

Sequence and Unloading Valves

1DS100

Sequence Valve, Direct Acting, Spool Type, Internal Pilot, External Drain

350 bar [5000 psi] • 150 l/min [40 US gpm]

DESCRIPTION AND OPERATION

This is a direct acting, spool type sequence valve that opens from port 1 to port 2 when the setting is reached, which can be used to sequence operations in a system limiting pressure loss. Connecting port 3 to tank allows this valve to be used as a relief with a consistent setting in applications with high backpressure variation. This valve is ideal for sequencing a secondary operation, while maintaining pressure in the first or as a compensator in a load sense system.
