**User Guide** 

# **Electronic Refrigeration Controller** ERC 112

This user guide is intended to be used by OEMs for the purpose of programming ERC 112. It may also be useful for technicians. However, it is not intended as a user guide for end users.

www.danfoss.com/erc

## Introduction

Application

Advantages

Temperature control for refrigeration appliances. Front panel mounting.

The latest generation CPU, plenty of memory and high-end electronic components allow for a uniquely versatile software. Three separate password-protected user levels can be used to control more than 300 different parameters to fit all individual requirements.

Approvals

R290/R600a end-use applications employing in accordance to EN/IEC 60335-2-24, annex CC and EN/IEC 60335-2-89, annex BB; Glow wire according to EN/IEC 60335-1; IEC/EN 60730 UL60730 NSF CQC EAC Ukraine

#### **Password protected**

The access level can be set separately for each parameter using KoolProg KoolProg Software. There are three levels of access 1, 2, 3: - level 1 is for shop access;

- level 2 for technicians;
- level 3 for OEMs.

The access levels cannot be set using the buttons. Passwords for the different levels can however be altered for the level of access you have, e.g. a level 2 user can change the password for level 1 and level 2 but not level 3.

# **Typical application**

Glass Door Merchandiser No-frost freezer/sub-zero cooler

# Danfoss

# **Product overview**

Display

**Buttons** 

The ERC 112 is an electronic refrigeration controller with an LED display especially developed for bottle coolers and commercial fridges and freezers. It is particularly suited for OEM customers where time, easy and reliable installation and high quality need to go hand in hand with flexibility.

The display can be ordered in red or blue. The controller is available with the upper left button as "*ECO*" or "*Defrost*". The lower left-button can be supplied with

"Light", "Stand by" or "Super chill".

Clips

Are used to secure the controller in place in the case of rear mounting. They are not used with front mounting. There are two identical clips, one placed on either side of the controller.

## **Front frame**

Controller without front frame

The front frame provides a proper finish but can also be used to secure the controller in place when using front mounting. In this case, clamps are not required. Contact Danfoss for details.

## "S1"

Temperature sensor for cabinet

#### "S2"

Temperature sensor for defrost

## "S3"

Temperature sensor for condenser, light sensor or Motion sensor

#### "S4"

Temperature sensor Pt 1000 ohm/0°C or door signal

## "**di**" Door sig

Door signal or Motion sensor

**Control temperature sensor** There are different lengths.

# Defrost temperature sensor

Should be mounted on the evaporator.

#### **Condenser temperature sensor** Should be mounted on the condenser.

## Light sensor

Is optional and is used to measure the level of ambient light around the cabinet so that night and day "*Economy*", "*Normal*" modes of operation can automatically be set, as well as the brightness of the display.

## **Motion sensor**

Should be mounted on the cabinet front.

#### Door sensor connector cable

Is optional and is a connector and cable with spade terminals compatible with door contacts used in refrigeration applications.

The function of an input can be reprogrammed, but the connector can not be moved. The connector is designed to only one location. "S1" to "S1", "S2" to "S2", etc.

# **Quick programming**

Software for PC

# KoolProg

Easy **parameter setting** and **programming** of your product

KoolKey (EKA200)

#### KoolProg

Software from Danfoss for programming the ERC-controller via a PC rather than with the front panel buttons.

https://www.danfoss.com/en/service-andsupport/downloads/dcs/koolprog/

## KoolKey (EKA 200)

KoolKey is a smart device that acts as a Gateway to connect ERC controller to PC software"KoolProg" as well as a Programming key for fast programming.

Refer to the <u>KoolKey installation guide</u> for detailed instructions.

#### KoolKey as a Gateway

KoolKey in Gateway mode connects the ERC controller to PC to work online with PC software "KoolProg".

**KoolKey as a Programming key** is used for transferring parameter settings files from the KoolKey to the controller and vice versa (bidirectional setting file transfer)

#### Mass Programming Key (EKA 201)

Mass Programming Key is a simple programming key for programming the controller in production assembly line. This is write only device and requires KoolProg software to load the setting file in to the device.

Refer to the <u>EKA 201 installation guide</u> for detailed instructions.

Mass programming Key (EKA 201)

# **Technical specs**

Power Supply	100 - 240 V AC Switch mode p	ower supply. Average 0.7 W		
Purpose of control	To control commercial Refrigeration Applications			
Construction of Control	Electronic control for incorporation for use in Class I and Class II appliance			
Automatic Action	Micro- disconnection on operation type 1.B			
	5 inputs: 4 analogue (digital), 1 d	digital; user specific assignmen	t; Optional: External bu	tton input
Input	Cabinet air/Evaporator/Conder	nser	Door sensor: all type	es, user specific
	• Light sensor: Danfoss ECO light	t sensor	Motion sensor	
		UL60730		EN60730

	"DO5"	FLA2/LRA12, TV-1		8 A resistive, 2(2) A
	"DO6"	FLA2/LRA12, TV-1		8 A resistive, 2(2) A
				Max 10 A total "DO4-6"
Probes	Danfoss NTC sensors and Danfo Danfoss Pt 1000 ohm/0°C	ss ECO accessories (Light, Moti	on and Door sensors)	
Connectors	Modular connector system for C Input connector type: Rast2 5 Ec			
Programming	Programming with Danfoss Koo	IProg PC software, Docking sta	tion and Programming	key
Assembly	Front mounting; Brackets			
Display	LED display, 3 digit, decimal point and multi functionality icons; °C/°F scale			
Keypad	4 buttons (integrated IP65 design), 2 left, 2 right; user programmable			
Operating Conditions	0 – +55 °C, 93% RH, non-condensing			
Storage Conditions	-40 - +85 °C, 93% RH			
Range of Measurement	-40 – +85 °C with standard sense	ors (-40 – +200 °C when using N	NTC 100K sensors)	
Protection	Front: IP65 Rear: water and dust protection of	corresponds to IP31, accessibility	of connectors limit rear	part rating to IP00
Environmental	Pollution degree II, non-conden	ising		
Resistance to heat & fire	Category D (UL94-V0)			
EMC category	Category I			
Over Voltage Category	Category II (IEC 60664-1)			
Temperature for Ball Pres- sure Test	According to EN 60730-1, Annex G			
For SELV Circuits	Input Probes or Digital Input connected to SELV limited energy >15W			
Operating Cycles	Compressor relay: more than 175,000 at full load (16A (16A))			
Approvals	R290/R600a end-use application EN/IEC 60335-2-24, annex CC an Glow wire according to EN/IEC 6 IEC/EN 60730 UL60730 NSF CQC EAC Ukraine	d EN/IEC 60335-2-89, annex BB		nly valid when used with recommended Danfoss

The inputs are not galvanic isolated and are connected directly to the mains supply!

For that reason, door-switches, sensors as well as the cables must fulfil the reinforced insulation requirements.

## Dimensions

(Lock with frame)

Rear mounting (Lock with clips)

## Connections

(Inputs and outputs are configurable)

**Note** 54 Port can also be used to connect other sensors and Door sensor.

antos

## Operation

Programming	Tools
-------------	-------

The controller can be configured in four ways: Using:

• Buttons on the front panel of the controller.

