

Save time on planning and collecting documentation with Danfoss **Heat Selector**

3 min

is all it takes to
complete your
calculation

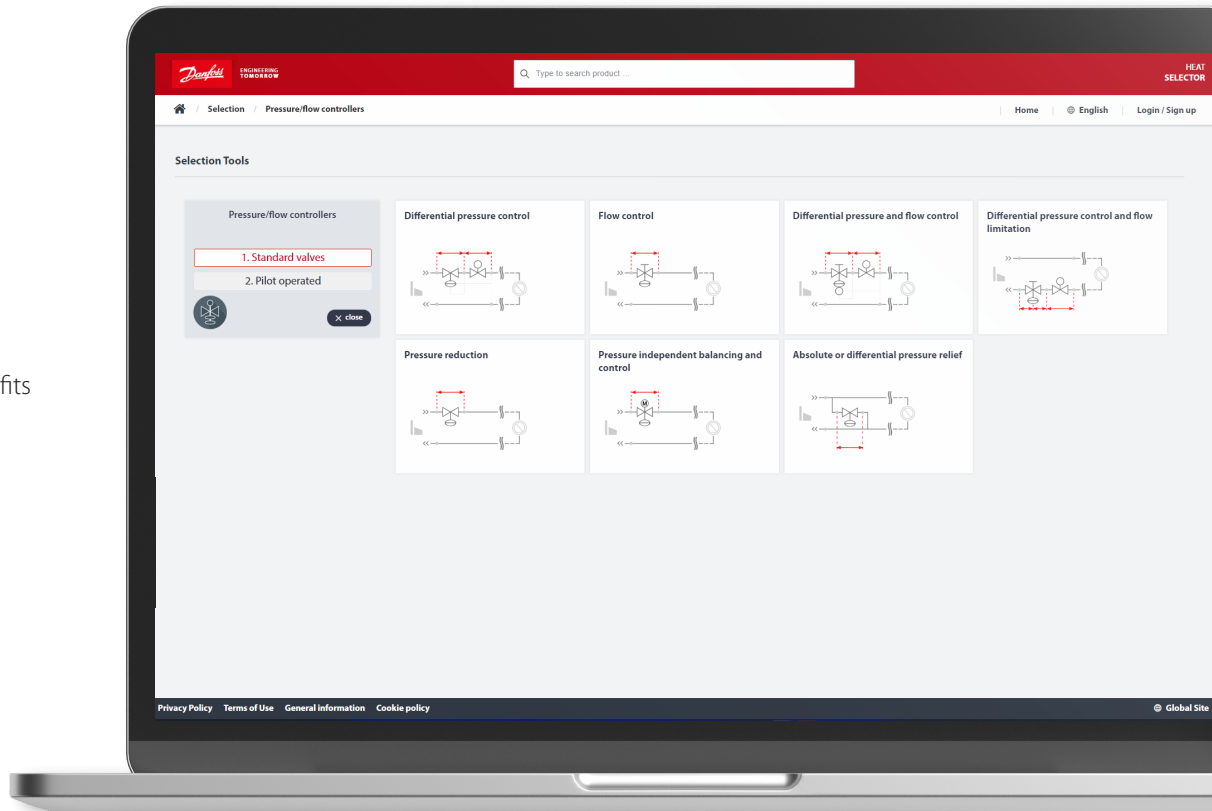

Heat Selector

Best-in-class online selection tool that optimizes planning process for heating application experts.

The Heat Selector saves time in calculation for product selection and guides you to the recommended product mix for the application at hand. At the same time, the Heat Selector provides you with easy access to all required documentation.

Application selection

Find and select the right application scheme that fits your application needs.

What's in it **for you?**

Make your own calculations on the spot

A user-friendly interface enables an intuitive usage without prior training

Get all the required documentation and product pricing at once

Find the best solution for your needs based only on the most recent versions of products

