulic Tubing

Application Data Tubing Selection

Flow/Velocity Chart

To Find Required Tube I.D.

Flow-20 gpm Velocity-9 fps

Follow horizontal flow line (20 gpm) until it intersects vertical velocity line (9 fps). From this point follow diagonal line to get required Tube I.D. –(.944).

To Find Permissible Flow

Velocity-15 fps Tube I.D.-.495

Follow vertical velocity line (15 fps) until it intersects diagonal line representing .495 tube I.D. Then project this point horizontally to get the permissible flow–(9 gpm).

To Find Velocity of Fluid in System

Flow-6 gpm Tube I.D.-.694

Follow horizontal flow line (6 gpm) until it intersects diagonal line representing .694 tube I.D. Then project this point vertically downward to get the velocity of fluid –(5 fps).

Application Data Tubing Selection

 \triangle

Refer to safety information regarding proper selection of tubing and tube connectors on page 3.

With the following recommended wall thickness tables the tubing wall can be selected that is best suited for a particular application. The data given in these tables are raw figures based on the equation:

 $\frac{t = Dp(FS)}{2S}$

t – wall thickness (inches)

D – O.D. of tube (inches)

p – pressure (psi)

FS - Safety Factor

S – tensile strength of tubing material

Therefore, many of the wall thicknesses given in these tables are not found on standard tubing, but serve to establish the minimum wall required.

Safety Factor

The standard safety factors indicate three grades of severity of service:

4:1 – mechanical and hydraulic shocks not excessive

6:1 – considerable mechanical strain and hydraulic shock

8:1 – hazardous applications with severe service conditions

The wall thickness shown in these tables are based on ultimate strength of material and a safety factor of 4:1.

To obtain the recommended wall for a specific pressure based on a safety factor of 6:1, multiply the wall thickness indicated in the table by 1.5. For a safety factor of 8:1, multiply by 2

Temperature

The wall thickness found by using these tables can be corrected for temperature by multiplying the wall thickness by the appropriate correction factor given in the chart below. The table is based on strength reduction due to increased temperature.

Recommended Wall Thickness

| Temperature | Copper | Aluminum |

Application Data

Tubing Installation

Note: Springing the tubing to force alignment places strain on fitting joints.

Nearly all industrial equipment now in service makes some use of fluid lines. From an economic point of view, the best fluid lines system is that which is easiest to maintain at the lowest original cost. The use of tubing and tube connectors on lines up to 2" diameter is usually more economical than the use of pipe and pipe connectors in modern installations. A few of the more important reasons follow:

- Size for size, tubing is lighter weight, easier to handle and can be bent more easily than iron pipe.
- 2. Ductile hydraulic tubing reduces the number of connections required, thus reducing material and labor costs. Bent tubing also reduces pressure drop and turbulence in the system.
- 3. Fewer joints means lower costs and fewer points of potential leakage.
- The use of tube connectors makes every joint a union, permitting easier, faster maintenance and repair work.
- Modern flared and flareless tube fittings eliminate the need for threading, soldering, or welding.

Tube Bending

Tubing should be bent wherever possible to reduce the number of connectors.

Copper tubing can be bent easily with a hand bender. Steel tubing can be bent in sizes 1/8" to 5/8" O.D. by using a hand bender designed for steel tubing. For production quantities, or for sizes larger than 5/8" O.D., a power bender is generally used.

Tubing should be bent accurately. Tubing manufacturers will advise the correct radii for various types and wall thicknesses of tubing. Kinks, flattened bends, wrinkles and tube breakage or loss should be avoided by the use of proper tube bending equipment.

Precautions

Avoid straight line connections wherever possible, especially in short runs.

Design piping systems symmetrically. They are easier to install and present a neat appearance.

Care should be taken to eliminate stress from tubing lines. Long tubing runs should be supported by brackets or clips. All parts installed on tubing lines such as heavy fittings, valves, etc., should be bolted down to eliminate tubing fatigue.

Before installing tubing, inspect the tube to see that it conforms to the required specifications, is of the correct diameter and wall thickness and is not out of round.

Cut tube ends reasonably square and lightly deburr inside and outside edge. Chamfer on outside edge will destroy bearing of tube end on the connector seat.

To avoid difficulty in assembly and disconnecting, a sufficient straight length of tube must be allowed from the end of the tube to the start of the bend. Allow twice the length of the nut as a minimum.

Tubes should be formed to assemble with true alignment to the center line of the fittings, without distortion or tension.

Tubing which has to be sprung from position, "A", (see Fig. 4), to be inserted into the connector has not been properly fabricated, and when so installed and connected, places the tubing under stress.

When assembling the tubing, insert the longer leg to the connector as at "C" (Fig. 4). With the nut free, the short leg of the tubing can be easily moved and brought to proper position with and inserted into the seat in connector "D". The nuts can then be tightened as required.

Application DataChemical Compatibility Chart

Refer to safety information regarding proper selection of tubing and tube connectors on page 3.

These tables alphabetically list commonly used materials of various chemical composition. After each agent listing you will find the basic tubing and connector materials rated according to their chemical resistance to each individual agent. The chart is intended to be used as a guide only. Many factors (concentration, temperature, intermittent or continuous exposure, etc.) have a bearing upon the suitability of any tubing or connector for any

specific application, and these factors must be considered by you as you review the chemical compatibility chart.

Where unusual conditions exist or where questions arise, consult Danfoss for expert assistance on your tubing application requirements.

Note: All data given herein is believed to be accurate and reliable but presented without guarantee, warranty, or responsibility of any kind, express or implied, on our part. Chemical resistance will vary with the wide diversity of possible mixtures and service conditions. It is not therefore possible to give any guarantee whatsoever in individual cases. Danfoss Eclipse® and Solstice™ tubing should only be used in air brake applications.

Note:

For plastic tube cutter, see page 141.

Part Number Key:

PT200 Polyvinyl Chloride

 \bigcirc

Typical Application:

Soft, pliable, plasticized PVC Resin Tubing, for practically any low pressure laboratory, industrial, agricultural or domestic application.

Temperature Range:

-5°F to +105°F (-20°C to +41°C)

Available Colors: Clear (suffix NA)

Connectors:

Polyline pgs. 58-61 SelfAlign pgs. 52-57 with 2030x insert

Compression pgs. 46-51 with 2030x insert

Molded Compression pgs. 132-139

PT230 Polyamide "Nylon 6/6"

Natural off-white compound covered under 21CFR177.1500 regulations for food contact.

Typical Application:

Semi-rigid general purpose tubing.

Temperature Range:

-40°F to +180°F (-40°C to + 82°C)

Available Colors:

Natural off-white (NA) and black (BK). FDA colors available on request.

Contains:

Ultra-Violet Stabilizer in black tubing.

Connectors:

Note:

For plastic tube cutter, see page 141.

Part Number Key:

PT240 Polyethylene

Meets FDA for food contact. Natural off-white compound covered under 21CFR177.1520 regulations for food contact.

Typical Application:

Economical, flexible, low density Polyethylene has a wide range of uses in industrial and agricultural applications.

Temperature Range:

-40°F to +135°F (-40°C to +57°C)

Available Colors:

Natural off-white (NA), black (BK), yellow (YW), orange (OR), blue (BU), red (RD), green (GN). FDA colors available on request. Refer to current price list for availability of colors.

Contains:

Ultra-Violet Stabilizer in black tubing.

TP160 Polyamide "Nylon 11"

Typical Application:

Flexible nylon tubing. Used for instrumentation; lubrication and air lines; gas, chemical and oil processing; low pressure hydraulics.

Temperature Range:

-40°F to +200°F (-40°C to +93°C)

Available Colors:

Black (BK) or natural (NA).

Contains:

Ultra-Violet Stabilizer

Connectors:

Note:

For plastic tube cutter, see page 143.

Part Number Key:

MTP160 Polyamide "Nylon 11" Metric Tubing

Typical Application:

Flexible nylon tubing. Used for instrumentation; lubrication and air lines; gas, chemical and oil processing; low pressure hydraulics.

Temperature Range:

-40°F to +200°F (-40°C to +93°C)

Available Colors: Natural (NA).

