ESVL9-10-E

Proportional Directional Valve, 5-way, 3-position, Spool Type, Non-Compensated

250 bar [3600 psi] • 23 l/min [6 US gpm]

DESCRIPTION AND OPERATION

This is a 5-way, 3-position, spool type, non-compensated proportional directional valve. In its de-energized condition, all ports are blocked. Increasing the current to the bottom coil will cause the spool to move, proportionally opening flow from port 5 to 4 with return flow from port 2 to 3. Increasing the current to the top coil will proportionally open flow from port 5 to 2 with return flow from port 4 to 3. In both cases, port 5 will also be opened to port 1, which acts as the load sense port. Using this as a variable orifice in conjunction with a compensator, the valve will provide compensated flow to an actuator in both directions. For optimal performance, install with the solenoid valve below the tank oil level in the horizontal or inverted position, reducing the chance for trapped air in the valve.