KoolProg and KoolKey as Gateway

KoolKey with Docking station

KoolKey as Copy key

All these tools are supplied separately. For technical literature and further information, please contact your local Danfoss representative.

Manual operation with buttons (Direct Access)

**1 Press:** variable direct function, e.g. *"ECO"/"Night mode"* **Sub function:** back

**1 Press:** variable direct function, e.g. light

Sub function: "OK"

**1 Press:** temperature set point **Sub function:** "*up*"

1 Press: temperature set point Sub function: "down"

Examples

#### Changing the Desired Temperature Set point:

The display shows the current temperature.
 Press "up/down" to access set point.
 Press "up/down" to adjust set point.
 After 30 seconds, the display automatically reverts to showing the current temperature

#### Turning ON/OFF the ECO Function:

1. Press "ECO". The green "ECO" symbol is lit when in "ECO" mode.

#### Turn ON/Off the Light:

1. Press the "*Light*" button.

## Acknowledging Alarms:

- 1. Display Flashing the alarm message.
- 2. Press any button to acknowledge.

#### **Password protection:**

1. Press "^" and "v" together and hold 5 seconds to access the menu.

- 2. The display shows "PAS" (only if configured for
- password protection).
- 3. Press "*OK*".
- 4. Press " $^{\prime\prime}$ /"v" to the code.
- 5. Press "*OK*".
- Password protection on three levels:
- 1. Level 1: "shop" (daily use by shop personnel).
- 2. Level 2: "ser" (service technician).
- 3. Level 3: "OEM" (OEM programming).

#### **Changing a Parameter**

Some parameters may be hidden to you. Your access level will determine which parameters you can view and edit:

1. Press " $\wedge$ " and "v" together and hold 5 seconds to access the menu.

- 2. First parameter group is shown "*tHE*".
- 3. Press "^" and "v" to find the desired group.
- 4. Press "OK".
- 5. First parameter is shown.
- 6. Press "^" and "v" to find the desired
- parameter.

#### 7. Press "OK".

8. Press "^" and "v" to find the desired setting. 9. Press "*OK*".

After 30 seconds, the display automatically reverts to showing the current temperature. Or Press 2 x "*Back*".

#### Info Menu:

The Info Menu feature provides the user with key information about the controller, allowing them to quickly access critical data points. Here are the informations that can be viewed through the Info Menu button (based on the button configuration on page 21):

Highest Cab Air Temperature: Displays the highest cab air temperature since the last power on.

Lowest Cab Air Temperature: Displays the lowest cab air temperature since the last power on.

Average Cab Air Temperature: Displays the average cab air temperature since the last power on.

Active Alarms: Displays any active alarms currently being triggered in the system.

#### **Resetting Temperature Values:**

You can reset the highest, lowest, and average temperature values by pressing the Info Menu button for 5 seconds after entering the menu. This will clear the data collected since the last power on and start fresh.

#### Note:

Incorrect parameter settings can lead to inadequate cooling, excessive energy consumption, unnecessary alarms and in the case of temperature-sensitive food storage, breaches in food hygiene principles and regulations.

Only a trained operator should make changes to parameters.

# **Menu/functions**

ERC	menu code	Description
"tHE		Thermostat settings
	<b>"SEt"</b> Min100.0°C Max. 200.0°C Default 2.0°C	Set point This parameter defines desired temperature to be maintained in the cabinet or storage area. The set point can be locked to a range within "HSE" and "LSE" settings. The set point can be changed quickly by simply pressing the "temperature up/down" buttons.
	<b>"SPr"</b> Min. 0.0 Max. 1.0 Default 0.5	Current set point adjustment value diF * SPr         The default value is set to 0.5 and the parameter is hidden by default.         "Spr" defines the position of the set point in relation to cut-in and cut-out.         "Spr=0,5" sets the set point mid between cut-in and cut-out.         "Spr=0" sets the set point at the cutout. "Spr=1" sets the set point at cut-in.
	<b>"diF"</b> Min. 0.0 K Max. 20.0 K Default 2.0 K	Thermostat differential         This defines the difference between the cut-out and the cut-in.         The desired temperature is determined by "SPr" and "diF".         DIF = 2
	<b>"HSE"</b> Min100.0°C Max. 200.0°C Default 50.0°C	Upper limit of thermostat set point       Image: Cut-out = 4 DEGREES         Define the temperature range limit of the controller.       Cut-out = 4 DEGREES         Once set, the desired temperatue (set point) can not go above "HSE" or below "LSE".       Cut-out = 4 DEGREES
	<b>"LSE"</b> Min100.0°C Max. 200°C Default -35.0°C	<b>Lower limit of thermostat set point</b> Define the temperature range limit of the controller. Once set, the desired temperatue (set point) can not go below " <i>LSE</i> ".
	<b>"iCi"</b> Min. no Max. yes Default no	Initial cut in         Comp relay action when Tair is between cut-in and cut-out at power-up:         "yES": cut in the compressor.         "no": cut out the compressor.
	<b>"SP2"</b> Min25 K Max. 25 K Default 0	Seasonal offset temperature (This parameter is only available from Product version PV03 onwards. Please check product laber for Product version of your controller.) Offset value for set point and alarms when the seasonal offset button is activated. It is an additional offset mode to have separate set points during summer and winter season, which can be activated by long press button after configuring in assignments as "tEc".
	"dF2"       Seasonal differential         Temperature differential during seasonal offset mode. Only applicable during normal operation.         Min. 0 K Max. 20 K Default 2	
FAn		Fan settings
	<b>"FCt"</b> Default FAo	Fan control method         "FAo": fan always on         "SEt": fan follow compressor by manual settings. (FoC and FSC needs to be set accordingly)         "Aut": automatical fan control
	<b>"Fod"</b> Min. 0 s Max. 240 s Default 0 s <b>"FSd"</b>	Fan ON Delay/Fod         Fod defines the fan delay (in seconds) after a compressor cut-in.         Fan Stop Delay/FSd         "FSd" defines the fan delay after a compressor cut-out.
	Min. 0 s Max. 240 s Default 0 s	If both "Fod" and "FSd" are set to zero then the fan runs whenever the compressor runs.
	<b>"FoC"</b> Min. 0 s Max. 960 s Default 0 s	Fan ON Cycle/FoC     FSd       Fan Stop Cycle/FSC     When the compressor is OFF, and "FoC" or "FSC" are not zero, the fan runs in cycles according to "FoC" and "FSC".
	<b>"FSC"</b> Min. 0 s Max. 960 s Default 0 s	Example: "FoC=120" [sec] and "FSC=120" [sec] means that the fan runs for half the time when the compressor is OFF. When the compressor is on, the fan is always ON (according to "FAO" and "Fod").