Contains:

Ultra-Violet Stabilizer

Connector:

Metric Push>Connect pgs. 69-72

Features

- Superior abrasion resistance
- East of cutting
- Enhanced flexibility and extension
- · Flow performance

Applications

- Truck air brake systems
- Trailer air brake systems

- Auxiliary air systems
- Formed tubes
- Formed and straight air brake harness assemblies

Construction

- Distinctive patented construction
- 100% polyamide construction with polyester yarn reinforcement

UV stabilized

- Thermoformable
- Available in standard and custom colors
- Available in all standard sizes

Temperature Range

• -65°F to 200°F (-54°C to 93°C).

Connectors:

QCAB pages 81-89 1400 series Air Brake pages 90-95

For 1/8" Tubing use Selfalign.

Note: SelfAlign Connectors are not designed to meet DOT standards.

Solstice™ Type A Air Brake Tubing

Meets or exceeds the performance requirements SAE J844, J1131, J2494-3, and DOT FMVSS106 Synflex Solstice Type Air Brake Tubing

Brass Products Introduction

Danfoss brass tube fittings are made from high quality UNS CA-360 brass bar. Danfoss brass connectors are precision machined to meet SAE standards and specifications. Large, uniform wrench pad areas have standard dimensions for easy assembly and disassembly using standard open-end wrenches. On fittings where pipe threads are used, the fittings are standardized on Dryseal American National Standard Taper. Danfoss offers the only complete line of brass connectors with these outstanding advantages.

Hot Extrusion

A cast billet is heated and extruded through a die containing the desired configuration. This process recrystallizes the weaker cast structure into the stronger pressed structure of the shaped extrusion.

Cold Draw

The hot extruded shape is pulled through a die with the same configuration but less cross sectional area. This further recrystallizes and refines the structure while increasing the strength and elongation. In addition, the dimensions are brought to close tolerances.

Hot Extrusion

Cold Draw

Shapes

The dies through which the billets are forced may be one of hundreds of shapes. Four of the most common shapes, used in the manufacture of Danfoss connectors, are illustrated.

Saw and Machine

The cold bar stock is then cut into individual pieces for precision machining. After the part is machined, it is ready for the market as a strong, tough, high quality connector. Only by using this process is it possible to get the big all-flat sides on elbows and tees, instead of the usual small wrench pads, or lack of flats all together.

Microstructure

The photomicrographs illustrate the change in microstructure from the low strength low ductility dendritic structure of the cast billet, to the recrystallized structure of the hot extrusion, to the refined structure of the high strength high ductility cold drawn rod.

Typical Application:

Hydraulic brake, power steering, fuel lines and transmission cooler lines, LP and natural gas (special order).

Pressure:

Working pressure up to 2000 psi depending on tube size. Will withstand burst pressure of standard tubing - up to 5000 psi with bundy-weld (double flared) and 3500 psi with copper tubing, depending on size.

Vibration:

Excellent resistance.

Temperature Range:

-65°F to +250°F (-53°C to +121°C) range at maximum operating pressures.

Material:

CA360 Brass.

Used With:

Copper, brass, aluminum and steel hydraulic tubing that can be flared. See pages 25-29 for material compatibility.

Advantages:

Very low cost and reusable. Seats and threads are internal and protected. Compact, excellent vibration life. Short nut affords very close tube bends. Steel or brass tube nut.

Conformance:

Listed by Underwriter's Laboratories (available on special order) for fuel equipment, refrigeration and gas. Meets specifications and standards of ASA, ASME, SAE and MS (Military Standards).

How to Order:

Order individually by catalog number.

Note:

Refer to current price list for availability of cataloged items. Configurations and dimensions subject to change without notice. Additional information can

be found in SAE J512.

Label Set:

W-8022 (adhesive) CL-490 (non-adhesive)

Assembly Instructions:

- Cut tubing to desired length. Make sure all burrs are removed and the ends are cut square.
- 2. Slide nut on tube. Threaded end "A" of nut must face out.
- 3. Flare end of tube with a 45° flaring tool. See page 23 for flare data.
 - a. Measure flare diameter.
 - b. Examine flare for excessive thin out.
 - c. On thin wall, welded or brazed tubing, use double flare to prevent pinchoff and cracked flares.
- 4. Lubricate threads and assemble to connector body. Nut should be turned hand tight.
- Tighten assembly with a wrench until a solid feeling is encountered. From that point, apply a one-sixth turn.

Note:

Do not over-torque as it may damage the connectors or split the tubing at the flare.

Typical Application:

LP and natural gas, flammable liquids (special order), instrumentation, refrigeration, power steering, hydraulic and pneumatic systems.

Pressure:

Working pressure up to 2000 psi depending on tube size. Will withstand burst pressure of standard tubing - up to 5000 psi with bundy-weld (double flared) and 3500 psi with copper tubing, depending on size.

Vibration:

Good resistance - use long nut when greater vibration resistance is required.

Temperature Range:

-65°F to +250°F (-53°C to +121°C) range at maximum operating pressures.

Material:

CA360 Brass.

Used With:

Copper, brass, aluminum and steel hydraulic tubing that can be flared.
See pages 25-29 for material compatibility.

Advantages:

Low cost and reusability, long or short nut. Good resistance to vibration.

Conformance:

Listed by Underwriter's Laboratories (available on special order) for flammable liquids, refrigeration and gas. Meets specifications and standards of ASA, ASME, SAE and MS (Military Standards).

How to Order:

Order individually by catalog number.

Note:

Refer to current price list for availability of cataloged items. Configurations and dimensions subject to change without notice. Quotations of nonstock items available upon request. Additional information can be found in SAE J512.

Assembly Instructions:

- 1. Cut tubing to desired length. Make sure all burrs are removed and the ends are cut square.
- 2. Slide nut on tube. Threaded end "A" of nut must face out.
- 3. Flare end of tube with a 45° flaring tool. See page 23 for flare data.
 - a. Measure flare
 - b. Examine flare for excessive thin out.
- Lubricate threads and assemble to connector body. Nut should be turned hand tight.
- Tighten assembly with a wrench until a solid feeling is encountered. From that point, apply a one-sixth turn.

Note:

Do not over-torque as it may damage the connector or split the tubing at the flare.

Label Set:

W-8022 (adhesive) CL-490 (non-adhesive)

Note:

For additional technical questions, contact Technical Support at 1-888-258-0222.

Refer to safety information regarding proper selection of tubing and tube connectors on page 3.

Brass Products Compression

Note:

For additional technical questions, contact Technical Support at 1-888-258-0222.

Refer to safety information regarding proper selection of tubing and tube connectors on page 3.

| Tube O.D. | 1/8 | 3/16 | 1/4 | 5/16 | 3/8 | 7/16 | 1/2 | 5/8 | 3/4 | 1 |
|------------------|---------|--------|---------|--------|---------|--------|----------|----------|------|----------|
| Thread Size-B | 5/16-24 | 3/8-24 | 7/16-24 | 1/2-24 | 9/16-24 | 5/8-24 | 11/16-20 | 13/16-18 | 1-18 | 1-1/4-18 |

Typical Application:

Instrumentation, hydraulic and pneumatic systems.

Pressure:

Working pressure up to 2000 psi with a 4:1 safety factor depending on tube size. When using plastic tubing, use the working pressure for type used.

Vibration:

Fair resistance - use long nut when greater vibration resistance is needed.

Temperature Range:

65°F to +250°F (-53°C to +121°C) with metal tubing. When using compatible plastic tubing do not exceed the tubing temperature range. (Refer to tubing temperature range.)

Material:

CA360 Brass.

Used With:

Aluminum, copper and plastic tubing.

Plastic tubing, except for PT230 and TP160, requires 2030x insert. Not recommended for steel tubing. See pages 25-29 for material compatibility, and pages 30-33 for plastic tubing.

Advantages:

Low cost. Easy to assemble, no flaring. Available with long or short nut. Broad selection of styles and sizes.

Conformance:

Meets specifications and standards of ASA, ASME and SAE.

How to Order:

Compression connectors are ordered as complete assemblies (body, nut and sleeve). To order assembly supplied with long nuts, simply add the prefix "1" to the catalog number. Example: 68x4 with long nut becomes 168x4. Nuts and sleeves can be ordered separately by catalog number. To order bodies only (less nut and sleeve). prefix catalog number with letter "B". Example: B68x4.

Note:

Refer to current price list for availability of cataloged items. Quotations and delivery of non-stock items supplied on request. Configurations and dimensions subject to change without notice. Additional information can be found in SAE J512.

