

DHP-AQ – Schematics

The following schematics refer to models:

DHP-AQ Mini

DHP-AQ Midi

DHP-AQ Maxi

Control engineering – Master/Slave

When using master/slave in a system with a hot water tank and/or pool, the division is as follows:

1. The master and the slave operate for the heating/cooling system
2. The master heat pump operates for the pool.
3. The slave operates for the hot water tank.

MINI

MIDI

MAXI

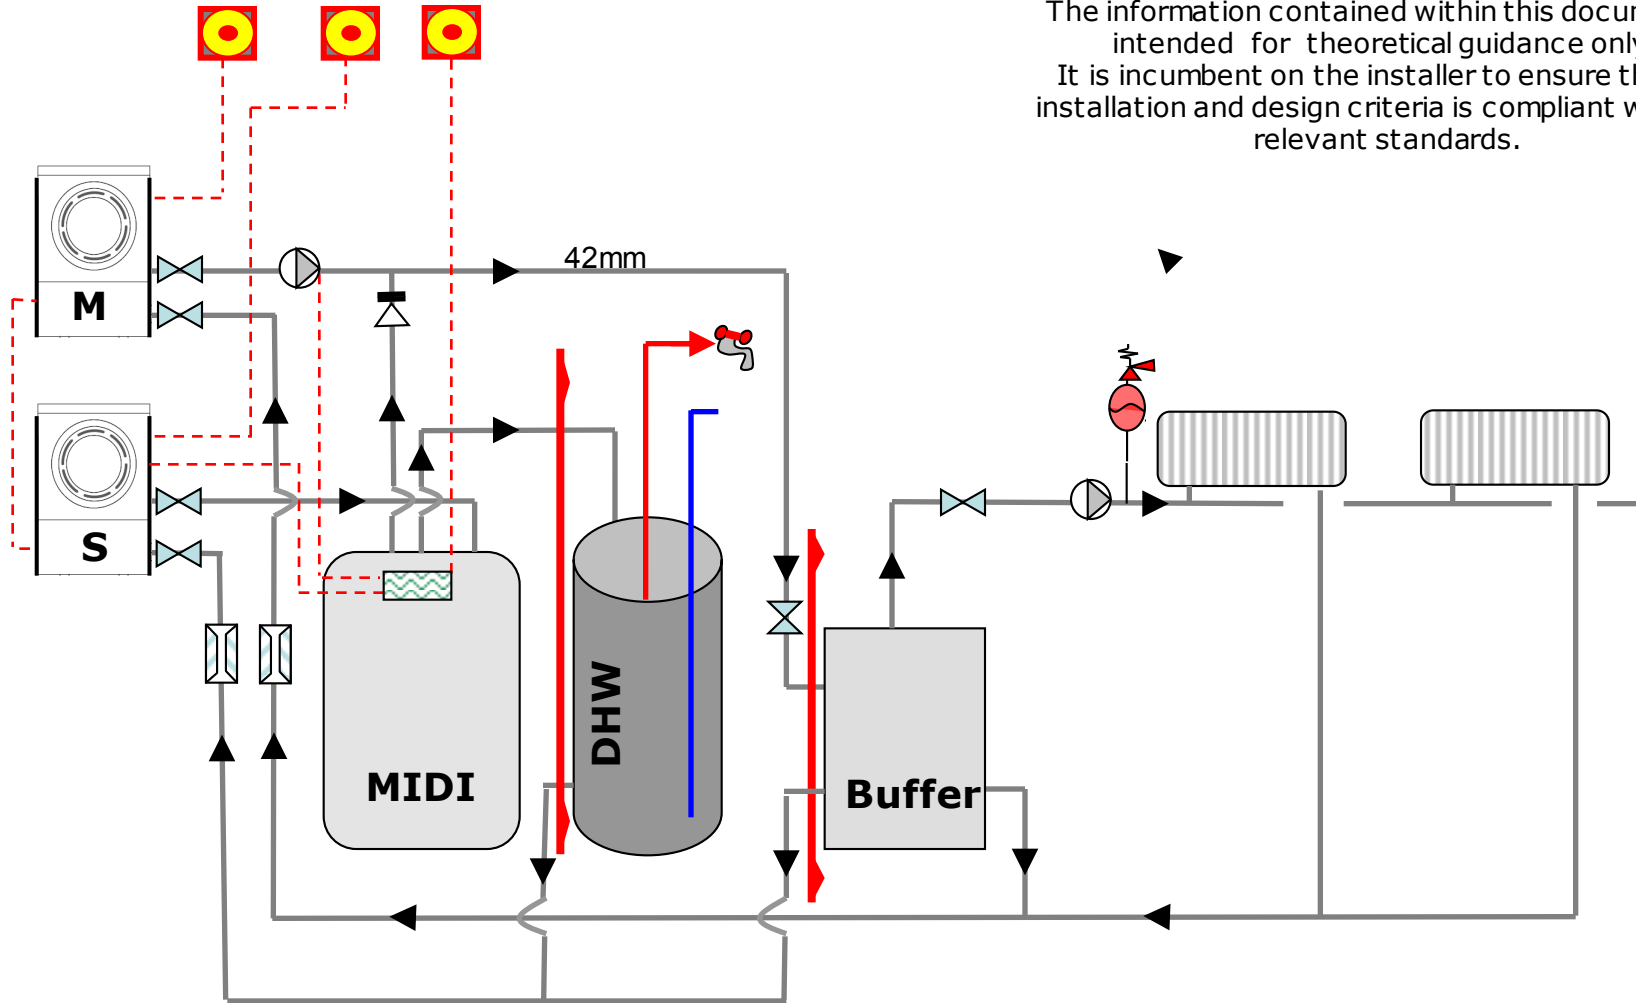

2x DHP-AQ (MIDI) M/S Htg & DHW

Please note!

011-0001/Q.B

The information contained within this document is intended for theoretical guidance only. It is incumbent on the installer to ensure that all installation and design criteria is compliant with the relevant standards.