1		
	"FSt"	Fan Minimum Stop time Minimum stop time for fan protection.
	Min. 0 s	
	Max. 960 s Default 10 s	
	"FdC"	Fan ∆t cut in
	Min10.0 K	(This parameter is only applicable with Automatic fan control "Aut" mode.)
	Max. 10.0 K	Delta T for fan to cut in which the temperature offset comparing with thermostat cut in temperature.
	Default 0.0 K	
	Fai	<b>Fan stop time on door open</b> The delay with wich the fan will be stopped after the door has been opened.
	Min. 0 s Max. 999 s	"0": fan stop immediately when door open.
	Default 0 s	"1-998": delay for fan stop after door open.
		"999": fan keep running all the time during door open.
	"FLt"	Fan limit temperature         This function prevents the evaporator fan to operate if the temperature is
	Min. 0°C Max. 50°C	above the fan limit temperature
	Default 50	If the defrost sensor registers a higher temperature than the one set here, the fan will be stopped to avoid the warm air circulation in the cabinet This
		parameter is active only when evaporator sensor is connected.
	"FdF"	Fan limit Delta temperature
	Min 11	This is the evaporator delta temperature for the fan to switch ON after it is
	Min. 1 K Max. 10 K	switched off due to FLt setting.
	Default 2	
Lig		Light settings
	"CLC"	Cabinet Light Control
	Min. on	This parameter can be set to one of these alternatives to control the light in the cabinet:
	Max. dor Default on	"on": always ON.
		" <i>oFF</i> ": always OFF.
		"dor": door sensor only.
	"Lod"	<b>Light OFF delay</b> Number of seconds the light will stay ON after the door has been closed.
	Min. 0 s Max. 300 s	Number of seconds the light will stay on after the door has been closed.
	Default 0 s

Pull Down Defrost Interval This is the time between defrost cycles during pull down. It is measured in hours and can be up to 48 hours. During pull down, this setting overrides the defrost interval and defrost time settings (see the defrost section).
	Min40.0°C Max. 50.0°C Default 50.0°C "PCy" Min. 0 min Max. 360 min Default 30 min "Pdi" Min. 0 hour Max. 48 hour Default 15 hour	Pull down (sometimes known as Super Cool) is a procedure for improving cooling performance, accelerating the time used to reach the desired temperature. Pull down settings overrule all other settings. Pull Down Initiate Temperature This parameter indicates the temperature which causes a pull down to start. If the temperature measured inside the cabinet exceeds this value for longer than one hour, then pull down will start. The compressor will have already cut-in, so the only effect is to stop defrost cycles until the desired temperature is reached. The period of one hour is fixed and cannot be altered. Pull Down Cycling This is the duration in minutes of the compressor cycling at the reduced set point temperature. Once the desired pull down limit temperature "PLt" has been reached during pull down, the compressor will continue to cycle ON/OFF for the duration of "PCy". At the end of the period defined by "PCy", the set point temperature will return to normal and pull down will cease. Pull Down Defrost Interval This is the time between defrost cycles during pull down. It is measured in hours and can be up to 48 hours. During pull down, this setting overrides the defrost interval and defrost time settings (see the defrost section). Pull Down Duration

	"PLt"	Pull Down Limit Temperature This parameter sets the minimum allowed temperature during pull-down.
	Min55.0°C Max. 55.0°C Default 0.0°C	In order to protect valuable contents you must always specify the absolute minimum temperature allowed in your application. For glass door merchandisers 0°C/32°F protects bottles from freezing; for commercial fridges you may opt for a slightly higher temperature (e.g. 2°C)
	<b>"Prt"</b> Min. 0.0 K Max. 10.0 K Default 0.1 K	<b>Pull Down Reduction Temperature <math>\Delta t</math></b> The controller calculates a lower set point during pull down mode to increase the cooling capacity of your appliance. For each hour the cabinet temperature is above the pull down initiate temperature, the set point is reduced with the value of " <i>Prt</i> ".
dEF		Defrost settings
	<b>"dFt"</b> Default no	Defrost Type         "no": defrost function is disabled.         "EL": electrical defrost.         "Hgd": hot gas defrost (contact Danfoss for details).         "nat": OFF-cycle defrost (natural defrost).
	<b>"Add"</b> Min. no Max. yes Default no	Adaptive defrost "no": defrost controlled by time. "yES": automatic defrost control activated.
	<b>"dtt"</b> Min. 0.0°C Max. 25.0°C Default 6.0°C	<b>Terminate Temperature</b> This parameter defines at what temperature the defrost cycle will stop. The temperature is given by the evaporator sensor or by the cabinet temperature sensor if no evaporator sensor is used.
	<b>"drt"</b> Min. 0.0°C Max. 200.0°C Default 5.0°C	<b>Defrost reset temperature</b> The defrost counter is saved and restored at power-up, but if the temperature sensor, used for defrost, is higher than this value at power-up, it is assumed that the evaporator is free of ice and the defrost counter will be cleared.
	<b>"dii"</b> Min. 1 hour Max. 96 hour Default 6 hour	Defrost minimum Interval/dii Defines the minimum time period between the start of two defrost cycles. This parameter is applicable only in Adaptive defrost mode. Once the minimum interval has expired, controller will monitor the evaporator temperature and it will start the defrost if evapo- rator temperature goes below "dEt" or "ddt" value. If not, it will trigger the defrost once the maximum interval "dAi" has been reached. In case of time based defrost it always trigger the defrost at Maximum interval"dAi".
	"dAi"	Maximum Interval
	Min. 1 hour Max. 96 hour Default 7 hour	Defines the maximum time period between the start of two defrost cycles.
	<b>"dit"</b> Min. 0 min Max. 240 min Default 5 min	<b>Minimum Time</b> Defines the minimum duration of a defrost cycle. During this period, the controller will not check the temperature. Once the minimum time has expired, the temperature will be checked and if the terminate temperature " <i>dtt</i> " has been reached, the defrost cycle will end. If dtt has not been reached, defrost will continue until either dtt is reached or the maximum time " <i>dAt</i> " reached, whichever occurs first.
	<b>"dAt"</b> Min. 0 min Max. 480 min Default 30 min	Maximum Time Defines the maximum duration of a defrost cycle. The controller will not allow a maximum time to be entered which is less than the minimum time, or a minimum time which is more than the maximum time.
	<b>"dot"</b> Min. 0 min Max. 60 min	<b>Drip OFF Time</b> This parameter can be set to between 0 and 60 minutes and defines how long the delay is between the heater being switched OFF and the compressor starting again.
	Default 0 min "Fdd" Min. 0 s Max. 600 s Default 0 s	Fan Delay after Defrost Defines how long the delay is between the start of the compressor after defrost and the fan starting again.
	<b>"Ftd"</b> Min25.0°C Max. 25.0°C Default 25.0°C	<b>Fan Start Temperature</b> This only applies if an evaporator temperature sensor is fitted. This parameter determines at what evaporator temperature the fan will start after a defrost cycle is complete. If the time set in " <i>Fdd</i> " occurs before the temperature set in " <i>Ftd</i> ", the fan will start in line with " <i>Fdd</i> ". If the temperature set in " <i>Ftd</i> " occurs first, then the fan will start in line with " <i>Ftd</i> ". It is therefore a case of whichever parameter's setting is reached first which determines when the fan starts.