Assembly Instructions:

- 1. Cut tubing to desired length.
- Slide nut and then sleeve on tube. Threaded end "A" of nut must face toward connector.
- Insert tubing into connector body. Be sure tubing is bottomed on connector shoulder.
- 4. Lubricate threads and assemble nut to connector body.
- 5. Tighten nut hand tight. From that point, tighten with a wrench the number of turns indicated in the chart below.

| Tube Size | Additional turns From Hand Tight |
|----------------|-------------------------------------|
| 1/8" thru 1/4" | 1-1/4 |
| 5/16" | 1-3/4 |
| 3/8" thru 1" | 2-1/4 |

Label Set:

W-8022 (adhesive) CL-490 (non-adhesive)

Typical Application:

Instrumentation, hydraulic and pneumatic systems.

Pressure:

Working pressure up to 2000 psi with a 4:1 safety factor depending on tube size. When using plastic tubing, use the working pressure for type used.

Vibration:

Good resistance - use long nut when greater vibration resistance is needed.

Temperature Range:

-65°F to +250°F (-53°C to +121°C) with metal tubing. When using compatible plastic tubing do not exceed the tubing temperature range. (Refer to tubing temperature range.)

Material:

CA360 Brass.

Used with:

Aluminum, copper and plastic tubing.

Plastic tubing, except for PT230 and TP160, requires 2030x insert. Not recommended for steel tubing. See pages 25-29 for material compatibility, and pages 30-33 for plastic tubing.

Advantages:

Very low cost and reusable. Self aligning - no need to disassemble fitting to line up sleeve on tube. Low cost. Easy to assemble, no flaring. Available with long or short nut. Broad selection of styles and sizes.

Conformance:

An exclusive product design, user approvals only.

How to Order:

Selfalign connectors are ordered as complete assemblies (body, nut and sleeve). To order assembly supplied with long nuts, simply add the prefix "1" to the catalog number. Example: 681x4 with long nut becomes 1681x4. Nuts and sleeves can be ordered separately by catalog number. To order bodies only (less nut and sleeve), prefix catalog number with the letter "B" and drop suffix number. Example: B68x4.

Note:

Refer to current price list for availability of cataloged items. Quotations and delivery of non-stock items supplied on request. Configurations and dimensions subject to change without notice.

Assembly Instructions:

- 1. Cut tubing to desired length.
- Slide nut and then sleeve on tube. Threaded end of nut "A" and small end of sleeve "B" must face toward fitting.
- Insert tubing into connector body. Be sure tubing is bottomed on connector shoulder.
- 4. Lubricate threads and assemble nut to connector body.
- 5. Tighten with wrench to the "ring grip" point.
- a. Ring Grip is the point when the cutting edge of the sleeve grips the tube. This is determined by turning tube slowly but firmly by hand while tightening the nut with a wrench until tube can no longer be turned by hand and a sharp increase in torque is noticed.
- 6. Tighten additional turns past "ring grip" as indicated on chart. Refer to page 53.

Label Set:

CL-500 (non-adhesive)

SelfAlign Assembly

Ring Grip is the point when the cutting edge of the sleeve grips the tube. This is determined by turning tube slowly but firmly by hand while tightening the nut with a wrench until tube can no longer be turned by hand and a sharp increase in torque is noted.

| Support Dia. (D2) | .120 | .166 | .180 | .245 | .370 |

Typical Application:

Pneumatic instrumentation circuits, lubricant and cooling lines.

Pressure:

Working pressure up to 500 psi with a 4:1 safety factor depending on tubing. When using plastic tubing, use the working pressure for type used.

Vibration:

Excellent resistance.

Temperature Range:

When using compatible plastic tubing do not exceed the tubing temperature range. (Refer to tubing temperature range.)

Material:

CA360 Brass body, plastic sleeve.

Note:

Not recommended for use with PT230, TP160 or Air Brake tubing.

Used With:

PT200 and PT240 plastic tubing. Not recommended for metal tubing. See pages 25-29 for material compatibility and pages 30-33 for plastic tubing.

Advantages:

No flaring of tubing required. Easy installation, captive sleeve, pre-assembled for installation and can be reassembled.

Conformance:

An exclusive product design. User approvals only.

How to Order:

Order 1/4" O.D. tubing with .040 wall, use suffix x4. Example: 1262x4. When .062 wall is desired, use suffix x46. Example: 1262x46.

Ordered as complete assemblies (body, nuts and sleeves) by catalog number. Nuts, sleeves and nut/sleeve assemblies can be ordered separately by catalog number.

Note:

Refer to current price list for availability of cataloged items. Quotations and delivery of non-stock items supplied on request. Configurations and dimensions subject to change without notice.

Assembly Instructions:

- 1. Cut tubing to desired length.
- Slide nut/sleeve assembly on tube. Threaded end "A" of nut must face toward connector.
- 3. Bottom tubing into the connector.
- 4. Tighten nut, hand tight.

Label Set:

FS-2100 (adhesive) CL-498 (non-adhesive)

Note:

For additional technical questions, contact Technical Support at 1-888-258-0222.

Refer to safety information regarding proper selection of tubing and tube connectors on page 3.

Push>Connect

See Push>Connect Products on pages 57-61.

Typical Application:

Compressed air, pneumatic instrumentation, circuit, lubricant and cooling lines.

Pressure:

Up to 250 psi depending on tube size.

Sealing Method:

O-Ring of Buna-N Construction.

Temperature Range:

When using compatible plastic tubing do not exceed the tubing temperature range (Refer to tubing temperature range).

Material:

Brass, Nickel Plated.

Vacuum:

Fittings rated at 29.5 inches of mercury vacuum.

Used With:

PT230 and TP160 nylon, and PT240 Polyethylene tubing. See pages 25-29 for material compatibility and pages 30-33 for plastic tubing.

Advantages:

Ease of assembly. No tools required, reusability of connectors and the time savings of assembly and disassembly.

Hex Dimensions:

All hexes are in inches.

How to Order:

Individually by catalog number.

Note:

Refer to current price list for availability of cataloged items. Quotations and delivery of non-stock items supplied on request. Configurations and dimensions subject to change without notice.

Assembly Instructions:

- 1. To connect, simply push the tubing into the connector.
- 2. To disconnect, depress the collet ring with two fingers and withdraw.

Label Set:

CL-499 (non-adhesive)

Push>Connect Metric

See Push>Connect Products on pages 62-65.

| Nominal Size | 2 | 4 | 5MM | 6 | 8 | |
|--------------|-----------|-----------|---------|-----------|-----------|--|
| Thread | | | | | | |
| MM | | | M5 x .8 | | | |
| BSPT | 1/8 (2PT) | 1/4 (4PT) | | 3/8 (6PT) | 1/2 (8PT) | |
| BSPP | 1/8 (2PP) | 1/4 (4PP) | | 3/8 (6PP) | 1/2 | |

Typical Application:

Compressed air, pneumatic instrumentation, circuit, lubricant and cooling lines.

Pressure:

Up to 250 psi depending on tube size.

Sealing Method:

O-Ring of Buna-N Construction.

Temperature Range:

-40°F to 200°F (-40°C to 93°C).

Material:

Brass, Nickel Plated.

Used With:

MTP160 nylon tubing. See pages 25-29 for material compatibility and pages 30-32 for plastic tubing.

Advantages:

Ease of assembly. No tools required, reusability of fittings and the time savings of assembly and disassembly.

Hex Dimensions:

All hexes are metric.

How to Order:

Individually by catalog number.

Note:

Refer to current price list for availability of cataloged items. Quotations and delivery of non-stock items supplied on request. Configurations and dimensions subject to change without notice.

Assembly Instructions:

- 1. To connect, simply push the tubing into the connector.
- 2. To disconnect, depress the collet ring with two fingers and withdraw.

Suffix Chart:

MM - Metric Screw Thread

MMS - Metric Screw Thread Swivel

MRP - Metric Red Plug

PP - British Parallel Plug

PPS - British Parallel Pipe Swivel

PT - British Tapered Pipe

PTS - British Tapered Pipe Swivel

Note:

For additional technical questions, contact Technical Support at 1-888-258-0222.

Refer to safety information regarding proper selection of tubing and tube connectors on page 3.

Push>Connect Flow Controls

See Push>Connect Products on pages 71-72.

Typical Application:

Compressed air, pneumatic instrumentation, circuit, lubricant and cooling lines. Also excellent for assembly equipment and cylinder control.

Pressure:

Up to 250 psi depending on tube size.

Sealing Method:

O-Ring of Buna-N Construction. (Viton available on request by special order.)

Temperature Range:

0°F to +160°F (-17.8°C to +71°C)

Material:

Brass, Nickel Plated.

