Danfoss Position Statement on Packaging and Packaging Waste Directive in the EU

Danfoss supports the objective of the Packaging and Packaging Waste Directive (94/62/EC and amendments) and complies with the requirements in the Directive. Through our contractual agreements with our suppliers, we require that none of the packaging material contains lead, cadmium, mercury or hexavalent chromium in concentrations exceeding the threshold limit values stated in the directive. We are in dialogue with our suppliers to ensure that they are aware of the Packaging and Packaging Waste Directive and understand the requirements listed here and set out in the Danfoss Negative List.

Danfoss product packaging is optimized to:

- Minimize use of packaging material
- Optimize protection from transport damage by determining minimum amount of packaging material for critical stacking height according to ASTM D642

Essential requirements listed in the Directive and related standards (EN 13427-32) are observed when developing packaging material for our products.

Further we have signed up with collective schemes in EU member states where we place products on the market and report packaging volumes as required by the transposed Directive in each member state.

All Danfoss manufacturing facilities are required to be ISO 14001 certified, and compliance to national and international environmental legislation is part of third-party certification procedures.

We trust that the above will satisfy your inquiry into Danfoss' compliance with the Packaging and Packaging Waste Directive. In case you have any comments or questions please contact your Sales representative.