	"dFA"	Defrost Fan On Set to "VES" the fan will constantly run during defrect sucles
	Min. no Max. yes Default no	Set to " <i>yES</i> ", the fan will constantly run during defrost cycles. Set to " <i>no</i> ", the fan will not run during defrost cycles.
	"dCt"	<b>Defrost by accumulated compressor run time</b> If Yes: Defrost time based on actual accumulated compressor ON time"doC"
	Min. no Max. yes Default no	If Yes: Defrost time based on actual accumulated compressor ON time doc
	"doC"	Defrost by continuous compressor ON time
	Min. 0 hour Max. 24 hour Default 0 hour	Continuous compressor running can cause defrost. "0" = deactived
	<b>"dEt"</b> Min50.0°C Max. 0.0°C Default -50.0°C	<b>Defrost start evaporator temp</b> Defrost will get triggered at this temperature after expiry of minimum defrost interval "dii" (adaptive defrost only).
	<b>"ddt"</b> Min. 0.0 K Max. 30.0 K Default 5.0 K	<b>Defrost</b> $\Delta t$ Defrost $\Delta t$ compare with evaporator temperature of first cut out after defrost to trigger defrost start. The defrost start if evaporator temperature has decreased more the "ddt"
	<b>"idi"</b> Min. 0 hour Max. 96 hour Default 3 hour	<b>Initial Defrost Interval</b> The initial defrost interval determines the time for first defrost after power-up. The initial defrost is mainly intended for factory testing of the defrost functionality and can be set to expire after a number compressor cycles according to the setting of parameter idd. During normal operation, the defrost counter will be saved in memory and restored after power loss, making the initial defrost unnecessary.
	<b>"idd"</b> Min. 0 Max. 999 Default 100	Initial Defrost Duration The initial defrost duration is the number of compressor cycles before the initial defrost is deactivated. "0": "idi" No initial defrost. "1-998": number of compressor cycles before deactivation. "999": initial defrost always active.
СоР		Compressor settings
	<b>"uPt"</b> Min. no Max. yes Default no	<b>Voltage protection</b> " <i>no</i> ": no voltage protection. " <i>yES</i> ": voltage protection activated based on voltage related settings.
	"uLi"	Minimum cut-in voltage/uLi. Minimum cut-out voltage/uLo.
	Min. 0 V AC Max. 270 V AC Default 0 V	Maximum voltage/uHi These three parameters provide voltage protection to the compressor. Start by setting " <i>uHi</i> ", followed by " <i>uLo</i> " and " <i>uLi</i> ".
	<b>"uLo"</b> Min. 0 V AC Max. 270 V AC Default 0 V	"uLi": when the compressor is due to start, the voltage of the power supply will be checked and the compressor will only be allowed to start if it is at least the value given in this parameter.       uHi
	"uHi"	OFF if the voltage goes below that given in this parameter.
	Min. 0 V AC Max. 270 V AC Default 270 V	"uHi": when the compressor is running, it will be switched       \Sum         OFF if the voltage exceeds that given in this parameter.       If the compressor is already stopped, it will remain         switched OFF.       Sum
	<b>"EHd"</b> Default no	Sensor Error Type "no": no sensor error handling. "SEt": in case of control sensor error, follow error run/stop time.
	<b>"Ert"</b> Min. 0 min Max. 60 min Default 0 min	Error Run Time         The parameter only become active in the unlikely event of a broken         temperature sensor. It is used to run the application in safety mode.         At the same time the sensor error will be shown in the display.         "Ert" define the duration the compressor will run.         Example: "Ert=4" [min] and "ESt=16" [min] will provide an average cooling         system activity of 20%. Ert and "ESt" values are based on OEM experience         and are by default inactive.

	"ESt"	Error Stop Time
	Min. 0 min	The parameter only become active in the unlikely event of a broken
	Max. 60 min Default 1 min	temperature sensor. It is used to run the application in safety mode. At the same time the sensor error will be shown in the display.
	Delauit I min	"ESt" define the duration the compressor will be " <i>idle</i> ".
	"CSt"	Minimum Stop Time
	Min. 0 min	It determines the minimum number of minutes the compressor must
	Max. 30 min Default 2 min	remain idle before a Temperature cut-in can take effect. For example,
	Delaurez min	if the temperature sensor indicates that the cut-in temperature has been reached, but the number of minutes set in this parameter have not elapsed
		since the compressor last stopped, then the compressor will stay OFF.
		It will only start once the duration given by "CSt" has been reached
		provided the temperature is still high enough. "CSt" thus overrides the cut-in.
	"Crt"	Minimum Run Time It determines the minimum number of minutes the compressor must run
	Min. 0 min Max. 30 min	before a Temperature cut-out can take effect. For example, if the
	Default 0 min	temperature sensor indicated that the cut-out temperature has been
		reached, but the number of minutes set in this parameter have not
		elapsed since the compressor last started, then the compressor will continue. It will only stop once the duration given by "Crt" has been
		reached – provided the temperature is still low enough.
		"Crt" thus overrides the cut-out.
	"Cot"	Maximum OFF Time
	Min. 0 min Max. 480 min	This is the maximum time in minutes the compressor is allowed to " <i>idle</i> " – up to 480 minutes. Cot is set to zero by default (inactive).
	Default 0 min	If the controller is used on a draft beer (ice bank) application, this
		parameter can be used to control the ice thickness.
	"Cdd"	Compressor Door Open Delay/Cdd
	Min. 0 min	This parameter sets the delay in minutes before the compressor stops when the door is opened. If set to zero, the function is disabled.
	Max. 15 min Default 0 min	
	"Srt"	System resume after door open
	Min. 0 min Max. 60 min	Fan and Compressor resume after cut out by door open.
	Default 0 min	
	"Pod"	Power ON Delay
	Min. 0 s	This is the delay in seconds between power-on and the compressor being
	Max. 300 s Default 300 s	activated. Depends on the power ON temperature setting as explained below.
	"Pot"	Power ON Temperature
	Min100.0 °C	This parameter is used to accelerate the first application test on the
	Max. 200.0 °C	OEM assembly line; if the cabinet temperature is higher than this
	Default -100.0 °C	parameter the power ON Delay is overruled and the outputs are activated without delay.
	"Scd"	Second Compressor delay <sup>1)</sup>
	Min. 0 sec	This parameter defines the time delay to start the second compressor in dual compressor application, This parameter is active only
	Max. 960 sec Default 10 sec	when the second compressor is configured to one of the auxiliary relays under assignment "ASI" menu group (o2C or o3C or o4C) <sup>1)</sup> This parameter applicable only for dual compressor code 080G3471.
Con		Condenser Protection settings
		NOTE: A condensor temperature sensor is required to use these parameters.
		Condenser protection is generally used in dusty environments where
		the condenser may accumulate a layer of dust or dirt and therefore be
		at risk of overheating.
	"CAL"	Condenser Alarm Limit/CAL This parameter sets the temperature for the condenser at which an alarm
	Min. 0°C Max. 200°C	will be generated.
	Default 80°C	CAL
		CoL
		BASE TEMPERATURE
	"CbL"	Condenser Block Limit/CbL
	Min. 0°C	This parameter sets the temperature which if reached will cause the
	Max. 200°C Default 85°C	compressor to switch OFF.
L		