Used With:

PT230 and TP160 nylon, and PT240 Polyethylene tubing. See pages 25-29 for material compatibility and pages 30-33 for plastic tubing.

Advantages:

Ease of assembly. No tools required, reusability of connectors and the time savings of assembly and disassembly. These flow controls have a simple design, but offer excellent ability to control the speed of a cylinder or motor.

Hex Dimensions:

All hexes are in inches.

How to Order:

Individually by catalog number.

Note:

Refer to current price list for availability of cataloged items. Quotations and delivery of non-stock items supplied on request. Configurations and dimensions subject to change without notice.

Assembly Instructions:

- 1. To connect, simply push the tubing into the connector.
- 2. To disconnect, depress the collet ring with two fingers and withdraw.

Cartridge

Cartridge body is not Nickel-plated.

Brass Products Push>Connect Plus

Danfoss is proud to announce three design changes to Push>Connect products. The introduction of a low profile, sure-seal design for male NPTF threaded fittings is here. Also, an improved collet design will allow use with all types of tubing from Nylon to 90A durometer Polyurethane, including Polyethylene, and PVC tubing. Lastly, the male swivel design provides greater strength and stability.

Below is a summary of features and benefits for the newly named Push>Connect Plus.

Perfect thread seal:

A captured Teflon* ring around the base of the hex shoulder, seals similar to a reusable (SAE type) seal eliminates thread sealant and loose particles associated with thread sealant.

Lower Profile:

Push>Connect Plus has a lower profile for those tight places. A shorter thread design eliminates exposed threads where dirt and bacteria can collect (ideal for food processing and hygienic applications).

More Versatility:

The new brass collet is designed for use with all types of tubing from Nylon to 90A durometer Polyurethane, including Polyethylene, and PVC tubing.

Super-quick Installations: New short thread length means fewer turns and super-quick installations.

Note:

For additional technical questions, contact Technical Support at 1-888-258-0222.

Improved Swivel Design:

Strength and stability have been engineered into the new male swivel.

Universal Thread:

Use with NPT, BSPP, and BSPT ports.

The new part will have a 'P' in the part number to signify the new design. An example of this change is previous #1169x4S becomes #1169Px4S. Current Push>Connect parts with 10-32UNF threads and ending in 'A' (eg.1168x2A) will continue with the current thread design.

Note:

For additional technical questions, contact Technical Support at 1-888-258-0222.

Refer to safety information regarding proper selection of tubing and tube connectors on page 3.

Common Dimensions of Barbed End.

| Tubing O.D. | D | E | J |
|-------------|------|------|------|
| 5/32 | .062 | .113 | .380 |
| *3/16 | .078 | .125 | .500 |
| 1/4 | .127 | .189 | .500 |
| 3/8 | .196 | .270 | .500 |
| 1/2 | .312 | .395 | .630 |

^{*}No barb on 3/16" size.

Typical Application:

Temperature control circuits, test apparatus, lubricant, coolant lines, pneumatic circuits, vacuum and fluid systems.

Pressure:

Will withstand burst pressures of plastic tubing.

Vibration:

Excellent resistance.

Temperature Range:

Depends on tubing used.

Material:

CA360 Brass.

Used With:

PT240 Polyethylene tubing. See pages 25-29 for material compatibility and pages 30-32 for plastic tubing.

Advantages:

Quick connecting - no tube preparation. Hand assembly. Low cost one-piece push-on design. Barbed lip provides safe, positive connection. Compact size permits use in extremely tight areas.

Conformance:

An exclusive item with Danfoss. User approvals only.

How to Order:

Individually by catalog number.

Note:

Refer to current price list for availability of cataloged items. Quotations and delivery of non-stock items supplied on request. Configurations and dimensions subject to change without notice.

Assembly Instructions:

- 1. Push the tubing over insert.
- 2. Bottom the tubing against connector body.

Label Set:

FS-1000 (adhesive) CL-496 (non-adhesive)

Brass Products Quick>Connect Air Brake - Brass & Composite

Note:

For additional technical questions, contact Technical Support at 1-888-258-0222.

Refer to safety information regarding proper selection of tubing and tube connectors on page 3.

Typical Application:

Air brake systems except where temperatures exceed +200°F or where battery acid can drip on tubing. Not for fuel, water or oil.

Pressure:

Vacuum to 150 psi.

Vibration

Moderate vibration resistance.

Material:

CA360 Brass (Body & Collet).

EP (Ethylene Propylene) - o-ring.

Used With:

SAE J844 Type A and B.

Temperature Range:

-40°F to +200°F (-40°C to +93°C)

Advantages:

Easy, fast assembly, onepiece fitting, reusable Field Serviceable (See collet repair kits, page 89).

Used With:

Danfoss Air Brake Tubing.

Conformance:

Meets D.O.T. FMVSS 571.106 and SAE J1131 air brake system performance requirements.

How to Order:

Order individually by catalog number (parts are standard with thread sealant).

Label Set:

FS-3300 (adhesive) CL-503 (non-adhesive)

Note:

Refer to current price list for availability of cataloged items. Quotations and delivery of non-stock items supplied on request. Configurations and dimensions subject to change without notice. Additional information can be found in SAE J2494.

Assembly Instructions:

See following page.

Cartridge Information Encapsulated:

For insertion into single bore cavity in substitution for pipe thread ports. Meets proposed SAE specifications for encapsulated press in style Air Brake connectors.

Note:

Encapsulated Cartridges are specifically designed for installation into a thermoplastic (Nylon/Glass filled Nylon/Acetal) or a soft metal (Aluminum/Brass) cavity. For cavity dimensions contact Danfoss Technical Support at 1-888-258-0222.

Four-Step Cartridge:

When you clean sheet a component design, the Four-Step Cartridge is an economical substitute for the encapsulated design. Special order only.

Select the design that is right for you. For applications where manifolds (manufactured from aluminum, plastic and brass) and air tanks (manufactured from steel and plastic composites) are used, contact Danfoss Technical Support at 1-888-258-0222 for quotes based on your specific requirements and volumes.

Quick>Connect Air Brake - Brass & Composite

Assembly

 Using a tube cutter, make a square cut edge (maximum 15° cutting angle allowed).

2. Insert tubing straight into connector until a solid stop is felt. The tubing grip and seal (on o-ring) is now accomplished.

3. Gently tug on tubing to ensure tubing is secure.

Disassembly

1. Check to be sure there isn't any air pressure.

2. Depress collet head using fingers or tube-release tool to release grip on tubing.

3. With the collet depressed, pull the tubing from the connector.

Note:

Use with Air Brake Tubing see page 31.

Encapsulated Cartridge

For design installation reference page 79 under Encapsulated heading.

1800T Collet Service Tool

The Collet Service Tool, made from sturdy plated steel, is designed to assist in field servicing O-Rings of Q-CAB fittings. Use the half moon radius section to pry up and remove the collet and use the movable piano wire to remove the O-Ring. Notches are used to mark the tubing with insertion depth in five tubing sizes.

1800TRK Tube Release Kit

The 1800TRK tube release kit is designed to ease the removal of tubing from Q-CAB connectors. The individual tools are manufactured of a sturdy

engineering plastic. All seven tube sizes currently offered in Q-CAB can be serviced with the five tools that make up the 1800TRK kit.

Collet Repair Kits

| Tube O.D. | Repair Kit Part # |
|--------------|----------------------|
| 5/32 | 1800Kx2.5 |
| 3/16 | 1800Kx3 |
| 1/4 | 1800Kx4 |
| 3/8 | 1800Kx6 |
| 1/2 | 1800Kx8 |
| 5/8 | 1800Kx10 |
| 3/4 | 1800Kx12 |

Consisting of a replacement collet and a replacement o-ring, the collet repair kits provide an

opportunity to repair damaged Q-CAB connectors.

Note:

For additional technical questions, contact Technical Support at 1-888-258-0222.

Refer to safety information regarding proper selection of tubing and tube connectors on page 3.

Typical Application:

Air brake systems except where temperatures exceed +200°F or where battery acid can drip on tubing.

7/16-24

Pressure:

Thread Size-B

Maximum operating pressure of 150 psi.

Vibration:

Fair resistance.

Temperature Range:

-40°F to +200°F (-40°C to +93°C)

Material:

CA360 Brass.