* Heating circuit must be frost protected and treated in accordance with BS 7593

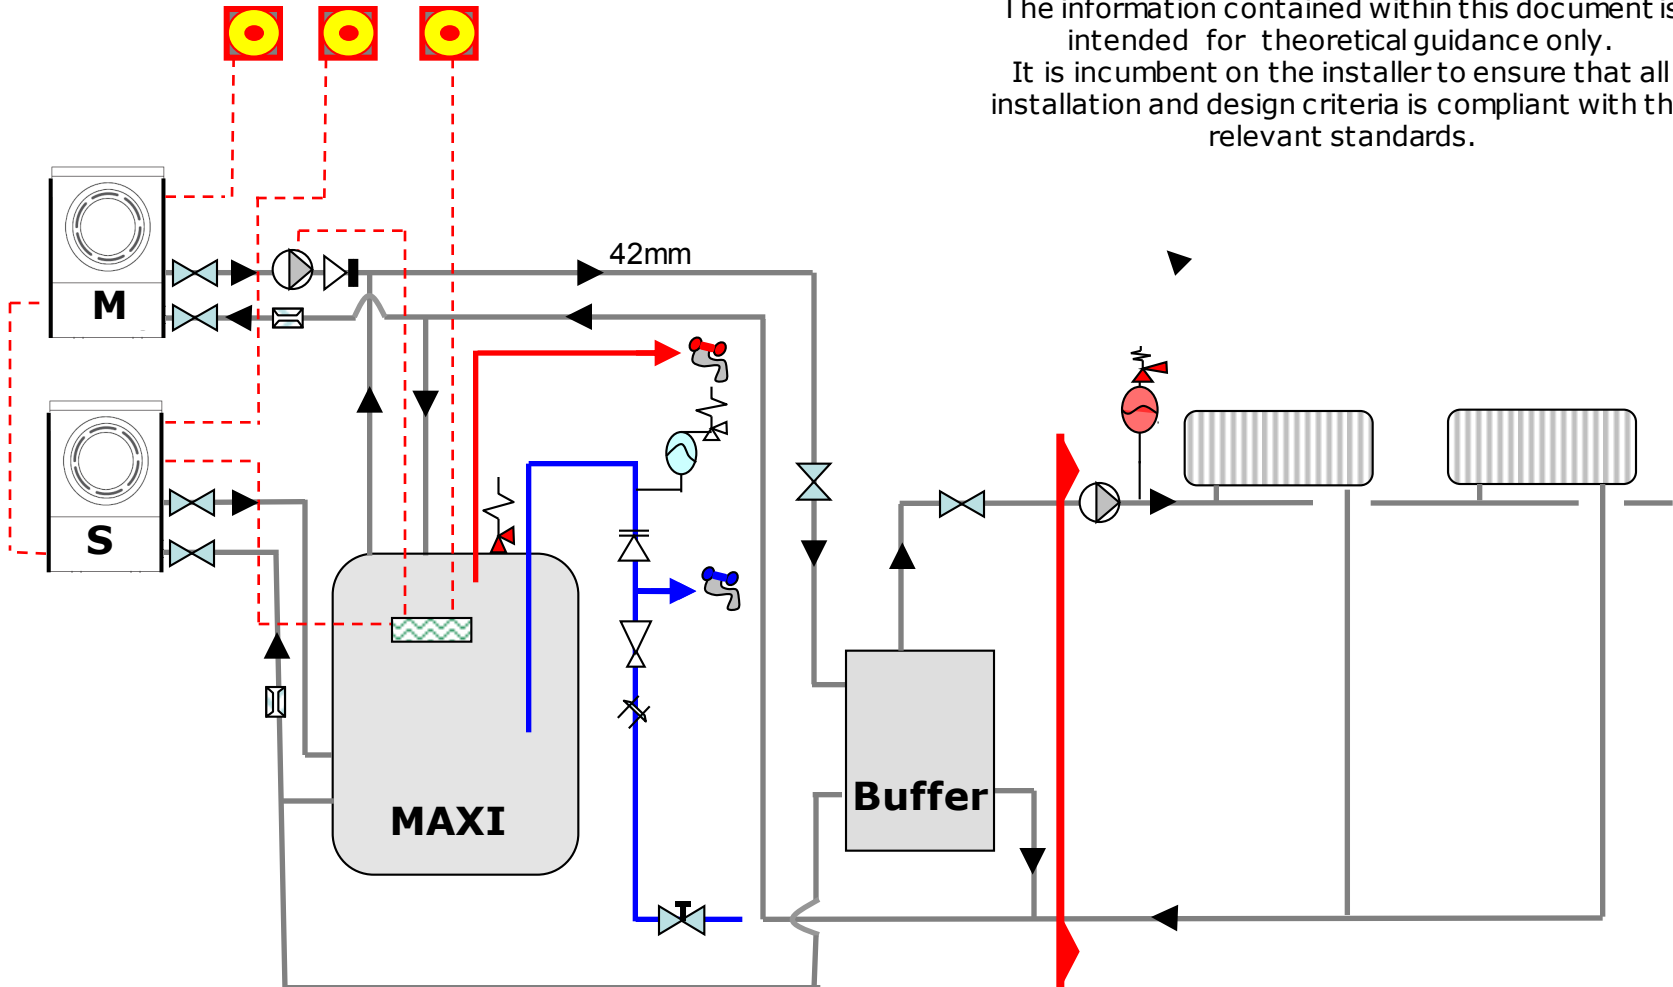

2x DHP-AQ (MAXI) M/S Htg & DHW

Please note!

011-0002/Q.B

The information contained within this document is intended for theoretical guidance only. It is incumbent on the installer to ensure that all installation and design criteria is compliant with the relevant standards.