	<b>"CoL"</b> Min. 0°C Max. 200°C Default 60°C	Condenser OK Limit/CoL This parameter sets the temperature at which the compressor is allowed to start again after the temperature set in "CbL" above has been exceeded and the compressor stopped.
	<b>"CLL"</b> Min100°C Max. 20°C Default -5°C	Condenser Low Limit/CLL This parameter sets the lowest (condenser) temperature at which the compressor is allowed to start.
diS		Display settings
		NOTE: some display parameters can be set in such as way that they may be illegal in some jurisdictions. Please check local legislation.
	" <b>diC</b> " Min. no Max. yes Default no	<b>Display intensity auto control</b> " <i>no</i> ": display intensity use fixed value.
	<b>"din"</b> Min. 2 Max. 10 Default 10	Display Intensity         The controller can have its display intensity (brightness) set in one of         two ways:         A) With a Danfoss ambient light sensor attached, the brightness of the         display is adjusted automatically according to the ambient light level         (see the assignments section).         B) When no ambient light sensor is attached, the display intensity can         be set to a fixed intensity.         Both options are on a scale of 1 to 10, where 10 is the brightest.
	<b>"CFu"</b> Min. °C Max. °F Default °C	Display Unit This parameter sets the display to Fahrenheit or Celsius. Switching from one to the other will cause all temperature settings to be automatically updated accordingly.
	<b>"trS"</b> Default SCo	Temp sensor to display         "SCo": temperature control.         "EuA": evaporator temperture.         "Con": condenser temperature (condenser cleaning).         "AuS": only for showing on display.
	<b>"rES"</b> Min. 0.1 Max. 1 Default 0.1	Display Resolution         This parameter can be set to 0.1, 0.5 or 1 and affects the way the         temperature is displayed. With the parameter set to 1, the display will         only ever show temperatures rounded to the nearest whole degree.         At 0.5, it will round the temperature to the nearest half degree for display.         For example, 3.3 degrees will be shown in the display as 3.5 degrees         and 3.9 as 4.0. With the parameter set to 0.1, no rounding occurs.         This parameter does not affect the temperature itself, merely the display.
	<b>"rLt"</b> Min. no Max. yes Default no	<b>Display Range Limit</b> In some point of sales applications you may want to show the desired instead of the real temperature. This parameter sets whether the displayed temperature is the actual temperature or whether it is restricted to the cut-in / cut-out limits. Set to " <i>nO</i> " means that the actual temperature will de displayed. The parameter is set to " <i>nO</i> " by default.
	<b>"ddL"</b> Min. 0 min. Max. 10 min Default 0 min	Display DelayDISPLAY DELAYIn order to provide a realistic temperature appearance for an application, a display delay can be set.DISPLAY DELAYThe parameter sets the time constant $\tau$ (tau) of the moving average filter for the display. $66\%$
	<b>"doF"</b> Min10.0 K Max. 10.0 K Default 0.0 K	<b>Display Offset</b> This parameter is a relative value and allows the temperature displayed to be different to the temperature measured. For instance, at a measured temperature of 7°C and " <i>doF</i> " set to -2K, the displayed temperature will be 5°C instead.

	<b>"dLt"</b> Min. 0 min Max. 60 min Default 15 min	Lock Time After Defrost In order not to show a rising temperature during defrosting, the displayed temperature is locked at the temperature shown at the start of the defrost cycle for the number of minutes set in this parameter. "0": no lock.
	<b>"SEC"</b> Min. no Max. yes Default no	<b>Show Economy State</b> If set to " <i>yES</i> ", this parameter causes the display to show ECO when the system is in ECO mode. If set to " <i>nO</i> ", the temperature continues to be displayed.
	<b>"SSC"</b> Min. no Max. yes Default no	<b>Show Pull down state</b> If set to " <i>yES</i> ", this parameter causes the display to show SC when the system is in pull down mode. If set to " <i>nO</i> ", the temperature continues to be displayed.
	<b>"SHo"</b> Min. no Max. yes Default no	<b>Show Holiday</b> " <i>no</i> ": display will show temperature or ECO mode during holiday mode. " <i>yES</i> ": display will show " <i>HoL</i> " during holiday mode.
	<b>"SdF"</b> Min. no Max. yes Default yes	Show Defrost If set to " <i>yES</i> ", this parameter causes the display to show DEF when the system is in defrost mode. If set to " <i>nO</i> ", the temperature continues to be displayed.
	<b>"SCS"</b> Min. no Max. yes Default yes	<b>Show compressor symbol</b> " <i>no</i> ": compressor symbol will not show on display. " <i>yES</i> ": show compressor symbol on display.
	<b>"SFS"</b> Min. no Max. yes Default yes	Show Fan symbol " <i>no</i> ": san symbol will not show on display. " <i>yES</i> ": show fan symbol on display.
	<b>"SdS"</b> Min. no Max. yes Default yes	Show Defrost symbol "no": defrost symbol will not show on display. "yES": show defrost symbol on display.
	<b>"SES"</b> Min. no Max. yes Default yes	Show ECO symbol " <i>no</i> ": ECO symbol will not show on display. " <i>yES</i> ": show ECO symbol on display.
	<b>"Ld"</b> Min100.0°C Max. 200.0°C Default -100	Minimum Display value If the probe value is less than minimum display value mentioned in this para- meter, it doesn't show the actual value and instead show this minimum only until the probe starts reading a higher value than minimum display value set here.
	" <b>Hd</b> " Min100.0°C Max. 200.0°C Default 200	<ul> <li>Maximum display value</li> <li>Controller will display actual temperature, if the probe value is between Maximum display value and Signaling threshold value and the trend of the probe is increasing (trend is based on past 10 readings)</li> <li>Controller will display Error "Err", if the probe value is more than Signaling threshold value and the trend of the probe is increasing (based on the past 10 readings)</li> <li>Controller will display ""if the probe value is more than signaling thres- hold and trend of the probe is decreasing (based on the past 10 readings)</li> <li>Controller will display ""if the probe value is bigger than Max display va- lue and the trend of the probe is decreasing (based on the past 10 readings)</li> </ul>
	<b>"St"</b> Min100.0°C Max. 200.0°C Default 200	Signalling threshold value Temperature limit for Maximum display visualization
ALA		Alarm settings
	<b>"HAt"</b> Min100.0°C Max. 200°C Default 15.0°C	High Temp Alarm         Absolute value.         By setting "HAt" to the maximum alarms will be deactivated.