Used With:

Air Brake Tubing. See Page 33

Advantages:

Easy to assemble (no tube preparation or flaring required.) Built in tube support. May be used with copper tubing by replacing nut, sleeve and insert with long nut and spherical sleeve. Insert should be removed for copper tubing use. See page 96 for details.

Conformance:

17/32-24 11/16-20 13/16-18 1-18

Meets specifications and standards of SAE and DOT FMVSS 571.106.

How to Order:

For complete assemblies (body, nuts and sleeves), order by catalog number. Example: 1468x4x4. To order body only (less nut and sleeve), add prefix "B" to catalog number and change "14" to "13". Example: B1368x4x4. Nuts, sleeve and insert can be ordered separately by catalog number.

To order complete assembly with pipe sealant (Seal-A-Thread), add suffix "Z" to catalog number. Example: 1468x4x4Z (special order only).

To order complete assembly with gauge ring, add suffix "K" to catalog number. Example: 1468x4x4K (special order only).

Note:

Refer to current price list for availability of cataloged items. Quotations and delivery of non-stock items supplied on request. Configurations and dimensions subject to change without notice. Additional information can be found in SAE J246.

Assembly Instructions:

- 1. Cut tubing to desired length.
- Slide nut and then sleeve on tubing. Threaded end of nut "A" must face toward connector body.
- Insert tubing into the pre assembled fitting. Be sure tubing is bottomed in connector.
- Tighten nut to required torque as indicated on chart. Another check on proper assembly is dimension A also noted on chart. A gauge ring also assures installation to specification. See page 95.

| Tube Size | Torque | A Dimension |
|--------------|--------------------|----------------|
| 1/4 | 85 to 115 in. lbs. | .085/.105 |
| 3/8 | 12 to 17 ft. lbs. | .125/.145 |
| 1/2 | 25 to 33 ft. lbs. | .100/.120 |
| 5/8 | 26 to 35 ft. lbs. | .115/.135 |
| 3/4 | 38 to 50 ft. lbs. | .180/.200 |

Disassembly:

Remove nut and pull tubing out of connector body. Insert will remain in tubing.

Reassembly:

Push tubing and insert into connector body until it bottoms. Thread nut onto connector body and torque as in Step 4.

Label Set:

FS-900 (adhesive) CL-497 (non-adhesive)

Note:

Use with Air Brake Tubing see page 31.

Air Brake - Copper Tubing

Note:

For additional technical questions, contact Technical Support at 1-888-258-0222.

Refer to safety information regarding proper selection of tubing and tube connectors on page 3.

Typical Application:

Air brake systems.

Pressure:

Maximum operating pressure of 150 psi.

Vibration:

Fair resistance.

Temperature Range:

-65°F to +250°F (-53°C to +121°C) with copper tubing.

Material:

CA360 Brass.

Used With:

Copper tubing in air brake systems.

Advantages:

Easy to assemble (no flaring). May be used with nylon tubing by replacing long nut and spherical sleeve with insert, rigid sleeve and nut.

Conformance:

Meets specifications and standards of SAE and DOT.

How to Order:

For complete assemblies (body, nuts and sleeves), order by catalog number. Example: 1368x4. To order body only (less nut and sleeve), add prefix "B" to catalog number. Example: B1368x4. Nuts and sleeve can be ordered separately by catalog number.

To order complete assembly with pipe sealant (Seal-A-Thread), add suffix "Z" to catalog number. Example: 1368x4Z (special order only).

Note:

Refer to current price list for availability of cataloged items. Quotations and delivery of non-stock items supplied on request. Configurations and dimensions subject to change without notice. Additional information can be found in SAE J246.

Assembly Instructions:

- Cut tubing to desired length. Make sure all burrs are removed and the ends are cut square.
- Slide nut and then sleeve on tubing. Threaded end of nut "A" must face toward connector body.
- Insert tubing into connector. Be sure tubing is bottomed on fitting shoulder.
- 4. Thread nut onto connector body until it is hand tight.
- From that point, tighten with a wrench the number of turns indicated in the chart below.

| Tube Size | Additional Number Of Turns From Hand Tight |
|---------------|--------------------------------------------------|
| 1/4, 3/8 | 1-3/4 |
| 1/2, 5/8, 3/4 | 3-1/4 |

Label Set:

FS-800 (adhesive) CL-491 (non-adhesive)

| Thread Size-B | 5/16-24 | 3/8-24 | 7/16-24 | 1/2-20 | 9/16-20 |

Typical Application:

Oil, air, water and lubrication systems.

Pressure:

Operating pressure of 500 psi for 1/8" to 1/4" sizes, 250 psi for 5/16" and 3/8" sizes.

Vibration:

Fair resistance.

Temperature Range:

-65°F to +250°F (-53°C to +121°C) range at maximum operating pressures.

Material:

CA360 Brass.

Used With:

Aluminum and copper tubing. Not recommended for steel tubing.

Advantages:

Easy to assemble, no flaring. Two (2) piece construction.

Conformance:

Meets ASA and ASME specifications.

How to Order:

Order individually by catalog number.

Note:

Refer to current price list for availability of cataloged items. Quotations and delivery of non-stock items supplied on request. Configurations and dimensions subject to change without notice.

Assembly Instructions:

- 1. Cut tubing to desired length.
- Slide nut on end of tube. Threaded end "A" of nut must face toward connector.

Note:

Note:

For additional technical

questions, contact Technical

The lead end of nut incorporates the sleeve as a single piece.

- Insert tube into connector body. Be sure tube is bottomed on connector shoulder.
- 4. Lubricate threads and assemble nut to connector body.
- 5. From that point, tighten Tighten nut, hand tight. From hand tight, tighten with a wrench 1-1/2 additional turns to form proper seal.

[♦]MTO - Made To Order

Note:

For additional technical questions, contact Technical Support at 1-888-258-0222.

Typical Application:

Grease, refrigeration, instrumentation and hydraulic systems. Fuel, LP and natural gas available on special order.

Pressure:

Operating pressure up to 1200 psi.

Vibration:

Fair resistance.

Temperature Range:

-65°F to +250°F (-53°C to +121°C).

Material:

CA360 Brass.

Used With:

Brass, bronze and iron pipe.

Advantages:

Dryseal pipe threads (NPTF). Large range of sizes and configurations.

Conformance:

Listed by Underwriters Laboratories (available on special order) for fuel equipment, refrigeration and gas. Meets specifications and standards of ASA, ASME and SAE.

How to Order:

Order individually by catalog number. Example: 3325x4. To order with pipe sealant (Seal-A-Thread), add a "Z" suffix to the catalog number. (Special order only). Example: 3325x4Z.

Note:

Refer to current price list for availability of cataloged items. Quotations and delivery of non-stock items supplied on request. Configurations and dimensions subject to change without notice. Additional information can be found in SAE J530 Automotive Pipe Fittings and SAE J531 Drain Plugs.

Assembly Instructions:

- 1. Tighten approximately 2-1/2 turns past hand tight.
- Connectors with Seal-A-Thread tighten two turns past hand tight. Brittle materials require special cautions.

Label Set:

W-8022 (adhesive) CL-490 (non-adhesive)

Brass Products Needle Valves

Note:

For additional technical questions, contact Technical Support at 1-888-258-0222.

Refer to safety information regarding proper selection of tubing and tube connectors on page 5.

Typical Application:

Instrumentation, hydraulic and pneumatic systems.

Pressure:

150 psi maximum. (Does not include plastic tubing.)

Temperature Range:

-65°F to +250°F (-53°C to +121°C) with metal tubing. For valves using compatible tubing, refer to the tubing temperature range.

Material:

Brass bodies, steel handles except where noted. Polyline valves have brass bodies and brass handles.

Used With:

Copper, aluminum, steel and plastic tubing where applicable.

Advantages:

Metal-to-metal seat, with fine thread screw down, enables valves to seat positively, adjust easily and hold to any amount of flow up to capacity of the valve.

Conformance:

Designed for automotive and industrial use. Not intended for natural gas, LPG, nuclear or aircraft applications.

How to Order:

Order valve body, nuts and sleeves by catalog number. Order valve with Selfalign nuts and sleeves by adding suffix "S". Example: A6763 becomes A6763S. Order valves less nuts and sleeves by adding prefix "B". Example: A6763 becomes B6763.

Assembly Instructions:

Install with the pressure against the seat. Inspection of a straight valve discloses one opening to be higher than the other. Pressure should always be directed against the seat in angle valves, not the stem threads.

Brass Products Trucks Valves

Typical Application:

Used extensively in the trucking industry for cooling and fuel line applications.

