Danfoss Position on UK REACH

Under the European Union (Withdrawal) Act 2018, the EU REACH (Registration, Evaluation, Authorization and restriction of Chemicals, 1907/2006/EC) Regulation was brought into UK law and is now known as UK REACH – the key principles of EU REACH are retained in UK REACH, however the EU REACH and UK REACH operate independently from each other.

Danfoss supports the objective of UK REACH to provide a high level of protection of human health and the environment from the use of chemicals.

Danfoss is not a manufacturer of chemicals and does not manufacture articles with intended release of substances. However, Danfoss will inform our customers in case of presence of substances in our products more than the limit allowed on the UK REACH [Candidate List](#).

Danfoss has set up a process to ensure REACH compliance. Responsibilities and appropriate resources have been assigned to enable us to comply with the Candidate List, Authorization List, Restriction List, and other REACH provisions in relation to our products. Danfoss' REACH organization will make all reasonable efforts to ensure appropriate and timely handling of updates hereto.

The UK REACH regulation does not require that Danfoss provides analysis data for our products. We will, however, where relevant, on a case-by-case basis consider appropriate testing and reporting of analyses subject to agreement with respective customers or authorities.

All Danfoss manufacturing facilities are required to be ISO 14001 certified, and compliance to national and international environmental legislation is part of third-party certification procedures.

We trust that the above will satisfy your inquiry into Danfoss' compliance with UK REACH.

In case you have any comments or questions please contact your sales representative.