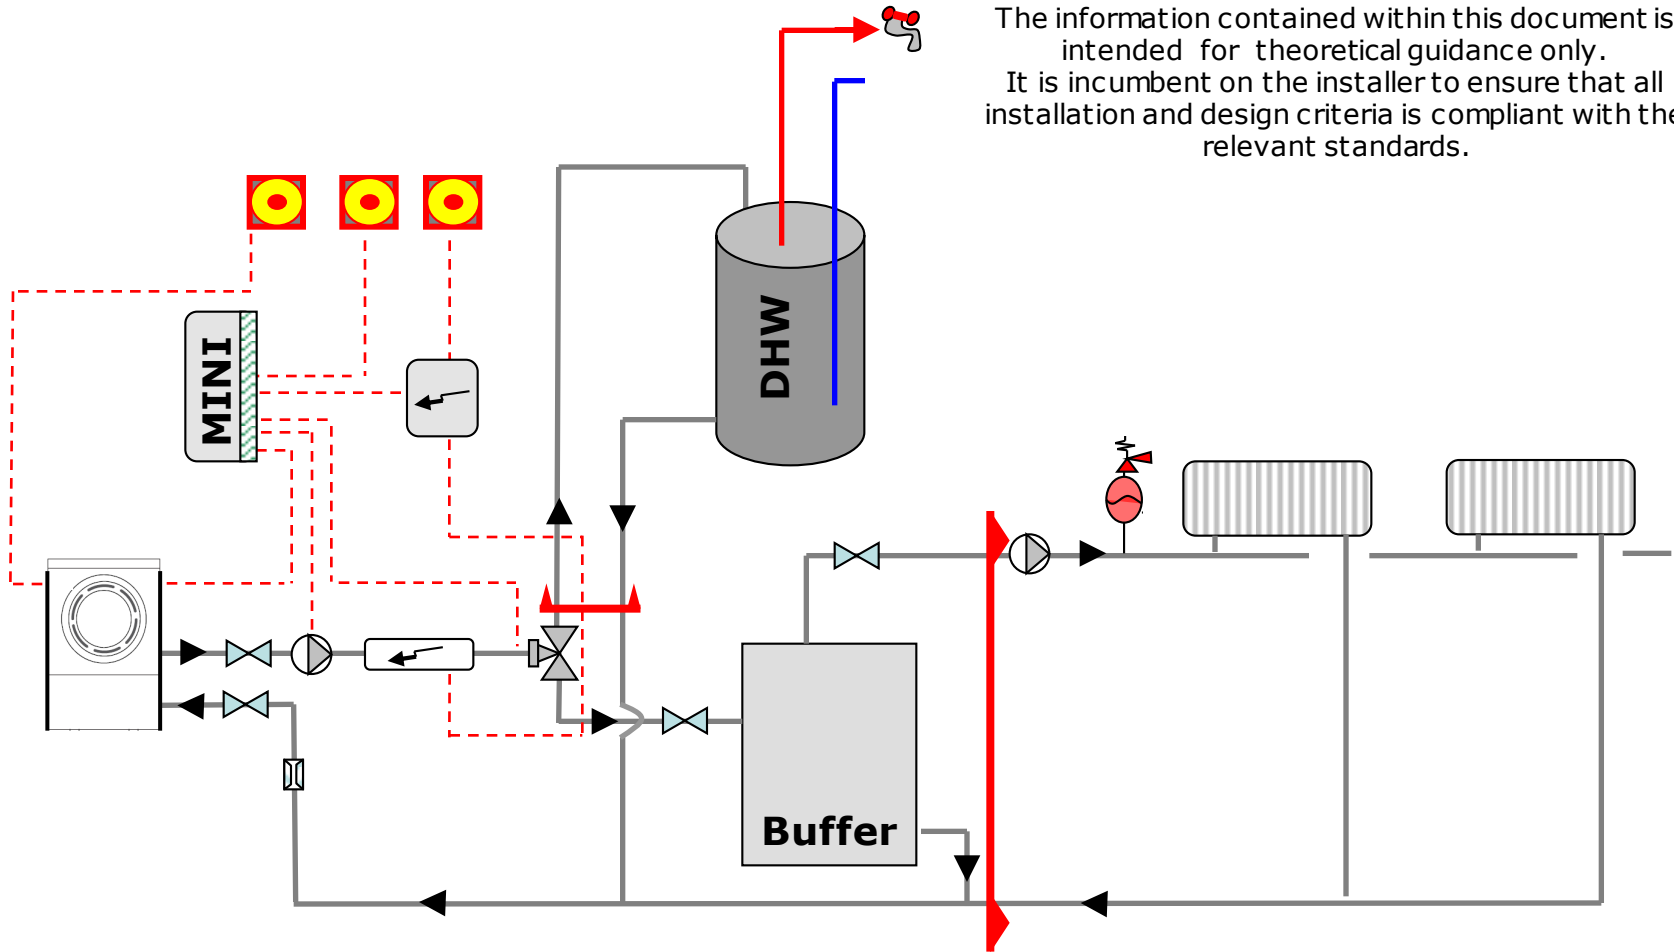

* Heating circuit must be frost protected and treated in accordance with BS 7593

DHP-AQ (MINI) Htg & DHW

Please note!

011-0004/Q.B

The information contained within this document is intended for theoretical guidance only. It is incumbent on the installer to ensure that all installation and design criteria is compliant with the relevant standards.