Material:

Forged brass bodies, steel handles.

Pressure Range:

200 psi maximum.

Temperature:

-40°F to +250°F (-40°C to +121°C)

Conformance:

Designed for trucking use. Not intended for natural gas, LPG, nuclear or aircraft applications.

Note:

Buna-N o-ring sealed;

Brass Products Plastic Drain Cocks

Material:

Nylon 6 Fiber Reinforced.

Pressure Range:

Up to 25 psi.

Used With

Automotive Radiators:

Temperature:

-50°F to +180°F (-46°C to +82°C)

Conformance:

Designed for automotive use. Not intended for natural gas, LPG, nuclear or aircraft applications.

Brass Products

Ground Plug & Multiple Shut-Offs

Note:

For additional technical questions, contact Technical Support at 1-888-258-0222.

Refer to safety information regarding proper selection of tubing and tube connectors on page 5.

Pressure Range:

30 psi working pressure, except where noted.

Used With:

Copper, aluminum, steel and plastic tubing where applicable.

Material:

Brass bodies and handles.

Temperature:

-65°F to +250°F (-53°C to +121°C) with metal tubing. For use with plastic tubing, refer to the tubing temperature range.

Conformance:

Designed for automotive or industrial use. Not intended for natural gas, LPG, nuclear or aircraft applications, except as noted.

Ordering Information:

Order valve body, nut and sleeves by catalog number. Order valves with Selfalign nuts and sleeves by adding suffix "S". Example: A694S. Order valves less nut and sleeve by adding prefix "B". Example: B694.

Note:

Ground Plug Drains and Shut-Offs use a universal lubricant satisfactory for use with most common fluids. However the lubricant may wash out at higher pressures or with some exotic fluids.

Draincock

| Male Pipe Thread | Catalog Number | D | L | |

Features/Benefits

- Forged brass body
- · Blowout proof stem
- · Chrome plated ball
- Double o-ring stem seal never needs tightening
- Floating ball design
- Standard steel handle

Applications

- · Vacuum service
- · Industrial service
- · Machine/engine coolant
- Center off position
- Diverter valve

Service

- Working pressure: 500 psig bottom inlet@ 70°F; 100 psig side inlets
- Temperature range: -40°F + 300°F
- Orifice diameters:
 1/4" = .440",
 3/8" = .500",
 1/2" = .500"
- · Vacuum rating: Full
- For: Water, oils and gases

Note: Not steam rated.

Adapters can be used to adapt standard steel brake lines to the different size ports used in dual master cylinders. The tube O.D. is the outside diameter of the steel brake line. Thread

size can be determined by measuring with a U.S. or Metric screw pitch gauge. See pages 14 to 18.

Metric Hydraulic Brake Products How to Measure Metric Threads

Metric threads are measured and specified by the thread diameter in millimeters and the pitch in millimeters per thread. If dimension "A" is 22mm and dimension "B" (crest to crest distance) is 1.5mm, then the metric thread size is M22 x 1.5.

Molded Compression Tube Products

Sizes:

Available in sizes 1/8" through 3/4" tube OD (7/8" tube OD and metric tube sizes available on request from Technical Support

1-888-258-0222.

Materials:

Molded as standard in two materials: nvlon and polypropylene

Nylon characteristics:

- good resistance to organic solvents, oils, and gasoline
- excellent impact resistance
- tolerant to repeated steam for wash down and longtime weathering
- F.D.A. and N.S.F. listed
- operating temperatures -40°F to 200°F (-40°C to 93°C) not to exceed temperature specification of tubing

Polypropylene characteristics:

- · good chemical and corrosion resistance
- opaque
- 20% glass filled

• N.S.F. listed

• operating temperatures -30°F to 200°F (-34°C to 93°C) not to exceed temperature specification of tubing

Available on request in two materials: Celcon®* (acetal copolymer) or KYNAR*** (polyvinylidene fluoride)

Styles:

Available in two standard styles:

Ferrule Nut (integral nut and sleeve for soft tubing to 50 PSI♦)

• features ferrule and nut molded as a single part, eliminating the need for a two-piece assembly

Gripper Nut with separate plastic sleeve (for sure-grip with plastic tubing up to 220 PSI♦)

 for higher pressure applications

Features and Benefits:

- leak-free performance
- · high integrity in both mechanical and acoustical vibrations

- ten styles and over 400 part number configurations to meet your needs
- easy assembly no special tools or tube preparation necessary
- reliability in side-loaded applications allows for compact plumbing
- For use with PT200, PT240, and TP160 plastic tubing
- connectors come fully assembled – for your convenience
- very low resistance to media flow resulting from material and internal surfaces
- no metal parts to corrode or present a safety hazard with aggressive chemicals
- ISO 9001 Certified

Assembly Instructions

the particular application.

** KYNAR is a registered trademark

Danfoss connectors are regulated

by ambient and fluid temperatures, type of fluid being carried, tubing

type and conditions of mechanical

abuse. Pressures in excess of above specifications in all connector sizes

should be tested by the customer in

Operating temperatures of

of Elf Atochem North America, Inc.

of Ticona.

Maximum Operating Pressure:

Ferrule Nut series = 50 psi max

Gripper Nut series = 220 PSI max

Operating pressures of Danfoss molded compression products are regulated by ambient and fluid temperatures, type of

Ferrule nut with integral sleeve low pressure application soft plastic tubing

fluid being carried, tubing type and conditions of mechanical abuse. Pressures in excess of above specifications in all fitting sizes should be tested by the customer for their particular application.

Used with:

Plastic tubing: TP160, PT200,

Ferrule nut with plastic gripper for use with plastic tubing for sure grip

and PT240

Tube inserts are recommended for optimal performance with PT200 tubing.

Temperature Range:

Nylon = -40°F to +200°F (-40°C to +93°C)

Polypropylene = -30° F to +200°F (-34°C to +93°C)

Assembly Instructions Continued

Ranges are at maximum operating pressures (refer to tubing temperature range). The overlap of temperature ranges of the individual components will decide the actual temperature range of the assembly.

Assembly Instructions:

- Cut tubing to desired length; be sure the tube end is cut properly (maximum 10° cutting angle allowed).
- Insert the tubing through the back of the nut all the way through the nut assembly to the tube stop in the connector body (see illustration). If the tubing does not enter the nut easily, loosen the nut one turn and then insert the tubing all the way to the tube stop in the fitting body.
- Turn the nut to hand-tight.
- Tighten the nut an additional

- 2 to 2-1/2 turns past handtight or until the nut bottoms against the connector body, whichever comes first.
- All nuts must be retightened when the system reaches projected operating temperature.

Ordering Information

Molded compression connector are available in nylon and in polypropylene. They are also available by special order in KYNAR** (polyvinylidene fluoride) or Celcon* (acetal copolymer). To order fittings in KYNAR or Celcon, call Technical Support at 1-888-258-0222. Refer to Chemical Resistance Chart, pages 22-26. For detailed information on chemical compatibility, call Technical Support at 1-888-258-0222. General material characteristics are as follows:

Nylon, F.D.A. and N.S.F. listed, has good resistance to organic solvents, oils and gasoline. Good strength at high temperatures. Cold and hotwater applications. Longtime weathering resistance. Good impact resistance, both single and repeated. Not recommended for use with bleach, acids, or chlorine.

Polypropylene, N.S.F. listed, has good chemical resistance. Withstands continuous temperatures up to 215°F (not to exceed temperature specification of tubing).

Unaffected by most weak acids, alkalies, alcohols and ketones. Do not use with oxidants or strong acids or in continuous sunlight. 20% glass filled for improved stiffness.

KYNAR, an F.D.A. and N.S.F. listed polyvinylidene fluoride, has outstanding chemical resistance for handling highly corrosive fluids.

Celcon, an acetal copolymer, N.S.F. listed and U.S.D.A. and F.D.A. listed for coffee, milk and antibiotics, has high tensile strength and good impact resistance over a broad temperature range. Translucent white color. Not affected by continuous hot-water service and works smoothly with metal tubing. Celcon cannot be recommended for continuous exposure to solutions with a chlorine concentration greater than 1 ppm. Suggested maximum continuous-use temperature is 220°F in air and 180°F in water (not to exceed temperature specification of tubing). Unaffected by most inorganics, except sulfuric, nitric and hydrochloric acids. Should not be continuously exposed to sunlight.