	11/ 441	
	"LAt"	Low Temp Alarm Absolute value.
	Min100.0°C Max. 200°C Default -50.0°C	By setting "LAt" to the minimum value, alarms will be deactivated. In most situations, the low alarm delay will be set to 0 to warn about too low a temperature immediately.
	"Htd"	Alarm delay on high temperature alarm
	Min. 0 min Max. 240 min Default 30 min	The number of minutes to wait before sounding an alarm once the high temperature alarm temperature is reached.
	<b>"Ltd"</b> Min. 0 min Max. 240 min Default 0 min	Alarm delay on low temperature alarm The number of minutes to wait before sounding an alarm once the low temperature alarm temperature is reached.
	<b>"Pdd"</b> Min. 0 min Max. 960 min Default 240 min	Pull down delay         Normally, it is not necessary or desirable to sound an alarm during a pull         down (the initial phase of reaching the desired temperature). This         parameter prevents the high temperature alarm "HAt" sounding during pull down         and after a defrost for the number of minutes set for the parameter.         NOTE: it does not apply to the low temperature alarm "LAt".
	<b>"dod"</b> Min. 0 min Max. 60 min Default 2 min	Door Open delay It is possible to indicate to customers that a door has accidentally been left open. This parameter sets the delay in minutes before the alarm sounds. This is useful in environments where customers/users may hold the door open while making their selection. If the door is closed again before the set number of minutes is reached, the alarm does not sound. NOTE: a door sensor is required if this parameter is to be activated.
	<b>"UAL"</b> Min. no Max. yes Default no	Voltage alarm " <i>no</i> ": no voltage alarm. " <i>yES</i> ": voltage alarm activated.
	<b>"LEA"</b> Min. 0 hour Max. 96 hour Default 0 hour	<b>Leakage alarm</b> Leakage detection for compressor protection. If compressor operates for more than the set time, an alarm will be triggered. "0": disable
	<b>"Abd"</b> Min. 0 min Max. 999 min Default 0 min	Alarm Buzzer Duration The alarm sounds for 10 seconds, followed by silence for 50 seconds. One alarm sequence therefore lasts 60 seconds. These values cannot be changed. This parameter determines how long in minutes an audible alarm will continue while there is still a reason to have an alarm. If set to 999, the alarm will continue to sound until the reason for the alarm is cleared – for example the temperature has dropped enough or the door closed. In some cases, it may be necessary for a user or technician to take action in order to clear the alarm. If set to 0, the alarm will never sound.
	"ACA" Min. no Max. yes Default yes	Auto Clear of Alarm/Error/ACA If this parameter is set to " <i>nO</i> ": The alarm status will not disappear automatically even if the condition which caused the alarm is no longer valid or present. If set to " <i>yES</i> ": As soon as the condition which caused the alarm is no longer valid or present, the alarm status will automatically change back to inactive. There will be no trace of the alarm having occurred. In general, glass door merchandise applications will be set to " <i>yES</i> " and commercial fridges and freezers set to " <i>nO</i> ". For example, if the temperature goes too high for a period there may be food safety considerations in a freezer containing food but not in a fridge with cold drinks.
AHC		Automatic Heater settings
		<ul> <li>Automatic Heater Control applies reverse cooling mode (heating) to your refrigeration appliance where the ambient temperature can go below the set point.</li> <li>A) It will use the Defrost output to control the heating function when needed. Defrost operations will operate as normal.</li> <li>B) Automatic heater will only operate when using Electric Defrost. It is disabled with Natural Defrost or Hot Gas Defrost.</li> </ul>

	<b>"AuH"</b> Min. no Max. yes Default no	Automatic Heater Mode Enable This setting is normally set to " <i>no</i> ". When set to " <i>yES</i> ", parameters " <i>End</i> ", "AHS" and "AHD" apply.						
	"End"Energy Mode DelayMin. 0 min Max. 360 min Default 60 minThis is the delay in minutes between the heater and the compressor operation. The heater is not allowed to start until this number of minutes has expired after the compressor has cut out and vice versa.							
	<b>"AHS"</b> Min100.0 °C Max. 200.0 °C Default 2.0°C	Auto Heat set point Set point of auto heating.						
	Image: Selective of the selection of the							
ECS		ECO strategy						
		NOTE: some of these parameters require the installation of the Danfoss Ambient Light Sensor. The Danfoss USB Gateway in combination with " <i>KoolProg Software</i> " allows for real time measurement of the current light intensity. Danfoss recommends testing and adjusting " <i>SLd</i> " and " <i>SLn</i> " values according to customers' specific needs.						
	<b>"ECo"</b> Min. no Max. yes Default Yes	ECO ON/OFF ECO active or not. If no all other settings are not active.						
	<b>"EdA"</b> Min. 1 Max. 10 Default 1	Door Actions Times of door action to trigger exiting ECO						
	<b>"EPA"</b> Min. 1 Max. 10 Default 1	<b>Pir Actions</b> Times of " <i>PIR</i> " action to trigger exiting ECO						
	<b>"ECt"</b> Min. 0 min Max. 180 min Default 30 min	Action counter time It is the duration of time for which the controller will check for number of times of Door action or activity through PIR sensor (mentioned in "EDA" and "EPA" parameters) to exit the ECO mode.						
	<b>"Edd"</b> Min. 0 min Max. 180 min Default 180 min	<b>Door delay</b> Door delay after door close to trigger entering ECO						
	<b>"EPd"</b> Min. 0 min Max. 180 min Default 120 min	<b>Pir delay</b> " <i>PIR</i> " delay to trigger entering ECO						
	"SLd" Min. 0 Max. 80 Default 5	Shop Light Day/SLd Shop Light Night/SLn These parameters are set as the percentage of the maximum light and determine when the device moves into or out of ECO mode for power-saving purposes. Requires Light Sensor. "SLd" is the amount of ambient light which will cause the device to						
	<b>"SLn"</b> Min. 0 Max. 80 Default 3	<ul> <li>move to normal/serving mode from ECO mode         <ul> <li>(normally occurs in the morning).</li> <li>"SLn" is the amount of ambient light which will cause the device to             move to ECO mode from normal/serving mode             (normally occurs in the evening).</li> </ul> </li> </ul>						
"tto"       Time to pull down         Min. 0 hour       Time that ERC must stay in ECO to go into Pulldown upon exiting ECO. E.g: If tto = 2, if the ERC stays in ECO for 2 o         Win. 0 hour       Will go into Pulldown after exiting ECO. If it stays in ECO for less than 2 hours, it will go to Serving Mode upon exit         Default 0 hour       Will go into Pulldown after exiting ECO. If it stays in ECO for less than 2 hours, it will go to Serving Mode upon exit								
"LSd"       Light Source delay on ECO         Min. 0 min       Max. 180 min         Default 0 min       Default 0 min								

