

Solenoid Valves

SBV12-8-C

Solenoid Valve, 2-way, Poppet Type, Normally Closed, Direct Acting, Double Blocking

350 bar [5000 psi] • 1 l/min [0.25 US gpm]

OPERATION AND DESCRIPTION

This is a 2-way, 2-position, poppet type, direct acting, normally closed, bi-directional solenoid valve for low flow applications. In its de-energized condition, flow is blocked in both directions. Leakage in either direction is kept to a minimum due to the poppet design. When energized, flow can take place from port 2 to 1 and from 1 to 2. These valves can be used to hold loads in position, provide controlled lowering, or as a pilot valve for larger valves such as ventable relief valves or logic elements.