Most connectors can be ordered with a GRIPPER style nut. Fittings with a GRIPPER style nut are capable of handling greater pressure than those with standard style nut.

For ordering connectors with 'GRIPPER' nut, add 'G' to the end of the part number (example: 1568x4x4G or 1568Px4x4G). Some connectors are NOT available with the GRIPPER style nut, while others are ONLY available with the GRIPPER style nut. For more information, call Technical Support at 1-888-258-0222.

Note:

It is not necessary to disassemble the connector for assembly. Merely insert tubing to stop and tighten compression nut.

^{*} Celcon is a registered trademark of Ticona.

^{**} KYNAR is a registered trademark of Elf Atochem North America, Inc.

Not available with GRIPPER style nutSold Only with GRIPPER style nut

To order with 'GRIPPER' nut, add 'G' to the end of the part # (Except where noted!) Example: 1568x4x4G or 1568Px4x4G

Related Products Cabinets & Assortments

C-40X – The sturdy C-40X cabinet contains 40 heavy-duty drawers that can be divided into two, three, or four compartments providing space for a large selection of hose ends and adapters. It has mounting holes for the T-420, ET1187, and ET1000 crimp machines. Dimensions: 46-1/2"H x 40"W; 26" Deep at base, 18" Deep at top. Weight: 228 lbs.

TC-20 - The TC-20 cabinet provides easy access to all your tooling needs. This collet cabinet fits Danfoss' core tooling products. Standard holes fit the ET425 series collets. Inserts are provided to fit the ET313 series collets. **Dimensions: 28-1/2"H x 26-1/2"W**; **12-3/4" Deep. Weight: 37.5 lbs.**

C-15X – The rugged C-15X contains 15 extra large drawers that may be divided into two or three sections for those large, difficult to store items. **Dimensions:** 13 -5/8"H x 30 -1/4"W; 14-3/8" Deep. Weight: 45 lbs.

HD-1X - The HD-1X cabinet offers the ideal solution for keeping 50-foot lengths of hose off the floor. Vertical slots in the cabinet keep hoses organized and clean. Consider bolting a C-15X stocking cabinet on top of the HD-1X to keep an inventory of hose ends readily available. Internal dimensions have changed from 7 narrow 4.3" sections to 5 wider 6.14" sections to accommodate larger hose sizes. **Dimensions: 36"H x 31" W; 24" Deep. Weight: 83 lbs.**

C-63X - This stock cabinet containing 63 drawers, which can be divided into two or three sections, is a nice addition to any store front. Dimensions: 25"H x 30 -1/4"W; 9-1/4" Deep. Weight: 61 lbs.

FC-16X - The FC-16X contains 16 clear poly drawers that can be divided into two or three sections. **Dimensions:** 11-3/4"H x 16-1/8"W; 9" Deep. Weight: 13 lbs.

C-632X - The C-632X consists of the CB-63X cabinet base, the C-15X cabinet, and two C-63X cabinets. This cabinet is a space saving, efficient addition to the modern store with a lobby type sales area. It requires a minimum amount of space, but does a maximum job merchandising a wide variety of products in 126 clear drawers. An additional 15 large, high impact drawers located in the bottom section provide ample space for large or heavy items. Dimensions: 68-1/2"H x 30"W; 15" Deep. Weight: 167 lbs.

FH-135X - The sturdy FH-135X cabinet contains 50 heavy-duty drawers that can be divided into one, two, or three compartments allowing ample space for a large selection of hose ends and adapters. It includes mounting holes for the ET1187 and ET1000 crimp machines.

Dimensions: 46-1/2"H x 33" W; 14-1/2" Deep. Weight: 115 lbs.

Glossary Alpha/Numeric

A:

abrasion: external damage to a hose assembly caused by its being rubbed on a foreign object; a wearing away by friction.

ABS: Air-Brake Swivel

absorption: regarding hose, the process of taking in fluid. Hose materials are often compared with regard to relative rates and total amounts of absorption as they pertain to specific fluids.

acid resistant: having the ability to withstand the action of identified acids within specified limits of concentration and temperature.

adapter, adaptor:

- 1. connectors of various sizes and materials used to change an end connector from one type to another type or one size to another. (i.e., a male SAE to male pipe adapter is often attached to a female SAE to create a male end union connector);
- 2. the grooved portion of a cam & groove coupling.

adhesion: the strength of bond between cured rubber surfaces or between a cured rubber surface and a non-rubber surface

adhesive: a material which, when applied, will cause two surfaces to adhere.

ambient/atmospheric conditions:

The surrounding conditions, such as temperature, pressure, and corrosion, to which a hose assembly is exposed.

anchor: a restraint applied to eliminate motion and restrain forces.

anodize, anodized: an electrolytic process used to deposit protective or cosmetic

deposit protective or cosmetic coatings in a variety of colors on metal, primarily used with aluminum.

ANSI: American National Standards Institute.

Application working pressure:

unique to customer's application. See pressure, working.

assembly: a general term referring to any hose coupled with end connectors of any style attached to one or both ends

ASTM: American Society for Testing and Materials.

axial movement: compression or elongation along the longitudinal axis.

B:

barb: the portion of a connector (coupling) that is inserted into the hose, usually comprised of two or more radial serrations or ridges designed to form a redundant seal between the hose and connector.

barbed and ferrule

connector: a two-piece hose connector comprised of a barbed insert (nipple), normally with peripheral ridges or backward-slanted barbs, for inserting into a hose and a ferrule, usually crimped or swaged.

bend radius: the radius of a bent section of hose measured to the innermost surface of the curved portion.

bend radius, minimum: the smallest radius at which hose or tubing can be used. For Metal Hose: the radius of a bend measured to the hose centerline, as recommended by the manufacturer.

bore:

- 1. an internal cylindrical passageway, as of a tube, hose or pipe;
- 2. the internal diameter of a tube, hose, or pipe.

braid: the woven portion of a hose used as reinforcement to increase pressure rating and add hoop strength. Various materials such as polyester, cotton or metal

wire are used. A hose may have one or more braids, outside or between layers of hose material. **braided ply:** a layer of braided reinforcement.

brand: a mark or symbol identifying or describing a product and/or manufacturer, that is embossed, inlaid or printed.

brass: a family of copper/zinc allovs.

brazing: a process of joining metals using a non-ferrous filler metal having a melting point that is lower than the "parent metals" to be joined, typically over +800°F.

bronze: an alloy of copper, tin and zinc.

BSPP/BSPT:

British Standard Pipe Parallel / British Standard Pipe Tapered. See Connector/Coupling - Pipe Thread Connectors.

C:

chalking: the formation of a powdery surface condition due to disintegration of surface binder or elastomer by weathering or other destructive environments.

chemical compatibility:

the relative degree to which a material may contact another without corrosion, degradation or adverse change of properties.

chemical resistance: the ability of a particular polymer, rubber compound, or metal to exhibit minimal physical and/or chemical property changes when in contact with one or more chemicals for a specified length of time, at specified concentrations, pressure, and temperature.

cold flexibility: relative ease of bending while being exposed to specified low temperature.

combustible liquid: a

combustible liquid is one having a flash point at or above +100°F (37.8°C).

compound: the mixture of rubber or plastic and other materials, which are combined to give the desired properties when, used in the manufacture of a product.

compression connector:

see connector/coupling - Compression

conductive: the ability to transfer electrical potential.

configuration: the combination of connectors on a particular assembly.

core: the inner portion of a hose, usually referring to the material in contact with the medium.

corrosion: the process of material degradation by chemical or electrochemical means

corrosion resistance: ability of metal components to resist oxidation.

coupling: a frequently used alternative term for hose end connector.

cover: the outer component usually intended to protect the carcass of a product.

CPE: chlorinated polyethylene, a rubber elastomer.

cracking: a sharp break or fissure in the surface, generally caused by strain and environmental conditions.

D:

date code: any combination of numbers, letters, symbols or other methods used by a manufacturer to identify the time of manufacture of a product.

deburr: to remove ragged edges from the inside diameter of a hose end.

design factor: a ratio used to establish the working pressure of the hose, based on the burst strength of the hose.

DOT: Department of Transportation.**DIN:** Deutsche Industrie Norme.

durometer: an instrument for measuring the hardness of rubber and plastic compounds.

E.

eccentricity: the condition resulting from the inside and outside diameters not having a common center.