	"Euu"							
	Euu	EWU active on/OFF Enable or disable early wake up.						
	Min. no							
	Max. yes Default yes							
	"CLH"	Shop close hour						
		Shop is assumed to be closed when staying in ECO mode longer than shop close hour.						
	Min. 0 hour Max. 24 hour							
	Default 6 hour							
	"ErL"	Early wake up time offset						
		Time of exiting ECO mode for next day=						
	Min. 0 min Max. 240 min							
	Default 120 min							
	"HoL"	Holiday Length						
	Min. 0 hour	If controller stays for longer than HoL in ECO and no activity is detected, the controller will go into Holiday Mode. Early Wake Up						
	Max. 999 hour	is disabled.						
	Default 72 hour							
ECA		ECO management						
	"Eto"	Eco Temperature Offset						
	Min25,0 K	This parameter gives a relative temperature in degrees. It is the difference in temperature for ECO mode operation compared to						
	Max. 25.0 K	normal mode.						
	Default 4.0 K	NOTE: setting a temperature offset may be illegal in some jurisdictions.						
	"Hto"	Holiday Temperature Offset						
	Min25.0 K	Increase or decrease of temperature with respect to normal mode during holiday mode.						
	Max. 25.0 K Default 6.0 K	during holday mode.						
	"diE"	ECO Differential Thermostat differential for ECO.						
	Min. 0.0 K							
	Max. 10.0 K Default 2.0 K							
	"FoE"	ECO Fan on cycle						
		On time for fan during compressor OFF period in ECO mode.						
	Min. 0 s Max. 960 s							
	Default 0 s							
	"FSE"	ECO Fan stop cycle						
		OFF time for fan during compressor OFF period in ECO mode.						
	Min. 0 s Max. 960 s							
	Default 0 s							
	"ELC"	ECO Cabinet light control						
	Dofaulter	"on": always ON (Button is default to control light for all these options).						
	Default on	" <i>oFF</i> ": always OFF. " <i>dor</i> ": door sensor only.						
	"ELd"	Eco Light Delay						
	Min. 0 min	This parameter causes a delay to the switch from normal to ECO mode when the shop lights are switched ON or OFF. The ambient light sensor						
	Max. 10 min Default 5 min	detects the change in light level and causes a switch mode. With this						
		parameter set to zero, the switch OFF mode occurs immediately.						
		If not set to zero (max: 10 minutes), then the change will be delayed by						
	the number of minutes set.							
ASi		Assignments settings						
	"uSA"	MODBUS Safety						
		"no": MODBUS auto detection is enable and serial communication is available for configuration KoolProg Software.						
	Min. no Max. yes	"yES": MODBUS communication is deactivated.						

"t1A"	Air Temperature Adjustment (applies to non-Danfoss temperature sensors only)
Min20.0 K Max. 20.0 K	This parameter is a relative value and allows adjustment of the control
Default 0.0 K	sensor temperature.
"t2A"	For instance, at a measured temperature of 7*C and " <i>tAd</i> " set to -2 K, the input from the control sensor will be 5*C instead.
"t3A"	
 "t4A"	
	Inputs and outputs are configurable
	There are two steps: 1.Define the type of sensor attached to the input:
	- temperature: light/digital.
	2. Define the application for the sensor:
	- temperature: control/condenser/evaporator.
	- light: ECO/display/both. - motion
	- digital: door sensor.
	Please contact your local Danfoss representative for information about
	default settings.
	NOTE: coded sensors will impact on the number of possible
	configurations.
	For instance: Danfoss supplies only 2-pole defrost sensors, so input "S3"
	will most likely be used as a defrost/evaporator temperature sensor input.
"S1C"	S1 Config/S1C
Default Stn	S2 Config/S2C
"S2C"	S3 Config/S3C S4 Config/S4C
	Available options are:
 Default Stn	'Stn": for a standard temperature sensor NTC 5 K @ 25°C and TPE precision.
"S3C"	" <i>Htn</i> ": for a high temperature sensor NTC 100 K @ 25°C. " <i>Pt1</i> ": for a temperature sensor Pt1000 ohm @ 0°C (only "S4").
Default Stn	<i>"Ldr</i> ": for a light sensor (values given in Luminens).
"S4C"	"dig": for a digital sensor with simple ON/OFF indication
Default Stn	(motion, magnet, switch, buttom).
 "S1A"	S1 Application/S1A
Default CC-	S2 Application/S2A
Default SCo	S3 Application/S3A
 1100 611	S4 Application/S4A Available options are:
"S2A"	"nC": not connected.
Default nC	"SCo": temperature control.
"S3A"	- "EuA": evaporator temperature.
	" <i>Con</i> ": condenser temperature (Condenser cleaning). " <i>AuS</i> ": only for showing temperature on display.
Default nC	" <i>Ldr</i> ": light sensor, Luminens.
"S4A"	"ECo": external input to control ECO mode.
Def. It f	"doc": door contact, contact closed when door closed.
Default nC	" <i>doo</i> ": door contact, contact open when door closed. " <i>Pir</i> ": motion sensor (only "S3").
	<i>"bt5</i> ": button 5 (only "54").
"diC"	DI Config
	This is the digital input used for a digital sensor or bus communications.
Default non	"non": not used.
	"doc": door contact, contact closed when door closed.
	" <i>doo</i> ": door contact, contact open when door closed. " <i>ECo</i> ": external input to control ECO mode.
	"Pir": motion sensor. Passive infrared.

Ser		Service information settings							
		The parameters in the following section are READ ONLY and cannot be							
		changed by the user. They provide information for technicians and OEM users.							
		They provide information for technicians and OLM users.							
		<b>NOTE</b> : the only parameters that can be configured are: " <i>oEL</i> ", " <i>oEn</i> ", " <i>oEH</i> ". These parameters allow OEMs to enter their own product code.							
	"ACt"	Accumulated Comp. run time							
	"AFt"	Accumulated Fan run time							
	"ALt"	Accumulated Light run time							
	"AEt"	Accumulated ERC up time							
	"Sdi"	DI physcial DI pin state (ON; OFF).							
	"uAC"	Voltage value Current main power supply voltage.							
	"ouS"	<b>Dos Status</b> Current relay open closed status.         "////" = all relay ON (Upper bar for on, Lower bar for OFF).         "///" = DO1 ON, DO2 OFF, DO3 & DO4 NA (no bar if relay not mounted).         "///!" = all relay OFF (Upper bar for on, Lower bar for OFF).							
	"rL1"	Relay 1 counter Thousands of cycles of compressor relay since manufacture.							
	"rL2"	Relay 2 counter         Thousands of cycles of no. 2 relay since manufacture.							
	"rL3"	Relay 3 counter         Thousands of cycles of no. 3 relay since manufacture.							
	"rL4"	Relay 4 counter Thousands of cycles of no. 4 relay since manufacture.							
	"int"	Interval Counter Compressor run time since last defrost.							
	"dnt"	Defrost time counter Duration of last defrost cycle [min].							
	"ont"	<b>Door open counter</b> " <i>ont/100</i> "=number of door openings since last reset.							
	"Snu"	Serial number Serial number given at manufacturing.							
	"Fir"	SW version Danfoss software version number.							
	"HAr"	HW version Danfoss hardware version number.							
	"onL"	OrderNoLow Danfoss order code number.							
	"onH"	OrderNoHigh Danfoss order code number.							
	"oEL"	OEM code Low							
	"oEn"	OEM code Middle							
	"oEH"	OEM code High							
"PAr"     Parameter version       OEM parameter version number [requires EKA copy key update].									
	"CHd"	Manufacturing date Programme date WWY: week number and year number (2010-19).							