* Heating circuit must be frost protected and treated in accordance with BS 7593

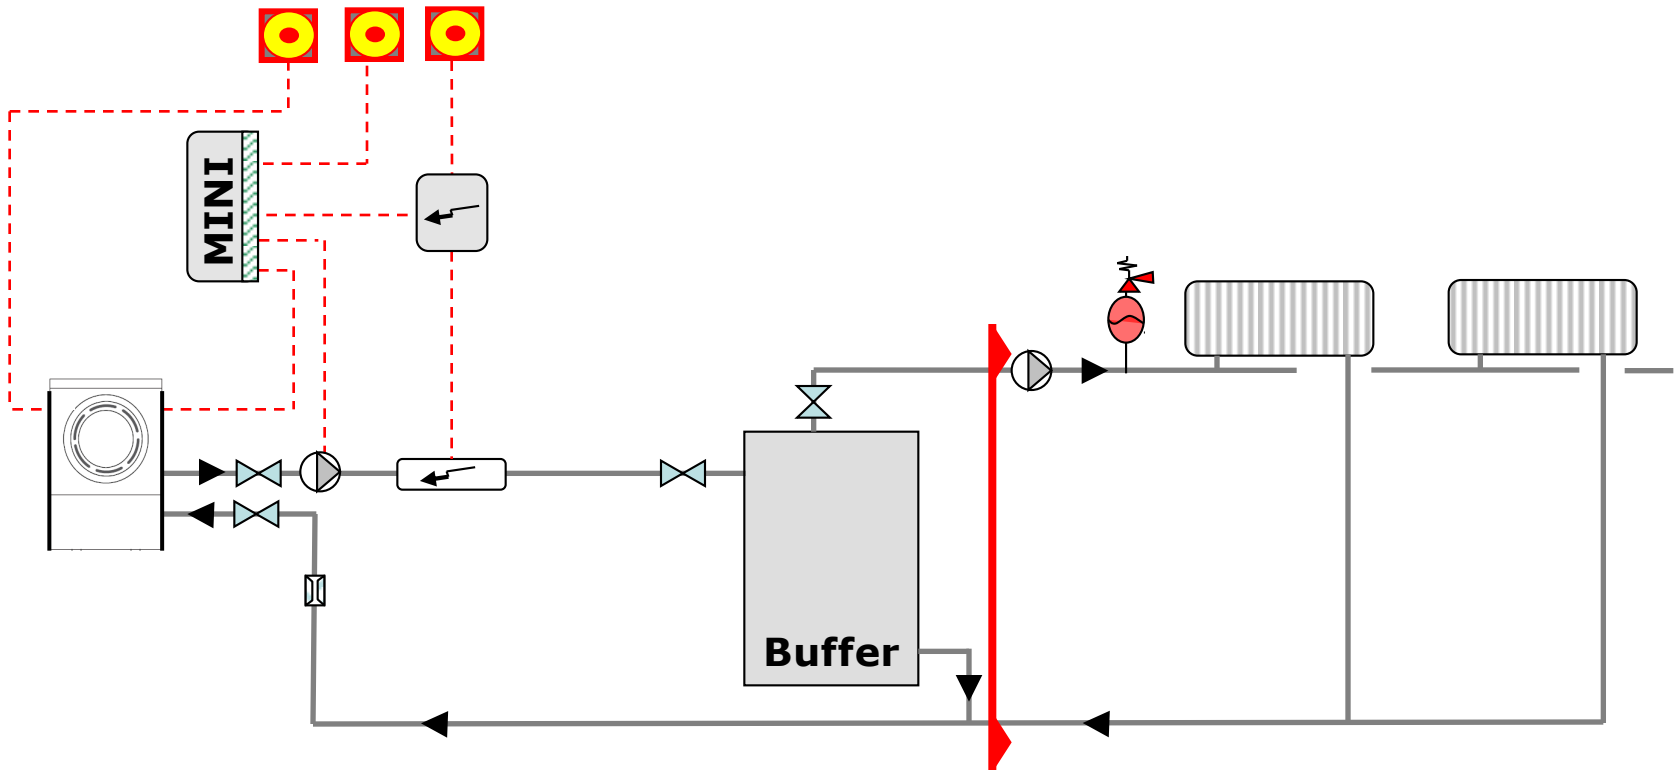

DHP-AQ (MINI) Htg only

Please note!

011-0006/Q.B

The information contained within this document is intended for theoretical guidance only. It is incumbent on the installer to ensure that all installation and design criteria is compliant with the relevant standards.