Glossary Alpha/Numeric

effusion: the escape, usually of gases, through a material. See permeation.

elastic limit: the limiting extent to which a body may be deformed and yet return to its original shape after removal of the deforming force.

elastomer: any one of a group of polymeric materials, usually designated thermoset, such as natural rubber, or thermoplastic, which will soften with application of heat.

elongation: the increase in length expressed numerically as a percentage of the initial length.

endurance test: a service or laboratory test, conducted to product failure, usually under normal use conditions.

extrude/extruded/ extrusion: forced through the shaping die of an extruder; extrusion may have a solid or hollow cross section.

F:

fabricator: the producer of hose and tubing assemblies.

fatigue: the weakening or deterioration of a material occurring when a repetitious or continuous application of stress causes strain, which could lead to failure.

FDA: United States Food and Drug Administration.

connector/coupling: a device attached to the end of the hose to facilitate connection. The following is only a partial

list of types of connectors available:

Compression Connector-

a connector style that seals on a mating tube by compressing an internal ferrule against the tube O.D.

Field Attachable Connector

a connector designed to be attached to hose without crimping or swaging. This connector is not always a reusable type connector.

Inverted Flare Connector a connector consisting of a male or female nut, trapped on a tube by

flaring the end of the tube material to either 37° or 45°.

JIC Connectors - joint Industrial Council (no longer in existence). An engineering group that established an industry standard connector design incorporating a 37° mating surface, male and female styles. These standards are now governed by SAE.

O-ring Connectors - a connector that seals by means of an elastomeric ring of a specified material.

Pipe Thread Connectors -

NPT - National Pipe Taper.Pipe thread per ANSI B1.20.1

NPTF - National Pipe Tapered for Fuels. (Same as above except dry-seal per ANSI B1.20.3)

NPSH - National Pipe Straight Hose per ANSI B1.20.7

NPSM - National Pipe Straight Mechanical. Straight thread per ANSI B1.20.1

NPSL - National Pipe Straight Loose fit per ANSI B1.20.1

BSPP, BSPT - British Standard Pipe, Parallel, British Standard Pipe Taper. BS21

Quick Connect Connector - a connector designed to quickly connect and disconnect. These connectors come in many styles and types.

Tube Connector - a hose connector of which the mating end conforms to a tube diameter. The mate or male end of a compression connector.

Flammable gases/liquid/media:

a flammable gas, including liquefied gas, is one having a closed cup flash point below +100°F (+37.8°C) and a vapor pressure greater than 25 psi. (174.2 KPa).

flow rate: a volume of media being conveyed in a given time period.

fluid: a gas or liquid medium.

G:

GPM: gallons per minute.

H:

heat resistance: the property or ability to resist the deteriorating effects of elevated temperatures.

hose: a flexible conduit consisting of a tube, reinforcement, and usually an outer cover.

hydrostatic testing: the use of liquid pressure to test a hose or hose assembly for leakage, twisting, and/or hose change-in-length.

Hytrel: a DuPont registered trademark.

l:

I.D.: the abbreviation for inside diameter.

identification yarn: a yarn of single or multiple colors, usually embedded in the hose wall, used to identify the manufacturer.

ISO: International Organization for Standardization.

J:

JIC: see connector/coupling-JIC.

K:

kinking: a temporary or permanent distortion of the hose induced by bending beyond the minimum bend radius.

L:

layline: the line of printed information that runs parallel on the side of a manufactured hose giving details such as part number, PSI rating, hose size and manufacturing data.

layer: a single thickness of rubber or fabric between adjacent parts.

loop installation: the assembly is installed in a loop or "U" shape, and is most often used when frequent and/or large amounts of motion are involved.

LPG, LP Gas: the abbreviation for liquefied petroleum gas.

M:

MAWP: see pressure, maximum allowable working.

manufacturer's identification: a code symbol used on or in some hose to indicate the manufacturer.

media, medium: the substance(s) being conveyed through a system.

N:

NAHAD: the abbreviation for the National Association of Hose & Accessories Distributors.

Neoprene: a registered trademark of DuPont.

nipple: the internal member or portion of a hose connector.

nitrile rubber (NB/Buna-N): a family of acrylonitrile elastomers used extensively for industrial hose.

nominal: a size indicator for reference only.

nomograph: a chart used to compare hose size to flow rate to recommended velocity.

non-conductive: the inability to transfer an electrical charge.

NPT/NPTF: abbreviation for national pipe threads. See connector/coupling - Pipe Thread Connectors.

nylon: a family of polyamide materials.

0:

OAL: see overall length

O.D.: the abbreviation for outside diameter.

OE/OEM: original equipment manufacturer.

oil resistance: the ability of the materials to withstand exposure to oil.

oil swell: the change in volume of a rubber article resulting from contact with oil.

operating conditions: the pressure, temperature, motion, and environment to which a hose assembly is subjected.

overall length (OAL): the total length of a hose assembly,

Glossary Alpha/Numeric

which consists of the free hose length plus the length of the coupling(s).

oxidation: the reaction of oxygen on a material, usually evidenced by a change in the appearance or feel of the surface or by a change in physical properties.

ozone cracking: the surface cracks, checks or crazing caused by exposure to an atmosphere containing ozone.

ozone resistance: the ability to withstand the deteriorating effects of ozone (generally cracking).

P:

permanent connector: the type of connector which, once installed, may not be removed for re-use.

permeation: the process of migration of a substance into and through another, usually the movement of a gas into and through a hose material; the rate of permeation is specific to the substance, temperature, pressure and the material being permeated.

plating: a material, usually metal, applied to another metal by electroplating, for the purpose of reducing corrosion; typically a more noble metal such a zinc is applied to steel.

ply: an individual layer in hose construction.

polymer: a macromolecular material formed by the chemical combination of monomers, having either the same or different chemical compositions.

pressure: force ÷ unit area. For purposes of this document, refers to PSIG (pounds per square inch gauge).

pressure drop: the measure of pressure reduction or loss over a specific length of hose.

pressure, burst: the pressure at which rupture occurs.

pressure, working: the maximum pressure to which a hose will be subjected,

including the momentary surges in pressure, which can occur during service. Abbreviated as WP.

psi (PSI): pounds per square inch.

PTFE: polytetrafluoroethylene, a high molecular weight fluoroplastic polymer with carbon atoms shielded by fluorine atoms having very strong inter atomic bonds, giving it chemical inertness.

Push>Connect: (Push>Connect Metric, Push>Connect Flow Controls, Push>Connect Plus) A Reusable, easy to assemble connector recommended on compressed air, lubrication, and pneumatic instrumentation applications. Use with approved tubing material.

PVC: polyvinyl chloride. A low cost thermoplastic material typically used in the manufacture of industrial hoses. The operating temperature range is -500°F to +1750°F (-295.5°C to +954.4°C).

Quick>Connect: A reusable easy to assemble air brake connector used on NT100 series tubing. This connector meets D.O.T. performance requirements.

reinforcement: the strengthening members, consisting of either fabric, cord, and/or metal, of a hose. See ply.

reusable connector/coupling: see connector/coupling, Field Attachable Connectors.

SAE: Society of Automotive Engineers.

shank: that portion of a connector, which is inserted into the bore of a hose.

specification: a document setting forth pertinent details of a product.

spring guard: a helically wound component applied internally or externally to a hose assembly, used for strain relief,

abrasion resistance, collapse resistance.

standard: a document, or an object for physical comparison, for defining product characteristics, products, or processes, prepared by a consensus of a properly constituted group of those substantially affected and having the qualifications to prepare the standard for use.

stem: see nipple.

surge (spike): a rapid and transient rise in pressure.

swelling: an increase in volume or linear dimension of a specimen immersed in liquid or exposed to a vapor.

Teflon: a registered trademark of DuPont used under license by Danfoss. See PTFE, FEP and PFA.

tube: the innermost continuous all-rubber or plastic element of a hose.

tube connector: see connector/ coupling-Tube.

tubing: a non-reinforced, homogeneous conduit, generally of circular cross-section.

vacuum resistance: the measure of a hoses ability to resist negative gauge pressure.

vibration: amplitude motion occurring at a given frequency.

viscosity: the resistance of a material to flow.

weathering: the surface deterioration of a hose cover during outdoor exposure, as shown by checking, cracking, crazing and chalking.

working temperature: the temperature range of the application, may include the temperature of the fluid conveyed or the environmental conditions the assembly is exposed to in use.

WP: the abbreviation for working pressure.

The preceding Glossary of Terms, as utilized in the hose industry, includes some definitions from The Hose Handbook, published by the Rubber Manufacturers Association.