"SFC"	Set as Default Resets all parameters to last good OEM settings.							
"Ctt"	Condenser Temp Temperature of the condensor sensor.							
"Et1"	Evaporator1 Temp Temperature of the evaporator sensor1.							
"Et2"	Evaporator2 Temp Temperature of the evaporator sensor2.							
"AuS"	AUX Temp. Temperature of the AUX sensor. invisible.							
"LLu"	Light level value Actual light level value from light sensor.							
"Pir"	Motion sensor state							
"att"	Raw Sair Temp							
"ESS"	External ECO switch state							
	Display messages							
"unP"	Device is unprogrammed (relay output is locked)							
"Prg"	Device has not finished programming (relay output is locked)							
"Eco"	Device is in Eco mode							
"SC"	Device is in pull-down mode (super-chill)							
"dEF"	Device is defrosting							
"HoL"	Device is in Holiday mode							

# Troubleshooting

Problem	Probable cause	Remedy		
Compressor does not start	Waiting for compressor delay timer Defrost in progress Line voltage to compressor too low or too high	Check CoP->CSt Check CoP ->Pot /Pod Check dEF ->dit, dot Check CoP->uLi, uLo, uHi		
Fan does not start	Door is open or door contact is defective	Fan stops when door is opened Check that door contact is ok		
Defrost does not start	Controller in pull down mode	Defrost might be delayed during pull down Check parameter Pud->Pdi		
Alarm does not sound	Alarm delayed	Check ALA->Htd, Abd Check Pud->Pdd		
Display brightness is weak	Ambient light sensor broken	Replace sensor		
Shift between ECO and normal mode does not happen on ambient light change	Ambient light sensor broken or light level not set properly	Check Eng->SLd, SLn		
Display alternates between condenser and temperature	Condenser too hot	Clean condenser Check Con ->CAL, CbL		
Display alternates between high and temperature	Temperature too high	Check ALA->HAt		
Display alternates between low and temperature	Temperature too low	Check ALA -> LAt		
Display shows " <i>dEf</i> "	Defrost in progress	Check diS ->SdF		

Alarm code	Trigger	Automatic clearance	Outputs	Comments	
"Hi"	Air temperature is higher than "ALA->Hat" for "ALA->Htd"	User configured	Blink "Hi" with the highest temperature; If configured: cut in alarm relay, beep the buzzer	High temperature alarm	
"Lo"	Air temperature is lower than " <i>LAt</i> " for " <i>Ltd</i> "			Low temperature alarm	
"Con"	Condenser temperature is too high or too low			Condenser alarm	
"dor"	Door open for more than "ALA -> dod"			Door open alarm	
"uHi"	Line voltage is higher than Always Blink " <i>uHi</i> ". If configured: cut in alarm relay, beep the buzzer " <i>Cop-&gt;uHi</i> "		High voltage alarm		
"uLi"	Line voltage is lower than "Cop->uLi"	5 7 7 1		Low voltage alarm	
"LEA"	Compressor continuous     Always     Blink "LEA". If configured: cut in "ILA->LEA"		Blink " <i>LEA</i> ". If configured: cut in alarm relay, beep the buzzer	Leakage alarm	
"E01"	"S1" error     Always     Blink "E01". If configured: cut in a		Blink "E01". If configured: cut in alarm relay, beep the buzzer	"S1" sensor failure (short or open)	
"E02"	"S2" error Always Blink " <i>E02</i> ". If configured: cut in alarm relay, beep the buzzer		"52" sensor failure (short or open)		
"E03"	"S3" error	error Always Blink " <i>E03</i> ". If configured: cut in alarm relay, beep the buzzer		"S3" sensor failure (short or open)	
"E04"	" "S4" error Always		Blink "E04". If configured: cut in alarm relay, beep the buzzer	"S4" sensor failure (short or open)	

# **Typical applications**

# Glass Door Merchandiser, No-frost freezer/sub-zero cooler

# 080G2019 **Glass Door Merchandiser**

3500 mm 6000 mm

## **Gastro No-frost freezer**

080G2019

6000 mm

# **Application Matrix**

ERC 112	Output			Input						
Application ERC type		D01	DO2	DO3	DO4	S1	S2	S3	<b>S4</b>	Di
Standard beverage cooler	ERC 112C	Comp	Fan	Lamp		Control	Defrost	Condenser or Ambient Light or Motion detection		Door or Motion detection
Sub-zero beverage cooler	ERC 112D	Comp	Heater	Fan	Lamp	Control	Defrost	Condenser or Ambient Light or Motion detection		Door or Motion detection
Out-door beverage cooler	ERC 112D	Comp	Heater	Fan	Lamp	Control	Condenser	Ambient Light or Motion detection		Door or Motion detection
Nofrost freezer w. glassdoor	ERC 112D	Comp	Heater	Fan	Lamp	Control	Evaporator	Condenser or Ambient Light or Motion detection		Door or Motion detection
CFF refrigerator	ERC 112C	Comp	Fan	Lamp		Control	Defrost	Condenser		Door
CFF freezer	ERC 112D	Comp	Heater	Fan	Lamp	Control	Defrost	Condenser		Door

S: connector position

NOTE:

Select only one function per input, e.g. condenser sensor or ambient light sensor.
Make sure that the accessory you select has a matching connector to the input, e.g. a sensor for input "S2" must have "S2" connector.

• Condenser sensor or light sensor are optional and can be omitted.

• Defrost sensor is mandatory when electrical heater is used for defrost. For natural defrost it can be omitted.

## **Sensor placement**

## **Control sensor**

#### **Control sensor**

#### **Evaporator sensor**

# **Condenser sensor**

The control sensor must always be connected and is used for controlling the cut-in and cut-out of the compressor according to the set point. The sensor is also used for the displayed temperature.

#### Vertical coolers with fan

Most common placement is in the return air to the evaporator. The sensor can be placed close to the fan – even when the fan is pulsed during compressor OFF periods: the updating of the temperature is blocked when the fan is stopped and only updated when the fan has been running for a while, so that the heat from the fan does not affect the temperature reading.

For applications sensitive to sub-zero temperatures, sensor placement in the evaporator outlet air can be considered.

#### Vertical freezers with fan

Placement in the return air or in the freezer compartment.

#### **Coolers without fan**

The best results are normally obtained when the sensor is placed at the side-wall, 10 cm from the back and approximately at 1/3 from the bottom or where the evaporator ends.

The control sensor must always be connected and is used for controlling the cut-in and cut-out of the compressor according to the set point. The sensor is also used for the displayed temperature.

The evaporator sensor is only used for de-icing of the evaporator and has no control purpose.

#### **Placement of sensor**

Place the sensor where the ice melts last. Please be aware of that sharp finns can damage the cable.

The condenser sensor is used to protect the compressor against high pressure when the condenser is blocked or the condenser fan fails.

#### **Condenser sensor**

Place the sensor at the liquid side of the condenser. Use a metal bracket or metal tape to ensure good thermal conductivity. Be sure that the cable does not pass hot spots at the compressor or condenser that exceeds 80°C.

## **Ambient light sensor**

**Door sensor** 

The ambient light sensor is used to detect opening hours of the shop.

#### Placement of sensor

The sensor must be placed so that the interior light does not affect the sensor. Possible placement could be in the front of the cooler or at the top.

The door sensor is used to detect buying activity and to stop the fan when the door is opened.

#### Door sensor

Danfoss does not supply the door-switch. Use the door-switch you have and connect it to the cable supplied by Danfoss.