* Heating circuit must be frost protected and treated in accordance with BS 7593

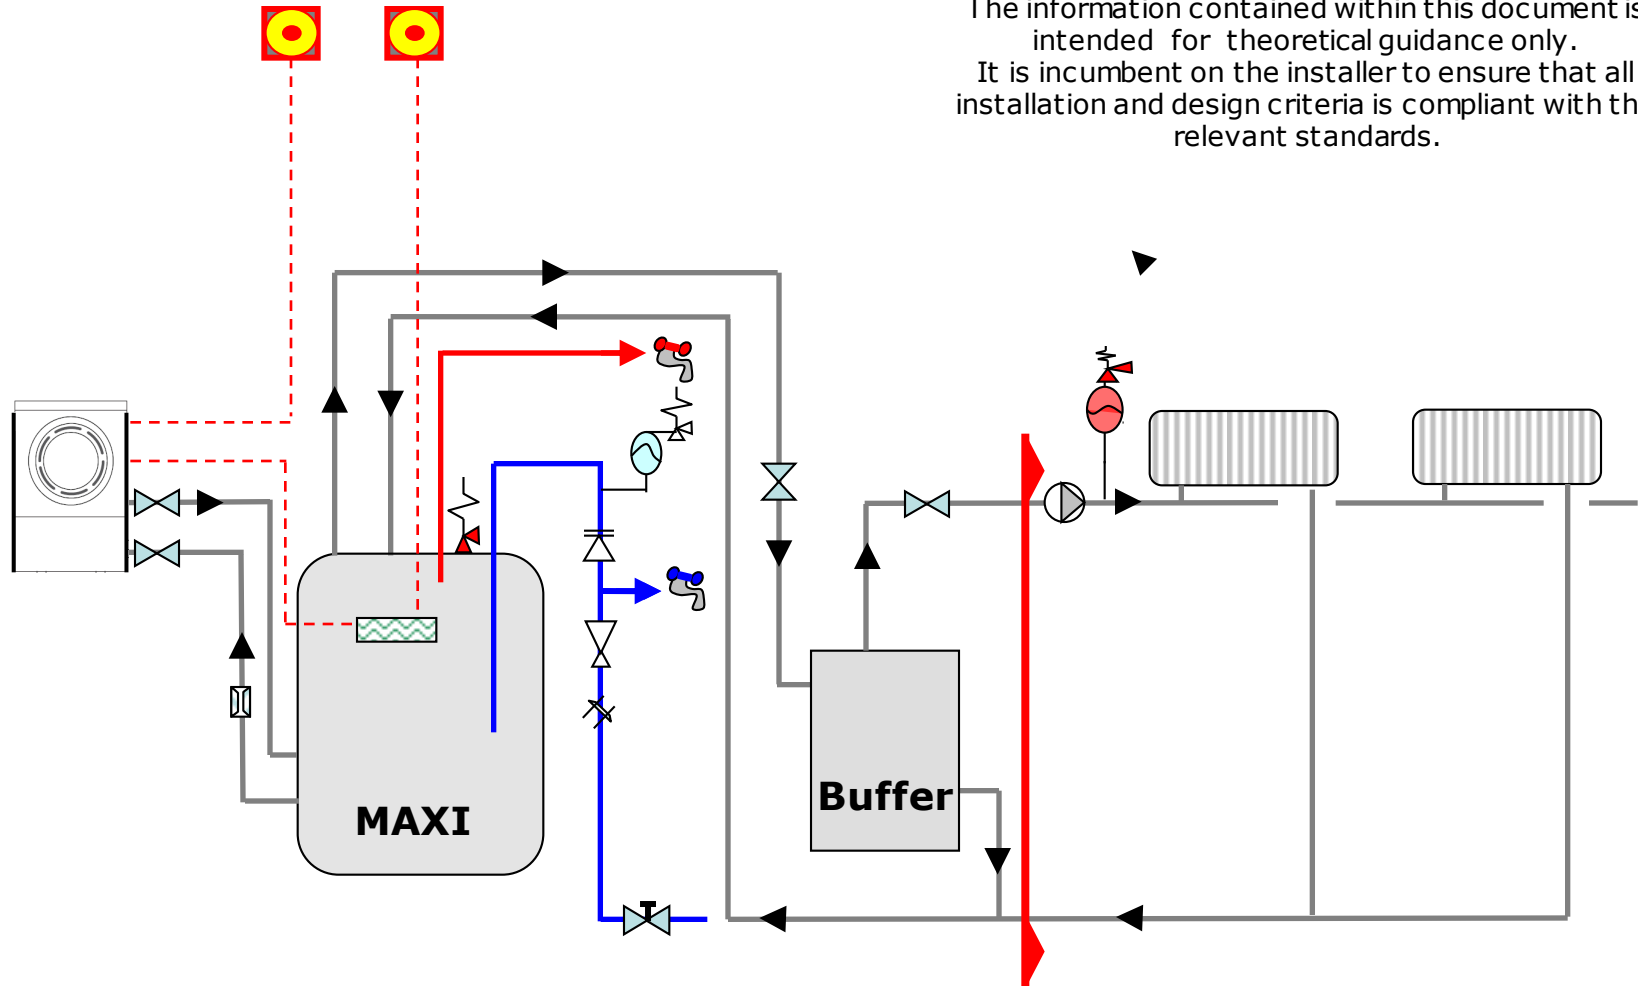

DHP-AQ (MAXI) Htg & DHW

Please note!

011-0007/Q.B

The information contained within this document is intended for theoretical guidance only. It is incumbent on the installer to ensure that all installation and design criteria is compliant with the relevant standards.

