JS1 Heavy Duty Joysticks

Mobile Machine Management

The JS1 Heavy Duty Joysticks (JS1-H) portfolio is a modular joystick design that allows complete grip and base configuration for efficient control of any machine. The heavy duty design will result in extended life for years of reliable operation.

Five different heavy duty grips can be paired with the JS1-H base to offer the operator complete comfort. Each of the grips can be configured with a comprehensive portfolio of finger functions for true customization.

The JS1-H base incorporates proven Danfoss design elements and builds on the PLUS+1® architecture. Several options are available for the electrical and mechanical output so the joystick can be tailored for a positive human machine interaction. The JS1-H base is designed to be dependable and reliable for the extreme and harsh conditions of the mobile machine environment.
