

Flow Control Valves

FR1-16

Flow Control, Fixed, Pressure Compensated, Restrictive Type

210 bar [3000 psi] • 114 l/min [30 US gpm]

DESCRIPTION AND OPERATION

This is a fixed, restrictive type, pressure compensated flow control valve, where the flow from port 2 will remain constant regardless of the pressure difference across the valve. Flow enters at port 1 and passes across a fixed orifice in the spool, which creates a pressure drop. This causes the spool to move back against the spring, which then restricts the outlet flow.