* Heating circuit must be frost protected and treated in accordance with BS 7593

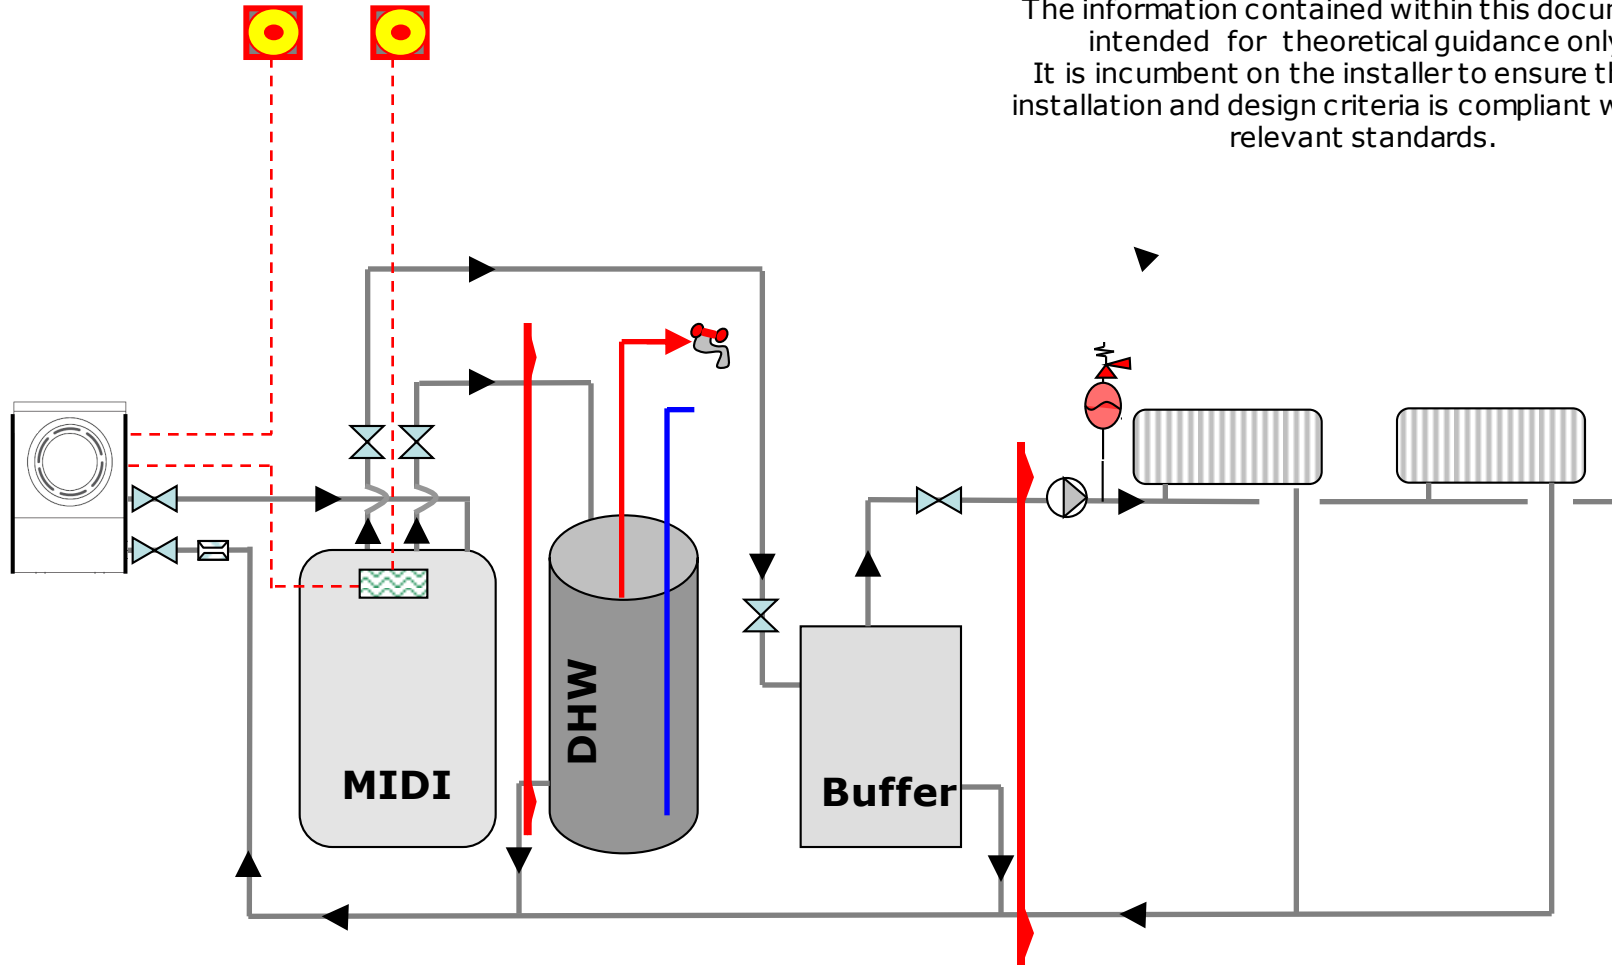

DHP-AQ (MIDI) Htg & DHW

Please note!

011-0008/Q.B

The information contained within this document is intended for theoretical guidance only. It is incumbent on the installer to ensure that all installation and design criteria is compliant with the relevant standards.

