Solenoid Valve, 2-way, Poppet Type, Normally Closed, Pilot Operated, Double Blocking 350 bar [5000 psi] • 114 l/min [30 USgpm]

This is a 2-way, 2-position, poppet type, pilot operated, normally closed, bi-directional solenoid valve. In its de-energized condition flow is blocked in both directions. Leakage in either direction is kept to a minimum due to the poppet design. When energized, flow can take place from port 2 to 1 and from 1 to 2. These valves can be used to hold loads in position or interrupt a pressure line where flow is expected to pass in both directions in the de-energized condition.