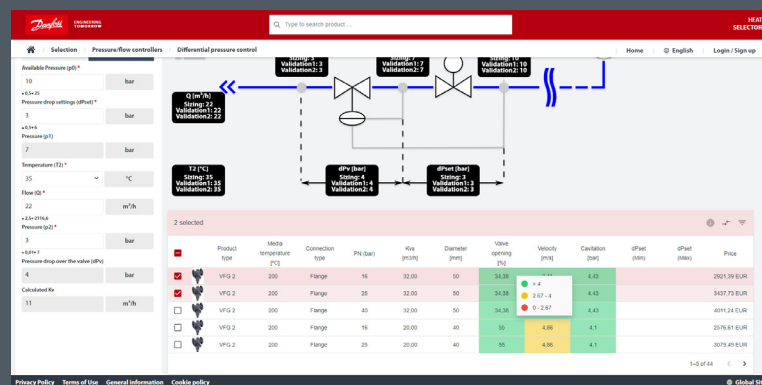

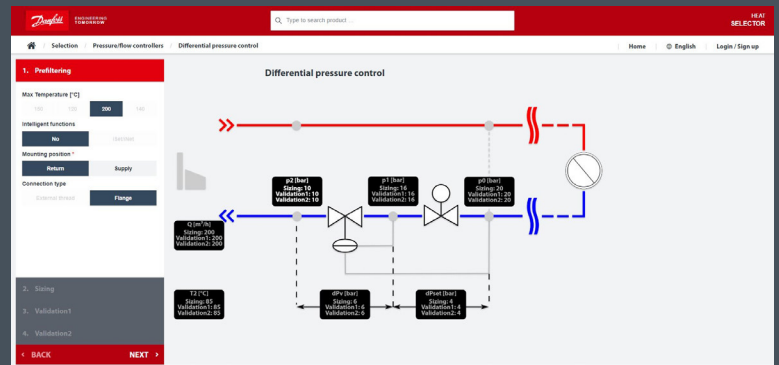

Store and reuse personalized projects and maintain your data

Simple, fast and easy to use

Easy calculation

Bullet proof data entry in just a few simple steps, including warnings if your data entries are not valid.

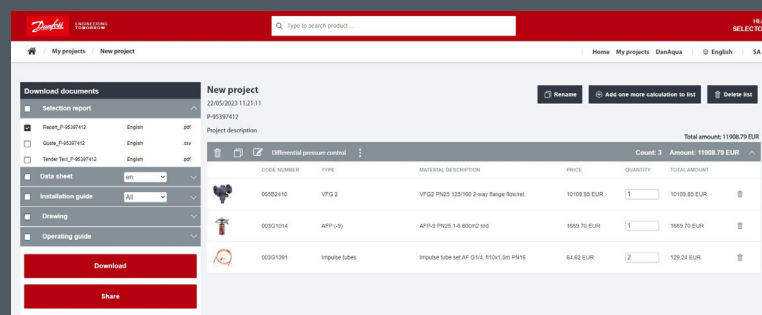

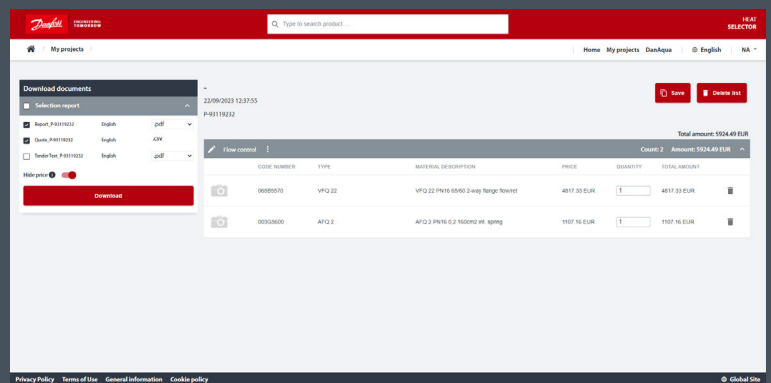

Product selection and comparison with recommendations criteria

Choose the right products based on the entered data and recommendation from Danfoss including matching accessories.

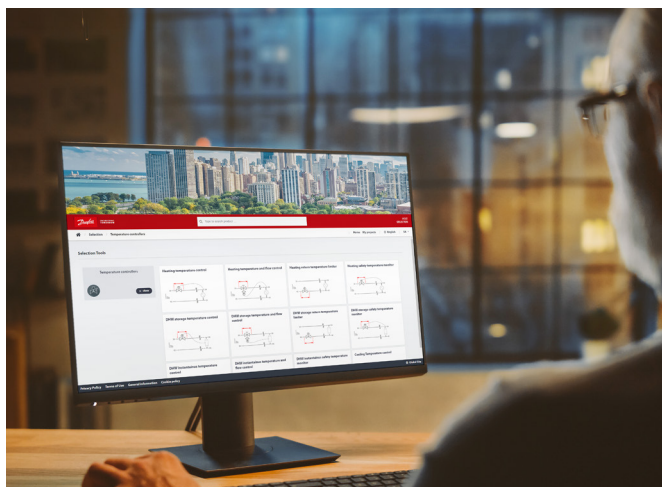

Projects saving and copying

Saving your multiple calculations and reports safely in 'My projects' folder including documentation with data sheets, instructions, declarations, tender texts, 2D and 3D drawings. Projects can also be easily copied for re-usability.

Documentation download and sharing

Print, download or share all needed documentation with different data interfaces related to your calculation.

Tool that gets updated **constantly**

The content of the Heat Selector is constantly updated with latest product prices, additional products, new applications, new advanced features and new calculation options such as simultaneous calculation of multiple products, selection of complete stations with adjacent products and download of reports in different formats.

You will get automatic access to updated information and functionality every time you log into the Heat Selector.

Application selection

Find and select the right application scheme that fits your application needs.

Easy calculation

Bullet proof data entry in just a few simple steps, including warnings if your data entries are not valid.

Product comparison and selection

Compare and choose the right products for the application including matching accessories.

Report saving

Save all your calculations and reports safely in 'My lists' - including documentation with datasheets, instructions, declarations, tender texts, 2D and 3D drawings.