* Heating circuit must be frost protected and treated in accordance with BS 7593

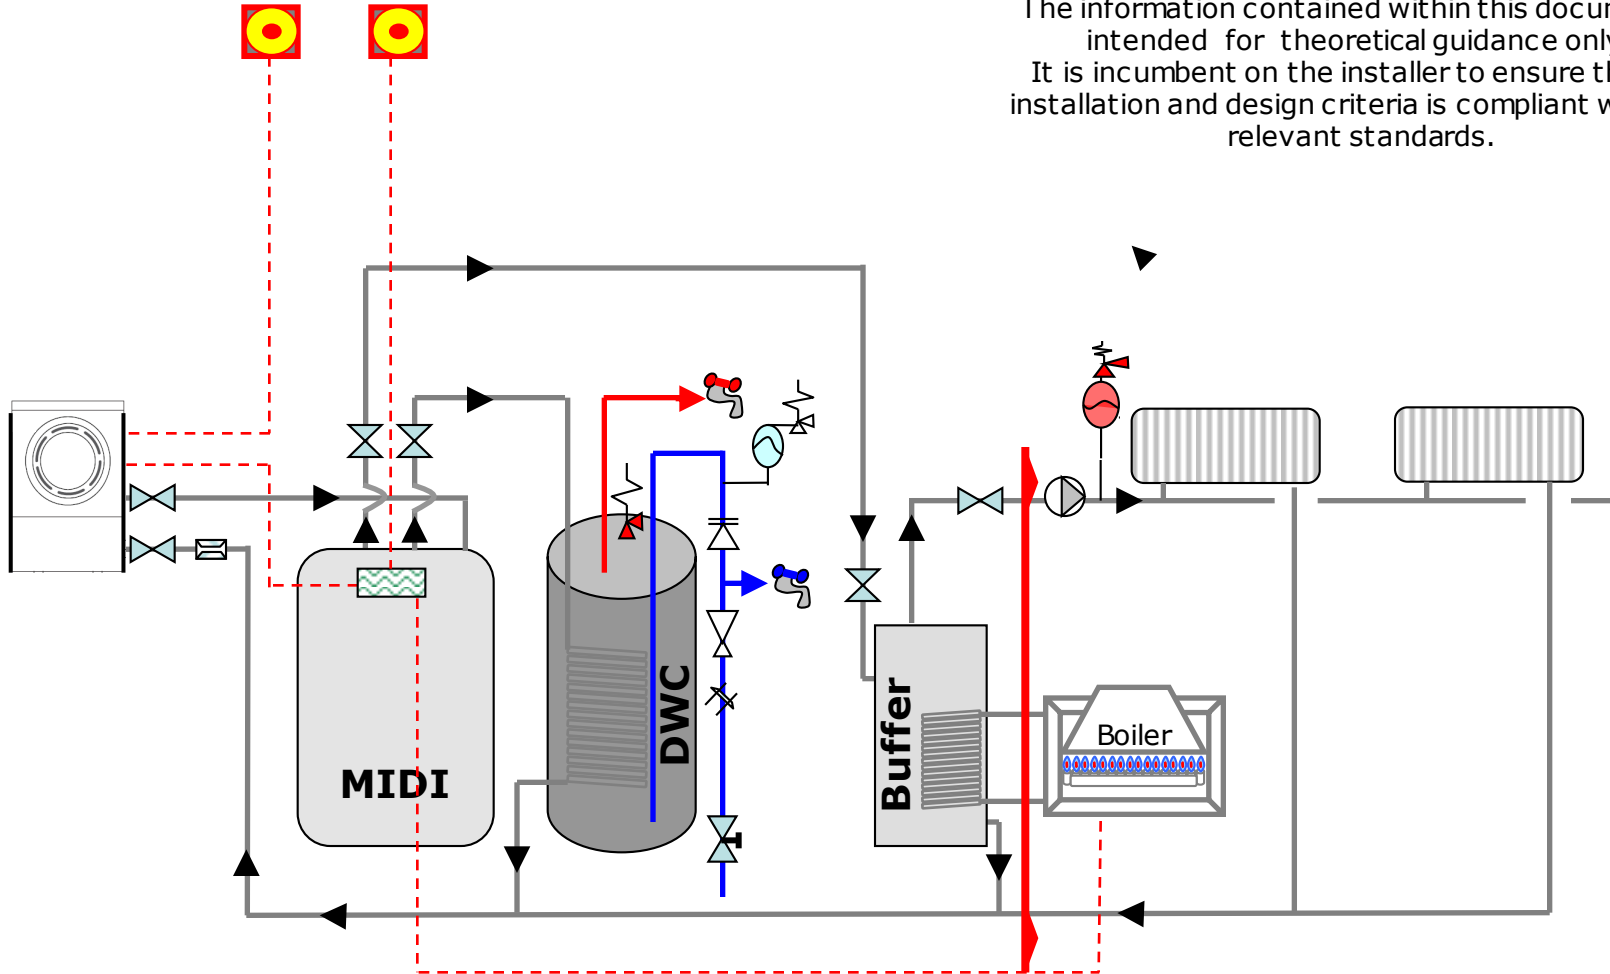

DHP-AQ (MIDI) DWC & boiler

Please note!

011-0009/Q.B

The information contained within this document is intended for theoretical guidance only. It is incumbent on the installer to ensure that all installation and design criteria is compliant with the relevant standards.

* Heating circuit must be frost protected and treated in accordance with BS 7593

Legend

| | | | |
|--|-------------------------------------|--|---------------------------|
| | IP65 isolator | | CW stop tap |
| | Auxilliary heat control | | CW outlets |
| | Electrical wiring | | DHW outlets |
| | Motor Exchange valve | | Potable expansion and PRV |
| | Auxilliary heater | | CW non-return valve |
| | Circulation pump (Class A) | | Balanced CW |
| | Isolation valve | | Pressure reducing valve |
| | Primary expansion & PRV | | CW strainer |
| | Filter | | Flow direction |
| | Temperature & pressure relief valve | | Danfoss boundary |
